New staff hiring slips under state spending freeze

By SHARYN SEARS
Staff Writer

A spending freeze imposed by Gov. Edmund G. Brown, Jr., earlier this month has left faculty hiring and other spending in a deadlock, Cal Poly's director of business affairs said Tuesday.

James Landreth responded to the order by submitting the names of people scheduled to teach classes Spring Quarter before the freeze. The names were accepted and subsequently the positions were filled.

Had the faculty names submitted by Landreth been rejected, it would have resulted in the cancellation of 22 class sections scheduled for this Spring.

Currently no sections at Cal Poly have been cancelled as a result of the hiring freeze and it is tentatively scheduled to be lifted July 1, 1982, Landreth said.

Other areas affected by the spending freeze are the purchase of office furniture, equipment, office machines, office supplies, and consultant and personal service contracts.

Consultant and personal service contracts are defined as those contracts whose principal product is advice, a recommended course of action, or personal expertise, according to a memo issued by the governor to the business office.

The memo further defined personal expertise as including training, workshops, research, public relations, and testing services.

Landreth said the freeze also prohibits hiring any new student assistants.

A freeze has been placed on the hiring of substitutes to fill any staff positions should the regular staff member become ill or no longer able to work, according to Landreth.

The freeze applies to "all funds" said Landreth, which includes general spending, housing, parking, extended education and reimbursed activities.

Fraternity challenges legality of complaint policy

BY MAURA THURMAN
Staff Writer

A conflict between the San Luis Obispo City Planning Commission and Lambda Chi Alpha fraternity over use permit amendments should be resolved this week, said acting city planning director Geoffrey Grote.

A letter received by the city challenged the legality of amendments passed by the commission without the fraternity's consent, Grote said.

The letter from John Jenkins, Lambda Chi Alpha's legal representative, specifically appeared to challenge the commission's newly adopted policy of referring citizen complaints about fraternities to the Interfraternity Council and ASI for comment, Grote said.

Jeff Witous, president of Lambda Chi Alpha, said the

letter was intended to protest an amendment allowing planning commission review of use permits whenever "reasonable written citizen or Police Department complaints" are received.

Technical problem

"It's really a technical problem with the wording of the permit," Witous said.

"They're mainly concerned with the words, that they technically allow the commission to consider revoking the permit after any written complaint about the fraternity," said Tim Leets, Interfraternity Council president.

The intent of the commission, Leets said, is to provide for reviewing a permit if a series of complaints is received. "We have no complaints with the new referral process,"

Witous said.

Commissioners added a similar clause providing review after written citizen or police complaints to permit held by Alpha Upsilon for their house at 1 Palm St.

Two of the fraternity's neighbors have complained late-night parties and noise at the house since the group appeared before the commission Jan. 13.

Continuing complaints could lead the planning commission to consider revoking the group's permit, commissioners warned.

The commission's 5-0 vote also brought the group under the new policy, allowing complaints to be referred to the Cal Poly committee for comment and possible action.

Its prominent domes remain unchanged, but Diablo Canyon's foundation will be altered. Pacific Gas and Electric Co. hired Bechtel Power Corp. to manage the completion of Diablo Canyon.

Bechtel to manage Diablo completion

By SHARON REZAK

Staff Writer

Pacific Gas and Electric Co. hired Bechtel Power Corp., the nation's largest nuclear plant engineering firm, to "manage the completion" of the Diablo Canyon project so the plant can obtain its full-power license, according to a Bechtel representative.

Larry Thomas, of San Francisco-based Bechtel said the public utility asked Bechtel March 22 to "assume responsibility" and help resolve the plant's flaws and design errors.

According to Thomas, Bechtel will be working with PG&E to meet safety criteria set up by the Nuclear Regulatory Commission. Thomas said the engineering firm will do four things:

- restore the low-power license to Unit 1 of the plant which was revoked by the NRC because of seismic design errors.
- obtain a full-power operating license for the entire plant.
- oversee construction of Unit 2, which is now 80 percent completed.
- ensure both units are completed and free of errors.

Poly Fire Department to train medical technicians

By MAURA THURMAN
Staff Writer

While an emergency medical training program for the county remains undecided, Cal Poly's fire department has taken steps to improve its emergency medical services.

Carmon Johnson, Cal Poly's fire chief, said most of his student firefighters will be certified EMT-I's (Emergency Medical Technicians, Level I) in April, at the same training level as county ambulance attendants.

County officials, meanwhile, continue

to feud over what level of training emergency workers should receive, and who should receive it.

The newly established county Emergency Medical Services Agency will decide whether ambulance attendants or firefighters will train, and whether they will become EMT-I's or more advanced paramedics.

"The bottom line is patient care," Johnson said. "The issue has become political, and people have forgotten about their real purpose—to care for the patient."

To give Cal Poly patients better care, Johnson began to arrange emergency medical training for his student employees four years ago.

"We try to help them with hours off, or money," Johnson said. "We really want them to become the best they can."

Students attend training sessions at Cuesta College that are taught by Johnson's wife, Sally.

"She really pushes them," Johnson said. "She's dynamic. I'd say they know more than most EMT-I's, when she finishes with them."

First-level trainees receive about 85-100 hours of instruction, and the second level includes an additional 60-100 hours. Paramedics are most advanced, completing a course which averages 1,250 hours.

"Proper patient assessment" is the main skill provided by EMT-I training.

"We don't do medical diagnoses, we do expert evaluation," he said. "We don't administer any drugs, but we're not first-aiders, either."

As it now stands, Johnson said ambulance service is used only for transportation, because Cal Poly employees have training similar to ambulance attendants.

"If they were EMT-I's," he said, "they could pick up where our services leave off. It would give the patient much better service."

County emergency service personnel could never replace Cal Poly's crew.

"Our biggest advantage is that we can be there so quick," Johnson said. "We can be anywhere on campus in two minutes."

He likened Cal Poly to a small city, and said he is proud that campus emergency services are now comparable to those of any community of similar size.

"Four years ago, we had a real identity crisis," Johnson said. "I'm glad to say now that we could handle probably 40-50 (injured) people at once."

The university recently gave the emergency training program a vote of confidence, Johnson said, by allocating money to outfit each truck with emergency medical equipment.

Psychotherapy expert to speak

A nationally recognized specialist in psychotherapy and addiction control will speak at 11 a.m. on Thursday, April 1, in Chumash Auditorium.

Dr. Nicholas Cummings, who was president of the American Psychological Association during 1979-80, will discuss an innovative therapeutic mode known as brief/discontinuous therapy. Admission will be free.

Dr. Cummings is known for his innovations in psychology. Over 20 years ago, he wrote the first comprehensive prepaid mental health insurance coverage and demonstrated its effectiveness.

His appearance schedule in San Luis Obispo County is being sponsored by Cal Poly's Student Affairs Division, Education Department, and Psychology Department; as well as by the Atascadero State Hospital and the San Luis Obispo County Psychological Association.

Dr. Nicholas Cummings

Careers That Help The World Communicate.

*We'll Be On Campus
Wednesday
April 7*

Telecommunications is rapidly changing the way we work and live. With a 40 year history of leadership in the field, GTE Lenkurt is the perfect place to launch your career.

Our products make possible voice, data, and video transmission using diverse

technologies such as fiber optics and microprocessor-based multiplex systems. At GTE Lenkurt, you'll find engineers from just about every discipline, data processing specialists, marketing analysts, accountants, chemists, human resource specialists and many others.

Join Us—

We're always looking for more talented people who want to help the world communicate. We offer many educational and training benefits, as well as excellent starting salaries and personnel care benefits. Talk to the GTE Lenkurt representative while we're on campus. Or write to GTE Lenkurt, College Relations, 1105 County Road, San Carlos, CA 94070. We are an equal opportunity affirmative action employer.

Deep in the Mines of Cal Poly, students forge art

Hiss of torches, clang of hammers

Story by Shawn Turner

Photos by David Middlecamp

*And metal wrought like fishes' mail,
Buckler and corslet, axe and sword,
And shining spears were laid in hoard.
—from "Song of Durin,"
The Lord of the Rings*

Something is emerging from Jack Tittiger's otherwise perfect creation, something round and blood red, breaking through the smooth brass surface.

It looks like an H.G. Wells horror classic in miniature, as if the two intrusive globes were not something Tittiger intended.

But they were.

In fact, Tittiger put them there, on a belt buckle, as the main components to a final project Winter Quarter in a metalsmithing class—one of four offered at Cal Poly.

Clarissa Hewitt teaches all four classes. She has been at Cal Poly for six years, and her art career in metals has taken her as far as Europe to study.

The students call her Crissa.

"Metalsmithing has been around for centuries, and it's important for students to get a perspective on that," said Hewitt. "That's what these classes are designed to do."

In order to convey the trade's heritage—Hewitt will tell you it's not just a craft—the classes are open to all students. But one thing has helped keep that message from getting out too far—just where are the classes?

No even the whoosh of acetylene torches and the constant noise of hammer blows could give their locations away. For far above student traffic on an upper floor of Engineering West, the

classes sit, making them almost as hidden as the Dwarf Mines in J.R.R. Tolkien's *The Lord of the Rings* trilogy.

But just as exquisite was the work of Dwarves and Elves in that mythical story, so are the products from the metalsmithing 255, the beginners' class—but not like beginning crafts classes in high school, in which everyone makes ashtrays or footstools.

Students ask Hewitt for help not on such basic projects, but on more complex things like delicately curving earrings or elaborate bracelets or dramatic objects such as Tittiger's belt buckle.

Much of the freedom for this kind of artistic creativity comes from Hewitt's teaching style, said Animal Science Major Pam Lees. Wood and stone inlays decorate her final project, a belt buckle.

"The craft classes are a relief from all the classes a student has to take," said Lees. "This allows your creativity to flow, and Crissa is a fair instructor, very open-minded."

Lees and the students spent about seven hours a week in the class, and the time requirement doesn't change much from one class level to another, just the type of work—from small works in 255, to etching and casting techniques in 355 and 356, to advanced techniques in 455.

At the senior level is where the fun begins, the students using earlier techniques, and an additional one, to create a practical object that looks like a piece of art—in this case, bells and chalises.

That additional technique is called raising—shaping a flat circle of metal in-

Yvonne Carlson checks the progress of planishing techniques on her silver bracelet—a process requiring thousands of hammer blows and a lot of patience.

Professor Clarissa Hewitt shows Jan Elder how to flute a copper bowl to look like a garlic bulb. But the bowl has gone through quite a change so far—it started out as a smooth plate.

to a rounded bowl with hammer blows.

If you're counting, that's more than 50,000 hammer blows.

"It's an amazing process," said Yvonne Carlson, a senior Applied Art and Design major with a craft option. "It's hard to believe that you can get a rounded bowl from a flat sheet of metal."

"I'm even more amazed that it took an entire quarter," said Carol Goodlad, also a senior in Applied Art and Design with a craft option.

Both said it was the first time they had raised an object before—their works, as well as those of other students, are on display in the Communicative Arts and Humanities office—and they described it as rewarding, but time-consuming.

"Yes, it's very time consuming, and that appeals to some, but not to others," said Hewitt. "If you're one who likes to work meticulously, then metalsmithing is a good class. Clay, on the other hand, manipulates very easily."

Hewitt said patience could pay off—the owners of the Gold Concept in San Luis Obispo received their training in Cal Poly metalsmithing classes, and there are craft fairs throughout the Western United States.

But just because metalsmithing hasn't received much recognition, stuck way up there in Engineering West, Hewitt hastened to point out that metalsmithing is not the only craft class the Art department offers—there are also classes in ceramics, woods and glassforming.

Carol Goodlad's bell displayed in Dean Ericson's office.

Art student's project will rock a'bye baby

By SHAWN TURNER

Staff Writer

Some infant will sleep in a one-of-a-kind bed when Carol Goodlad sells her senior project—not only a useful cradle but also a work of art.

Goodlad worked all of Winter Quarter on the cradle, and this week sands it for the last time and finishes it—the ticket to her June graduation with a degree in Applied Art and Design with a craft option.

But it is an unusual ticket out, for this is no traditional cradle—certainly nothing like the one you're thinking of now. This one is tall and sturdy, built of red oak, and the baby's cradle swings like a pendulum from two supports.

The infant's bed itself is big and wide, the ribs curving out, making it look a little like the unfinished hull of a boat.

The cradle is warm and alluring—something you would want to push and rock but it is also strong, as Goodlad showed in pointing out details, tossing the cradle and turning it and setting it down hard on the Crafts Center floor.

"Oh, yeah, it's sturdy," said Goodlad, laughing. "If we have an earthquake, in there is where I want to be." She pointed to the cradle.

Actually, her work on the project began last year when, to see if she could even make a cradle, she built a model one-fourth the size of the final product. With just a few adjustments, the model and the project are the same.

But the senior project did not stop at the cradle. In ad-

dition to the 129 hours of work and \$200 worth of materials put into it, Goodlad wrote a proposal for the cradle, including research on cradles, what worked, what didn't, and whether something like this can be built in factories.

Her conclusion, even before she began the report—factories couldn't make it, at least not the way Goodlad made it.

The Goodlad Method required a great deal of time, for sanding and shaping and glueing and especially for using unfamiliar tools and techniques.

She felt along the grooves of the two arms of her cradle. "I did these with a lathe. I never lathed anything before in my life."

"A lot of the time I used was in inexperience," she added. "You know, just sitting around trying to figure out

how to do something."

Understandably, the research for such a project was as unfamiliar as some of the tools, and while it wasn't really scientific, it was interesting.

"I figured out the height of the average woman, and how high the cradle should be in proportion to that, and then the size of the infant at birth, those sorts of things, because an infant would only be in it for five months," she said.

Goodlad also had to consider government safety regulations such as how far apart the cradle's ribs should be and how to secure the cradle from rocking.

"As far as fireproofing, I couldn't do anything about that," said Goodlad. "Unfortunately, wood is not fireproof."

After she completes the cradle and Goodlad receives a grade for it—the grader, Art Professor Clarissa Hewitt, has seen the project grow from slabs of wood—she would like to sell it, possibly at Poly Royal.

The selling price, considering the materials and time—possibly \$800.

All of which isn't bad for a woman who came to Cal Poly with little art experience and less knowledge of the crafts available. But now that she knows, Goodlad said she would eventually like to run her own woodshop.

The cradle, she said, is a stepping stone to such a career.

DDT down, falcon up

Peregrine falcons and brown pelicans can breathe a sign of relief—their numbers have increased in the ten years since the pesticide DDT has been banned.

That report comes from U.S. Fish and Wildlife Service researchers, who have learned that the traces chemical residues of DDT in the wild is less frequent.

The pesticide was banned for use in the United States in 1972, after scientists found evidence of harmful effects to some bird species.

Much of that harm had to do with reproductive failure—a breakdown of DDT causes eggshell thinning, making eggs too fragile for parents to sit on.

The pesticide becomes concentrated the higher it goes in the food chain, and that has decimated populations of bald eagles and peregrine falcons in the 1950s and 1960s.

For the peregrine falcon, one pair of which lives on Morro Rock, that meant near extinction.

Cal Poly librarian Fred Genthner dies

By CINDY BLANKENBURG
Staff Writer

A 30-year Cal Poly employee, Frederick Ludwig Genthner, Jr. died at age 63 in a San Luis Obispo hospital last Wednesday leaving behind a lot of memorabilia.

Genthner was "genuinely dedicated to preserving Cal Poly's history," co-worker in the Robert Kennedy Library, Dottie Stechman said, adding he helped to expand what is now the archives department.

Genthner who was head of special collections for the Walter F. Dexter Library, was honored as grand marshal of the Cal Poly Homecoming parade in 1975.

According to Roland Yates, chairman of the 1975 Homecoming committee, Genthner was chosen grand marshal because of the assistance he had provided to homecoming committee members when historical research was needed for the homecoming activities.

Genthner had been on Cal Poly's staff since 1952. Prior to that, he served in the Camp Callan (Ca.) Army Base library, was assistant librarian at Ohio State University and was periodicals librarian at Ball State Teachers College in Indiana.

Genthner graduated from Ohio Wesleyan University, attended George Peabody College for Teachers Library School in Tennessee and the University of Michigan Library School, where he earned his master's of arts degree in library science.

In 1975, Genthner wrote a two-volume manuscript on the history of Cal Poly from 1901-1975. According to an Oct. 24, 1975 article in the *Mustang Daily*, the book included 60 obits, 40 biographical sketches and 500 mini-biographical sketches written by Genthner.

Genthner said in that article, "I don't plan ever to

retire; I'm planning my life past 65. If my body will keep up with my mind, I'll be all right."

Genthner was associate member of the Cal Poly Associated Students, Inc.; Cal Poly Alumni Association; University of Michigan Alumni; American Society of Archives; Lodge 322, San Luis Obispo, Benevolent and Protective Order of Elks; Delaware Lodge 46, Free and Accepted Masons at Muncie, Indiana and the San Luis Obispo Historical Society.

Genthner appeared in *Who's Who in the West* and Biographical Publishing Company's *Outstanding Americans*.

He was named in Men of Achievement, according to the Cal Poly Report, March 9, 1973.

In addition, Genthner was a musician. He played in concert, symphonic, marching and contest bands along with his college dance orchestra. He was also a member of both college and church choirs.

In August 1981, Genthner compiled "Stress: A Selected Bibliography" which was the sixth in a series of bibliographies at the Cal Poly library.

The bibliography was an updated list of library material dealing with stress which he first compiled in 1977 for a seminar held at Cal Poly.

Born January 19, 1919 in Delaware, Ohio, Genthner is survived by his wife Loretta; a daughter, Joan Kahn of Avila Beach; a son, Lee, of Cambria; two stepsons, Walter Doss of Missouri and Page Doss of Connecticut; one sister, Elizabeth Wheeler of Delaware, Ohio; a granddaughter and four stepgrandchildren.

Services were held Friday at Mt. Carmel Lutheran Church. Masonic graveside services were held at Hazelwood Cemetery in Springfield, Missouri.

Cal Poly librarian Fred Genthner

Bradbury urges audience to let dreams be guide

By JUDY LUTZ
Staff Writer

The hero wakes up in the artificial night of his spaceship and turns to a robot of George Bernard Shaw. In the utter silence of deep space, the artificial man explains humanity to the living human.

"What are we in this long night of man?" the robot asks. The narrator tells his audience, "We are matter and force making ourselves over through imagination and will. You could dream the factories, harvests, buildings of the world, but if you don't act, what use the dream?"

The narrator is Ray Bradbury, but this time his audience isn't one reader feasting on *Dandelion Wine*, *The Martian Chronicles* or *Fahrenheit 451*. Instead, it's a full house at the science fiction writer's March 11 speech in Chumash Auditorium.

"No one can advise you about anything you can do if you have a mad love," declared the white-haired author, looking like an energetic bespectacled gnome. Acting on "a lot of crazy loves"—like dinosaurs, Buck Rogers, future cities and Disney films—shaped his own life, Bradbury explained.

After "falling into" Buck Rogers at eight or nine, he gave up his favorite literature when others told him to. But when longing led him back to it, he realized he was right and the world was wrong, said the man who is considered the "B" in the ABC of science fiction.

The peer of Isaac Asimov and Arthur C. Clarke urged his listeners to be guided by their own dreams rather than what parents or teachers want them to do.

"I have my Troy in me, allow me to dig," Bradbury

Mustang Daily—Lori Ortiz

Pam Buergin and Cathee Barkley coordinated the Senior Home Share Program, which places housemates with senior citizens, or seniors with others with room, as their senior project.

Canal controversy will be addressed

California's much-discussed Peripheral Canal project will be the subject of an illustrated talk to be given during the

regular meeting of the Cal Poly student chapter of the American Society of Civil Engineers on Wednesday, April 7, at the university.

Matt Hilling, a civil engineer assigned to the State Department of Water Resources in Sacramento, will use a short motion picture on the ecology of the San Joaquin River Delta to illustrate his discussion of the Peripheral Canal proposal; the Central Valley Water Project; and Senate Bill 200, enabling legislation for the Peripheral Canal.

Bill Kivela, who is coordinating arrangements for the ASCE meeting, said all who are interested in California's water resource plans are invited to attend and take part in the question and answer period that will follow Hilling's presentation.

The meeting will begin at 7:30 p.m. in Staff Dining Room B in the University Dining Complex on South Perimeter Road, across from the university's Physical Education Building. Admission will be free.

Students' project helps sr. citizens to find home

By CINDY BLANKENBURG

Staff Writer

Two Cal Poly students not only fulfilled requirements for their senior project but also fulfilled a long time need for senior citizen housing in San Luis Obispo with their work in a senior placement service.

As part of their senior projects, child development major Pam Buergin and Cathee Barkley, a liberal studies major, undertook coordination of Senior Home Share Program, a division of the Retired Senior Volunteer Program.

The program's main goal is matching people who have a home to share with those who are seeking one, Barkley said. At least one home-sharer in each match is an older adult.

Some of the other goals, according to the two students, are to help people find a home or a housemate, reduce living cost, promote companionship with a compatible person, increase a sense of security, and decrease the number of senior citizens placed in institutions.

According to Mary Kunz, coordinator of Senior Home Share, each prospective home-sharer is interviewed in person. Client information is reviewed and suitable housemates are matched up.

The Senior Home Share staff will help the home-sharers form an agreement and will be available for counseling if necessary.

Buergin said some of the questions posed to the prospective home-sharers include the living location they want, type of housing, habits, characteristics, and whether they smoke or not. It is up to the participants to contact one another after they are matched up, Buergin said.

If the prospective housemates want to make an informal agreement, then they are helped by the Senior Home Share staff, Buergin and Barkley said. The agreement is similar to a housing contract.

The program was started for a number of reasons, the students said, but primarily because it meets the needs of the senior citizens. They are lonely,

afraid, and sometimes have no family or place to live because of a housing shortage, the two said.

"I encourage Cal Poly students to join the program," Barkley said. "It helps intergenerational contact, helps cut living costs and provides a quiet atmosphere for studying."

A lot of senior citizens are willing to share their home for little rent and some for none, Buergin and Barkley said. Some seniors will take services in exchange for rent. Others need the companionship so they won't even ask for rent.

"I think this is a really valuable program. I learned a lot," Barkley said.

To start the program, monthly meetings were held in cooperation with some of the local agencies, Barkley said. For instance, the students worked with the Human Relations Commission which gave \$1,500 to the program and the Area Agency on Aging, which contributed \$10,000.

Conducting the meetings was difficult, the two students said. They had to relate to professionals in a professional manner and they encountered a lot of red tape in dealing with the different agencies, they added.

"We became aware of the needs of the senior citizens through this program," Buergin said.

"Originally, I wanted to go into social work after graduation," said Barkley. "However, with the proposed budget cuts by Reagan, I don't think that I will be able to find a job in this profession."

"I am going to use the coordinating skills that I learned in my future career," Buergin said.

Bradbury explains love for books and dinosaurs

From page 5

said, after recounting the tale of Heinrich Schliemann's insistence on digging for the fabled city of Homer's tales. He said people might find Poughkeepsie rather than Troy, but they should still "dig for something, for God's sake. Because otherwise you're so damn boring you can't stand yourself."

The author said he frequently refers to other authors and artists in his stories, poems and plays. Among other anecdotes, he

quoted his poem about Sat-chmo Armstrong and told a story about Ernest Hemingway's parrot.

"I want you to run into the library and fall in love," said Bradbury, calling himself "a completely library-oriented person." People should "devour" books, with salad dressing if necessary, said the man who got a job after high school selling newspapers and "graduated from the library when I was 27."

Bradbury fell in love with dinosaurs when he

saw "The Lost World" at the age of five or six. Years later, the sight of the abandoned Venice pier standing like the bones of a beached dinosaur inspired him to write the 1954 short story "The Beast From 20,000 Fathoms."

Director John Huston saw the ghost of Melville in his story about the dinosaur that fell in love with a foghorn, Bradbury said. Huston hired him to write the screenplay for the 1956 film of *Moby Dick*.

"As a result of my

dinosaur love, I was working on *Moby Dick*", exulted the author, adding that Melville's great work was influenced by Shakespeare and the Bible.

Bradbury said it was as if Shakespeare had appeared before the later author and cried, "O, Herman Melville, truly come you forth, and come you forth as a white whale!" And Shakespeare pulled the whale—berthed it—from Melville's forehead, Bradbury declared with a dramatic

gesture.

Literature is only one of Bradbury's many loves. At 12 and 13, he dreamed of future cities and made sketches and blueprints. He was able to realize those dreams when the New York Pavilion was being built 15 years ago, and he was asked to design the top floor.

"Can you fill it with metaphors?" asked the people who had hired him on the basis of his work with Huston. So he fashioned an exhibit

around the theme of Americans as "the triple wilderness people."

Explorers took a short time to cross the sea to the new world, went "through the grass (of the prairies) for a little while and to the stars forever," Bradbury declared.

Three years ago, he was hired by Disneyland to design the Spaceship Earth display which will open Oct. 5. Bradbury recalled Walt Disney, whom he met 20 years ago, as "a passionate man who didn't look it."

"He was living the way I want you to live and I want you to try to live...He was the luckiest man I ever met—outside of myself," the writer said.

"We're all theater people," he added, calling architecture one type of theater, and writing another. Bradbury switched roles again to work with a company that is rebuilding downtown San Diego.

"Just imagine—things as they ought to be," is the motto of the group that plans "to do the whole thing over and get it right," declared the science fiction writer.

Bechtel hired to oversee Diablo

From page 1

Additional force

Sue Brown, representative for PG&E, said Bechtel was hired as an "additional force" to augment the PG&E staff already working on the Diablo Canyon project.

"There was too much for our staff to handle to carry on the normal work of PG&E plus the Diablo project," said Brown. "So we hired our next-door neighbors (Bechtel) up in San Francisco to help us out."

Brown said Bechtel will not be "taking over" the reigns of management as much as "expanding and directing" the existing staff.

Brown said Bechtel has considerable experience with nuclear power plants. They manage "somewhere near 76 plants" in the nation, she said.

Thomas said, Bechtel will be careful to "assess the concerns of PG&E, the NRC and the public" in the firm's effort to obtain a full-power license.

"Time is not our main concern," said Thomas. "Our main concern is to put together a competent team who will meet the needs and concerns of the NRC and satisfy people."

Bechtel will direct and manage the nuclear power plant completion project only until all the bugs are worked out and until a full-power license is granted for the entire plant, said Thomas.

"Bechtel was only hired on a temporary basis, until this project is completed," said Brown.

Steve Van Horn dies in fall

Steve Van Horn, a reserve forward on the Mustang basketball team during the 1981-82 season, fell 60 feet off a rocky cliff in Baja California during spring break and died shortly afterward. He was 21.

The accident, which happened on Friday, March 19, took place at Rosarita Beach in Mexico, 25 miles south of Tijuana. Van Horn, fellow basketball players Keith Wheeler and Clark Guest, and four girls had planned on camping there during vacation.

The group was setting up camp on a ridge with a slight downhill grade. According to Poly Athletic Director Dick Heaton, Van Horn stumbled at the base of the cliff and fell down the side of the cliff to the rocks below.

Van Horn was still breathing when Wheeler, Guest, and some other campers reached him. But Van Horn was pronounced dead on arrival at a nearby hospital an hour after his fall.

As custom in Mexico, the six students were jailed for 22 hours. They were released late Saturday night, and spent Sunday in San Diego. Wheeler, Guest, and the girls returned to Mexico for a coroner's inquest on Monday. The death was determined by authorities as an accident, and Van Horn's body was released to his parents.

Van Horn, an industrial technology major, was a two-time all-CIF player at Estancia High School, where he graduated in 1979. He played one season at Fullerton Junior College for his father, coach Ezra Van Horn. The elder Van Horn retired from coaching after the 1980 season, and Steve transferred to Poly. Van Horn and Guest were teammates at Fullerton before coming to San Luis Obispo.

Van Horn was the fifth-leading scorer on the Mustangs squad, averaging 5.4 points a game while seeing action in 27 of the team's 29 games. The 6-5 forward averaged 14 minutes and 2.6 rebounds

Mustang Daily—Vern Ahrendes

Mustang Steve Van Horn tries to get a shot off against Bakersfield.

per game, had 21 steals, and shot 55 percent from the field.

Mustang assistant coach Tony Oddo said that the church in Orange County where Van Horn's funeral was held was filled with friends and well-wishers.

"It's really amazing how many people Steve really touched," said Oddo. "He was just a super person. He was very

competitive on the court, and a gentleman and friend off court. He was very people-oriented. He was the kind of a guy that's hard to dislike."

Said Mustang head coach Ernie Wheeler, "It's just very, very sad. Steve had matured so much as a player and as a person this year. He had so many nice things going for him. It's just a shame."

Two matmen place at nationals; team is 24th

Louie Montano and Mike Barfuss earned All-America honors and helped the Mustang wrestling team to a 24th-place finish in the NCAA Division I National Championships in Ames, Iowa.

Montano, wrestling in the 158-pound division, went 3-3 in the nationals for eighth place. The junior from Calexico met two-time defending champion Ricky Stewart of Oklahoma State in one of the tournament's best bouts. Montano and Stewart were knotted at 2-2 after regulation time, and the Mustang found himself with a 3-1 lead and one minute remaining in the overtime period.

Montano was penalized a point for stalling, and then made a dash at Stewart because he thought the

score was tied. Stewart escaped the rush and took Montano down in the last 20 seconds for the 4-3 win.

Montano lost to Syracuse's Chris Catalfo in the championship quarterfinals and faced Arizona State's Jackson Kistler in the seventh-place bout. Kistler avenged an earlier loss to Montano during the season and won 3-1.

Montano opened the nationals with wins over Rick O'Shea of Oregon, 7-3, and Greg Smith of Wisconsin, 6-3. After the Stewart loss, Montano rebounded to stop Paul Morina of James Madison 8-4 before losing his last two bouts. He finished the season with a 27-5 record.

Barfuss, a senior 134-pounder, also went 3-3 to finish eighth in his weight category. He dropped an 8-

6 decision to Old Dominion's Buddy Lee in the seventh-place bout after losing 12-7 to LSU's Jim Edwards in the championship bracket.

Barfuss, who ended the season with a 26-12 record, opened the tournament with a 26-9 thrashing of Navy's Dave Halliday. He lost to All-America performer Jim Gibbons of Iowa 7-6 on a disputed call, and then posted strong wins over Boston's Mike Enzian (15-2) and Oklahoma State's Clar Anderson (13-4) before dropping his last two bouts.

Four other Mustangs made the trip to Ames. Joe Elinsky opened his 190-pound competition by dumping Dan Corbin of James Madison 11-6, but lost to seventh-seeded

Jerry Rodriguez of North Carolina State by pin at 2:39 of the bout. Elinsky was 27-8 on the season.

Pat O'Donnell also went 1-1 in the nationals, nipping Phil Mattera of

Hofstra 5-4 in the 150-pound opener but falling to Oklahoma State's Brad Swartz 4-3. O'Donnell finished with a 12-17 season mark. At 118 pounds, Mustang Al

Gutierrez lost to sixth-seeded Bob Monaghan of North Carolina 17-4, and ended the year with a 24-10 record.

Chris Cain competed at Please see page 11

CAREER OPPORTUNITIES BUSINESS MANAGEMENT TRAINING PROGRAM FOR GRADUATES IN ALL MAJORS

Do you like to achieve results by working through other people? Are you looking for a career where you can use your education and talent in a business environment?

Are you an organized, aggressive self-starter, able to work at a fast pace under pressure? If so, we would like to meet with you.

Any major could qualify you for management training positions in the following areas:

Finance Division; accounting, accounts payable, credit, data processing;

Operations Division; food service, expense analysis, distribution purchasing, security;

Personnel Division; personnel, training.

Register now for interviews at the Placement Center or send your resume to Executive Training Program/Business Management, Seventh and Hill Streets, Los Angeles, 90014

SENIORS:

Graduate into a Career

CURRENT, INC. (Looart Press), a direct mail marketing company located in Colorado Springs, is seeking candidates for its Rotational Training Program for recent college graduates.

CURRENT, INC. designs, manufactures and markets greeting cards, fine stationery and other gift items, shipping orders to over 7 million customers from coast to coast.

We are seeking candidates with degrees in Print Management. Representatives from Current will be visiting your campus Friday, April 16 to discuss with you opportunities at Current and see if you would be interested in joining the over 900 people who call Current, Inc. their home.

Take a look at OUR resume... if you have questions about our company, please consult literature on file in the placement office, or contact Sam Sargent, 3525 N. Stone, Colorado Springs, Colorado 80907. We will be looking forward to talking with you.

Men's and women's swim squads sixth at NCAAs

Brian Wilkerson and John Scott led Poly's men's swimming team to a sixth-place finish in the NCAA Division II National Championships at Clarion State University in Pennsylvania.

The women's team, paced by Nancy Stauffer, also came in sixth at its national meet at Northeast Missouri State University.

Wilkerson won the 100 backstroke in 52.98 and finished second in the 200 backstroke in 1:57.53, while Scott ended up second in both the 200 freestyle (1:42.50) and the 500 freestyle (4:36.54). Scott, a 1980 All-America competitor, also took seventh in the 1,650 freestyle with a 16:26.12 effort.

Other Mustang place

winner were Eric Peterson, 12th in the 500 freestyle (4:44.19) and sixth in the 1,650 freestyle (16:25.86); Greg Shields, who finished 12th in the 200 individual medley (2:00.54), sixth in the 100 backstroke (55.07) and ninth in the 200 backstroke (2:01.39); and Dave Borah, seventh in the 100 breaststroke (59.29) and eighth in the 200 breaststroke (2:09.68). Borah and Shields are also returning All-Americans.

Two relay teams also scored as the 400 freestyle squad finished eighth in 3:11.54, and the 800 freestyle relay placed sixth with a time of 7:01.59. Mike Rinehart and Loren Gearhardt each teamed on both of the relays, with Kirk Simon swimming in

400 event and Mike Peterseim competing on the 800 team. The Mustangs had 10 swimmers receive All-American honors.

Cal State Northridge breezed to the team title with 444 points, with Puge Sound finishing a distant second. The Mustangs scored 121 points.

Stauffer placed in five races, including a win the 400 individual medley with a time of 4:35.05. She finished third in the 500 freestyle and the 200 medley, took fourth in the 1,650 freestyle, and came in fifth in the 200 freestyle. Stauffer also placed on the 400 and 200 freestyle teams.

Sue Stahl recorded fifth-place finishes in the 50 and

100 freestyle races, and competed on four relay teams, the 200 and 400 freestyle and medley relay squads. Lori Bottom came in 10th in the 100 butterfly (1:01.20) and second in the

50 fly (26.92), and swam on the medley relay teams.

Sandy Faron had ninth in the 50 backstroke and a 10th in the 100 backstroke, and Jody Jennison finished fourth in the 200

breaststroke and seventh in the 100 breaststroke. Tori Scallon swam on three relay legs, and Susan Watt competed in freestyle relay events, which both placed in the top five.

Lucas aids West all-star team to win

Poly power forward Kevin Lucas scored 10 points to help the West squad thrash the East team, 102-68 in the Coaches All-Star game Sunday at Tulane University in New Orleans.

Lucas, the California Collegiate Athletic Associa-

tion co-player of the year, also had four rebounds, five assists, and two blocked shots before fouling out. He played 21 minutes of the game.

A 6-4 senior, Lucas was selected by the NCAA coaches to participate in the game. John Ebeling of

Florida Southern was the only other Division II player in the game. Lucas' teammates included Oregon State's Lester Connors, Arkansas's Scott Hastings, Missouri's Ricky Frazier, and Fresno State's Rod Higgins, the leading scorer with 16 points.

Dickie places with all-around good job

Mustang gymnast Pam Dickie became the first Poly woman to place in the NCAA Division II finals as she finished 19th in the all-around competition at the nationals at Springfield College in Springfield, Mass.

In addition, the Mustang sophomore took eighth place in the uneven bars finals Saturday after quali-

fying in Friday's all-around division. Dickie amassed 32.1 points in the four events for her 19th-place finish, including an 8.45 in the uneven bars which advanced her to the finals.

Dickie qualified for the nationals as an at-large performer. The NCAA took the top eight teams in the nation, and eight additional at-large competitors.

Dickie was the seventh all-around athlete elected, and went to Springfield as the 29th seed of 32 entrants.

"It was a very good meet for her," said Mustang coach Andy Proctor. "She completed close to her maximum potential in everything. She felt very good about the performance. It was a good end to the whole season."

Poly wrestlers place 24th

From page 10

142 pounds, losing his bouts to third-ranked Johnnie Selmon of Nebraska 18-5 and to Bell Swezey of William & Mary 4-3. Cain, the two-time Western Regional champion, had a 22-6-1 mark in his senior year.

Iowa won its fifth consecutive team crown with 131 3/4 points, easily outdistancing Iowa State, the runner-up with 11 points.

REGULATORY ANALYST \$1327-2073/MO

The State Personnel Board is currently testing for PUBLIC UTILITIES REGULATORY ANALYST positions. Incumbents, under supervision, analyze, evaluate and develop alternatives and make recommendations on a wide variety of issues surrounding public utilities regulation in the economics, finance and policy. All positions are located in San Francisco.

REQUIREMENTS: Equivalent to graduation from college with any major, but with at least 24 semester units of upper division course-work in economics, finance, public policy, energy policy or closely related fields. (Seniors in a recognized institution will be admitted to take the examination, but must produce evidence of graduation or its equivalent before appointment.) (Work experience performing technical economic, financial or policy research related to public utilities regulation may be substituted for education on a year-for-year basis.)

HOW TO APPLY: Application form 100-678 is available at any Employment Development Office or State Personnel Board Office. Mail completed application to State Personnel Board, 801 Capitol Mall, Sacramento, CA 95814. Applicants should list specific upper division course titles, dates completed and number of units (either semester or quarter) earned for each course on the application form.

FINAL FILING DATE: APRIL 8, 1982

Two matmen place at nationals; team is 24th

Louie Montano and Mike Barfuss earned All-America honors and helped the Mustang wrestling team to a 24th-place finish in the NCAA Division I National Championships in Ames, Iowa.

Montano, wrestling in the 158-pound division, went 3-3 in the nationals for eighth place. The junior from Calexico met two-time defending champion Ricky Stewart of Oklahoma State in one of the tournament's best bouts. Montano and Stewart were knotted at 2-2 after regulation time, and the Mustang found himself with a 3-1 lead and one minute remaining in the overtime period.

Montano was penalized a point for stalling, and then made a dash at Stewart because he thought the

score was tied. Stewart escaped the rush and took Montano down in the last 20 seconds for the 4-3 win.

Montano lost to Syracuse's Chris Catalfo in the championship quarterfinals and faced Arizona State's Jackson Kistler in the seventh-place bout. Kistler avenged an earlier loss to Montano during the season and won 3-1.

Montano opened the nationals with wins over Rick O'Shea of Oregon, 7-3, and Greg Smith of Wisconsin, 6-3. After the Stewart loss, Montano rebounded to stop Paul Morina of James Madison 8-4 before losing his last two bouts. He finished the season with a 27-5 record.

Barfuss, a senior 134-pounder, also went 3-3 to finish eighth in his weight category. He dropped an 8-

6 decision to Old Dominion's Buddy Lee in the seventh-place bout after losing 12-7 to LSU's Jim Edwards in the championship bracket.

Barfuss, who ended the season with a 26-12 record, opened the tournament with a 26-9 thrashing of Navy's Dave Halliday. He lost to All-America performer Jim Gibbons of Iowa 7-6 on a disputed call, and then posted strong wins over Boston's Mike Enzian (15-2) and Oklahoma State's Clar Anderson (13-4) before dropping his last two bouts.

Four other Mustangs made the trip to Ames. Joe Elinsky opened his 190-pound competition by dumping Dan Corbin of James Madison 11-6, but lost to seventh-seeded

Jerry Rodriguez of North Carolina State by pin at 2:39 of the bout. Elinsky was 27-8 on the season.

Pat O'Donnell also went 1-1 in the nationals, nipping Phil Mattera of

Hofstra 5-4 in the 150-pound opener but falling to Oklahoma State's Brad Swartz 4-3. O'Donnell finished with a 12-17 season mark. At 118 pounds, Mustang Al

Gutierrez lost to sixth-seeded Bob Monaghan of North Carolina 17-4, and ended the year with a 24-10 record.

Men's and women's swim squads sixth at NCAs

Brian Wilkerson and John Scott led Poly's men's swimming team to a sixth-place finish in the NCAA Division II National Championships at Clarion State University in Pennsylvania.

The women's team, paced by Nancy Stauffer, also came in sixth at its national meet at Northeast Missouri State University.

Wilkerson won the 100 backstroke in 52.98 and finished second in the 200 backstroke in 1:57.53, while Scott ended up second in both the 200 freestyle (1:42.50) and the 500 freestyle (4:36.54). Scott, a 1980 All-America competitor, also took seventh in the 1,650 freestyle with a 16:26.12 effort.

Other Mustang place

winners were Eric Peterson, 12th in the 500 freestyle (4:44.19) and sixth in the 1,650 freestyle (16:25.86); Greg Shields, who finished 12th in the 200 individual medley (2:00.54), sixth in the 100 backstroke (55.07) and ninth in the 200 backstroke (2:01.39); and Dave Borah, seventh in the 100 breaststroke (59.29) and eighth in the 200 breaststroke (2:09.68). Borah and Shields are also returning All-Americans.

Two relay teams also scored as the 400 freestyle squad finished eighth in 3:11.54, and the 800 freestyle relay placed sixth with a time of 7:01.59. Mike Rinehart and Loren Gearhardt each teamed on both of the relays, with Kirk Simon swimming in

400 event and Mike Peterseim competing on the 800 team. The Mustangs had 10 swimmers receive All-American honors.

Cal State Northridge breezed to the team title with 444 points, with Puge Sound finishing a distant second. The Mustangs scored 121 points.

Stauffer placed in five races, including a win the 400 individual medley with a time of 4:35.05. She finished third in the 500 freestyle and the 200 medley, took fourth in the 1,650 freestyle, and came in fifth in the 200 freestyle. Stauffer also placed on the 400 and 200 freestyle teams.

Sue Stahl recorded fifth-place finishes in the 50 and

100 freestyle races, and competed on four relay teams, the 200 and 400 freestyle and medley relay squads. Lori Bottom came in 10th in the 100 butterfly (1:01.20) and second in the

50 fly (26.92), and swam on the medley relay teams.

Sandy Faron had ninth in the 50 backstroke and a 10th in the 100 backstroke, and Jody Jennison finished fourth in the 200

breaststroke and seventh in the 100 breaststroke.

Tori Scallon swam on three relay legs, and Susan Watt competed in freestyle relay events, which both placed in the top five.

Lucas aids West all-star team to win

Poly power forward Kevin Lucas scored 10 points to help the West squad thrash the East team, 102-68 in the Coaches All-Star game Sunday at Tulane University in New Orleans.

Lucas, the California Collegiate Athletic Association

co-player of the year, also had four rebounds, five assists, and two blocked shots before fouling out. He played 21 minutes of the game.

A 6-4 senior, Lucas was selected by the NCAA coaches to participate in the game. John Ebeling of

Florida Southern was the only other Division II player in the game. Lucas' teammates included Oregon State's Lester Connors, Arkansas's Scott Hastings, Missouri's Ricky Frazier, and Fresno State's Rod Higgins, the leading scorer with 16 points.

Dickie places with all-around good job

Mustang gymnast Pam Dickie became the first Poly woman to place in the NCAA Division II finals as she finished 19th in the all-around competition at the nationals at Springfield College in Springfield, Mass.

In addition, the Mustang sophomore took eighth place in the uneven bars finals Saturday after quali-

fying in Friday's all-around division. Dickie amassed 32.1 points in the four events for her 19th-place finish, including an 8.45 in the uneven bars which advanced her to the finals.

Dickie qualified for the nationals as an at-large performer. The NCAA took the top eight teams in the nation, and eight additional at-large competitors.

Dickie was the seventh all-around athlete elected, and went to Springfield as the 29th seed of 32 entrants.

"It was a very good meet for her," said Mustang coach Andy Proctor. "She completed close to her maximum potential in everything. She felt very good about the performance. It was a good end to the whole season."

Poly wrestlers place 24th

From page 10

142 pounds, losing his bouts to third-ranked Johnnie Selmon of Nebraska 18-5 and to Bell Swezey of William & Mary 4-3. Cain, the two-time Western Regional champion, had a 22-6-1 mark in his senior year.

Iowa won its fifth consecutive team crown with 131 3/4 points, easily outdistancing Iowa State, the runner-up with 11 points.

Terminal patient

The prognosis is grave. The patient on the operating table has sunk into a coma and hovers near death. The doctors' attempts to resuscitate the patient have apparently failed.

With death imminent, most doctors would probably call in a priest to perform last rites. But not Pacific Gas and Electric Co. PG&E simply calls in another surgeon.

PG&E announced earlier this month that it had hired the famous engineering doctor the Bechtel Power Corp. to perform surgery on the ailing Diablo Canyon Nuclear Power Plant which has been suffering from a terminal case of design erroritis and poor management. Bechtel will act as project manager for Diablo Canyon, attempting to resolve the plant's insurmountable seismic design problems and to over see the full-power licensing and projected start-up process.

With its announcement, PG&E has admitted something its opponents have known for years: the utility itself doesn't have the ability to design a safe nuclear power plant. Even William Seavy, PG&E community relations director, conceded Diablo has "grown to the point where it goes beyond our capabilities."

Hopefully Bechtel will be more cautious than PG&E which, according to a report released March 15 by R.F. Reedy Inc., failed to use procedures established to catch design flaws at Diablo.

However, the *Mustang Daily* Editorial Board believes that the decision to hire Bechtel was motivated not so much to improve the safety of the nuclear power plants as it was to try to restore PG&E's credibility with the public and the Nuclear Regulatory Commission. With the discovery of over 100 design errors at Diablo Canyon, the Reedy report, and NRC claims that PG&E has been arrogant and considers safety reviews a nuisance, God knows that PG&E's credibility could use a facelift.

Although the *Mustang Daily* Editorial Board was delighted to hear PG&E confess that building a safe nuclear power plant was beyond its capabilities, the utility should not have called in another surgeon. Rather it should have allowed the patient to enjoy an easy and painless death.

Though Bechtel may indeed improve PG&E's image, the hiring of that San Francisco-based corporation does not change the fact the plant is still riddled with fundamental design errors—serious enough to rate a seismic review by Engineering Services, a subsidiary of Teledine, Inc. With over 100 errors discovered so far, it appears that Humpty Dumpty had a better chance of put back together than does Diablo Canyon.

Letters

Self-styled evangelist

Editor:

I am writing you concerning the harassment and verbal abuse some of you have received at the hands of some so-called Christians. I'm referring to those individuals who have been seen and heard ranting and raving, preaching hate, and casting unfair judgements in the name of Christ. I personally find this sort of behavior deplorable and totally incompatible with the principles of true Christianity.

These self-styled evangelists (I use the term loosely) may believe in Christ but are at best, unlearned in matters concerning the teachings of Jesus. Anyone who claims to be a Christian and preaches hate or is a name caller should go back to the Bible and seriously study Christ's teachings on love, forgiveness, and judgement of others. A humble seeking of forgiveness for themselves and proper enlightenment would be in order also.

The only proper and acceptable motive for preaching the message of God is love, on an unconditional basis. If Christians can't reach out in love,

they shouldn't reach out at all.

I encourage all of you to seek out the wisdom and message of the Bible for yourselves so you might know the difference between sheep and wolves. I encourage the campus Christians to take a lesson from these self-styled evangelists of ignorance and "be-ye not like unto them."

Please accept my apology on behalf of these people who have abused you. Please forgive them. "They know not what they do."

Jeffrey Malmen
