Fraternity paints the town red

By MARGARET BARRETT
Staff Writer

Sigma Alpha Epsilon fraternity held its fourth annual Red Party Friday night at the Veterans Memorial Building. Over a thousand people attended.

"It's the social event of the weekend," said Karen Wolfe, a junior industrial engineering major at the party.

The party included music by three bands and a raffle. Sigma Alpha Epsilon volunteered to pay the first prize winner's student fees for one quarter or \$225 in cash. Various other prizes included free dinners at San Luis Obispo restaurants, hats and T-shirts.

Stan Lowe, the president of Sigma Alpha Epsilon, said that the party was originally held at the former fraternity house until last year when the members decided to have it at the Veteran's hall, enabling more people to attend. Because of zoning laws, the men had to sell their house at 679 Monterey Street. The money made from the party will go towards buying a new house.

Students catch G-string suspect

By REBECCA PROUGH
Managing Editor

A man who has been confronting women on campus wearing only a G-string or other minimal clothing was caught by Cal Poly police on Saturday.

Several people in Sierra Madre dorms recognized the suspect from the composite photograph the *Mustang Daily* ran on March 1, Investigator Ray Berrett said, and called the police. The man was seen around 11 a.m. wearing blue tights.

Berrett said two Cal Poly students chased the suspect when they saw him prowling around, and then held him until Cal Poly Police Officer Robert Schumacher arrived to take him into custody. He was not arrested and was released that afternoon.

rested and was released that afternoon.

The suspect is a 24-year-old San Luis Obispo resident, and he is not a Cal Poly student. The scantily-clad man had allegedly confronted women in the dorms and asked them for directions to the nearest swimming pool. His name has not been released.

Berrett said there have been reports of these kinds of confrontations coming in from all over town. He added that the suspect did say if someone had come up to him during one of his escapades and told him to get out or go away, he would have.

The Cal Poly Police Department is filing a complaint against the suspect this week with the District Attorney's office, Berrett said.

California farm debt: Poly prof's specialty

By TED LEWIS
Staff Writer

American foreign policy, the strength of the dollar overseas and the inflation/recession periods experienced in the past are the main causes for the current farm debt crisis, said a member of the California Agricultural Leader Program.

Timothy La Salle, a professor of Dairy Science at Cal Poly and member of the C.A.L.P., explained the reasons for the farm debt crisis in a meeting at Cal Poly on Saturday, March 2.

"Historically the State Department has had an effect on food prices," said La Salle. "Foreign policy stated we were going to use food as a weapon, such as the Russian Embargo. The Russians laughed at us

because they knew they could get the grain from some other country."

Implementing the the embargo against the Soviet Union and Japan helped destroy the United States' credibility as a supplier, we could no longer be trusted.

The strength of the dollar makes it undesirable for foreign countries to buy from the United States. The dollar is worth more than foreign currency, so the foreign countries would rather buy from countries where their money will buy more.

Internationally the current dollar value hurts the farmer. In the United States, a farmer can produce a crate of cucumbers for \$6. The same crate of cucumbers can be grown for 25¢ in Mexico.

Post made permanent

Associate dean for Engineering

By MARC MEREDYTH
Staff Writer

The temporary position of associate dean of engineering has been made a permanent position and the acting associate dean named to the post.

Gustav N. Wassel, who has been acting associate dean since 1983 when Dean of Engineering Robert Valpey resigned, was appointed by Cal Poly President Warren J. Baker on the recommendation of Provost Tomlinson Fort Jr. and Dean of Engineering Duane Bruley.

Wassel, a specialist in artificial intelligence and noise analysis of electronic circuits, has 24 years experience in the engineering profession. Prior to joining the Cal Poly faculty in 1980, he was a professor of electrical and computer engineering at Cal Poly Pomona for 18 years.

With a doctorate in engineering from the University of California, Irvine and his bachelor's and master's in electrical engineering from Caltech, Wassel has served as a consultant for the Santa Barbara Research Center in Goleta, been a visiting professor and senior research engineer at UC Irvine, worked as a senior engineer with Burroughs Corp. in Pasadena, been a space science and digital systems engineer for Consolidated System Corp. in Pomona, and worked as a systems development engineer with Aerojet General Corp. in Azusa.

From 1966 to 1968 Wassel headed a combined Cal Poly (San Luis Obispo and Pomona)

engineering faculty team at Dar es Salaam Technical College in Tanzania.

Wassel said his position at Poly has the traditional duties of an associate dean and also some additional duties that are important.

The traditional role involves coordinating engineering students on academic probation, assisting in making contact with private industry for support of Cal Poly, counseling prospective engineering students and their parents and working with the community colleges regarding transfer students.

Wassel said he advises the student Engineering Council and is involved with special projects like university catalog updates and preparations for accreditation. The associate dean also acts for the dean in his absence.

In addition to his regular duties though, Wassel coordinates the engineering graduate programs. He said he's presently working on the new graduate intern program and has at least 12 companies that are seriously interested and should have positions for students by Fall Quarter.

Wassel said he's "like a department head without a department," in reference to the job he has in coordinating the engineering science degree program which now has about 35 students. Engineering science has a larger theory component, as opposed to engineering design, or the hands-on approach, that Poly is known for.

Wassel is a member of Tau

Beta Pi, the national engineering honor society, Eta Kappa Nu, the national electrical engineering honor society, and the Institute of Electrical and Electronic Engineers. The Cal Poly student chapter of IEEE voted him Most Inspirational Instructor in 1982.

Imagination and the origin of religion

By KRISTIN RONCARATI
Staff Writer

The imagination plays a crucial role in religion and its origin, said a Cal Poly philosophy professor last Thursday.

Dr. Judy Saltzman spoke to a full crowd in the University Union on the topic of imagination and how it relates to religion. Her talk, sponsored by the School of Communicative Arts and Humanities, was titled, "Divine Creation, Divine Imagination: Some Ideas on the Origin of Religion."

"I come to you to talk to you about the religious imagination...the role the imagination plays in religion," Dr. Saltzman said. "The imagination plays a crucial role in the origin of religion...and religion in turn plays a role in the development of the imagination."

In her talk, Dr. Saltzman attempted to answer questions such as, "What is the imagination?" "What is religion, and how did it originate?" and "do our psychological and social needs create religions?"

The first question Dr. Saltzman addressed was to define the concept of the imagination. In her definition she used the ideas of Frederic Von Schell-

ing, a 19th century German philosopher, and William Wordsworth and William Blake, two English poets. She explained

Please see Imagination, page 4

TERESA NG/Mustang Daily

Dr. Judy Saltzman examines the role of imagination in the creation of religion.

Your voice counts, let it be heard

Students who are always complaining about the ineffectiveness of the ASI now have a chance to do something about it.

Applications are being accepted for next year's ASI officers, and *The Mustang Daily* encourages students who want to make a difference at this university to take the initiative.

People who think there isn't anything they can do to change things are wrong. The positions of president, vice president and student senators are open to students in all majors — there is no excuse for an apathetic attitude.

Though the ASI is often criticized for its actions, it does represent the students. People have no room to complain about ASI decisions on the add/drop policy, relations with the Foundation or how it handles its million dollar budget if they are not willing to exert some effort to change things.

President Baker said in a *Mustang Daily* interview that he wants good relations with the student body, and working with the ASI is one of the best ways to achieve this goal. Baker is more apt to listen to a representative student group, than to 16,000 individual students.

It seems the same types of students are always involved in student government. They all want to do great things for the university, but in actuality they achieve such "lofty" goals as a new audio visual system. An audio visual system is nice, but there are certainly more critical issues the ASI could be dealing with.

It's time for there to be a better representation of the students' concerns.

Are you satisfied with current campus policies? Apathy only leads to stagnation.

There are some students who have great ideas that they would

like to see implemented at Cal Poly. But, they feel what they think is inconsequential because no one really listens.

The ASI is a way for those ideas to come to life. Students can make a difference by becoming involved — it sounds trite, but it's true.

Letters

University Union bowling alley decision criticized

Editor:

Rumor has it that University Union administrators are considering tearing out the bowling facilities and constructing new offices in its place! I feel that this is a poor decision.

I use the word "decision" because, as a games area employee, I have witnessed several discussions pertaining to construction plans, and as far as I am concerned, the administrators have already decided to go ahead with those plans. What bothers me the most, however, is the fact that up until then I never knew of any plans to dismantle the bowling facilities!

Therefore, I would like to address the administrators with these questions: When did you plan to let us students in on this? Before or after construction began? Evidently it appears that you were planning to inform us after construction began since you appear to be finalizing con-

struction plans. And finally I ask this: Will the students of Cal Poly be given a chance to decide whether or not they wish the bowling facilities removed?

I encourage everyone who frequents the bowling facilities to make themselves heard, or else our facilities will surely be dismantled.

Before concluding I would like to state that bowling is a sport that is shared by the young, the old and the disabled, whether they be faculty, staff, students or guests of this University. There are currently four student bowling leagues, two faculty/staff leagues, five sections of bowling classes through the P.E. Department and a variety of recreational bowlers who frequent the facilities. Why the popularity? Because bowling is the number one participatory, indoor sport in America. It is even being considered as a possible sport to be added to the Olympics!

Jeff Kozlowski

No parking; baseball field should stay

Editor:

Having already flushed the water polo and men's volleyball teams down the toilet and tried unsuccessfully to drown the swim team, are we going to put the baseball team out to pasture?

A resolution to convert the baseball practice field into a parking lot will be voted on by the Student Senate Wednesday night. If passed, and then approved by President Baker, the resolution will force the baseball team to move its practice facilities to the outer reaches of campus.

Dormitory food criticized

Editor:

There has been a lot of talk recently about what the Foundation is doing with their money. I would like to know what they are doing with their food. I, like all dorm residents have to eat it, and recently several of their meals have been downright disgusting.

Two of these were last week. On Tuesday the 26, they served chicken and pizza. The prongs of my fork would not penetrate the crust of the pizza, and it bent my

friend's fork! I don't think the chicken was much better, seeing how much my roommate had.

The Icelandic Cod on Thursday the 28 reached new levels of badness. After one bite, I could not force any more into my mouth. I do not trust the green things in the mashed potatoes either.

I would like to see the food improve. What really scares me is that I have heard that it gets worse next quarter.

Edward A. Bielfelt

removed from the campus core is disheartening, just ask a member of the swim team how it felt to drive out to Sinsheimer Park at 5:30 a.m. for morning workouts two years ago. It's difficult to have pride in wearing a Cal Poly uniform knowing that Cal Poly doesn't give a damn about you.

The *Mustang Daily's* March 1 editorial asks, "Which is more important, 700 students getting to class on time or 25 students practicing baseball?" Sure, I believe in majority rule. But I also believe that we must protect the rights of the minority as well.

Our student fees help support campus clubs, many of which are not much bigger than the baseball team. Can't we support our baseball team by leaving for class a little earlier?

President Baker and the Athletic Department, by saving a scholarship program threatened by cuts, have demonstrated a desire to keep Mustang athletics going strong. Now it's time for the student body to show a little support as well. Let's leave the baseball field intact and build our parking lot somewhere else.

DEBT

From page 1

Japan will not let much produce enter into their market because they want to protect their farmers. Saudi Arabia also subsidizes their farmers to protect them from foreign produce.

The U.S. has always been used to an abundance of food and having to export some of it, said La Salle. Basically this leaves the U.S. with a surplus of crops with no market to sell them in, explained La Salle.

Farmers expanded during the inflationary times because inflation rates were outpacing interest rates. Banks were giving the farmers loans because the banks would lose money if they kept the money themselves, said La Salle. So basically the banks were paying the farmers to take the loans.

The cost of money is high because of high interest rates. This causes the input costs of producing a crop to increase, La Salle explained. The amount of money coming in from foreign countries has decreased since the embargo and strength of the dollar.

As a result, La Salle said, farmers aren't getting as much money for their crops as they used to. This puts a farmer in debt by having high loan payments but receiving less money for their crops.

La Salle said the federal government believes in a free enterprise system with no subsidies.

He explained that the Carter Administration farm policy was to keep the support levels at the price level the government felt farmers would get for their crops. If farmers didn't receive the market price, then the government would make up the difference.

The dairy industry is the only one with a guaranteed price on its production. If the dairy farmers don't get their price then the government buys the milk. The government will make cheese, butter or powdered milk.

La Salle said the Reagan Administration would like to phase-out government subsidies for the dairy industry. In the proposed 1985 Farm Bill, the phase-out period would take three years.

If the bill passes as is, explained La Salle, California would lose a number of dairy farmers but not as many as the mid-west. California has the chance of moving from the number two milk producer in the nation to number one if the bill passes, La Salle said.

"There are too many cows producing too much milk. What should be done is to move the cows to market for slaughter, this would reduce the amount of milk that is currently being produced," explained La Salle. "The amount of milk being supplied is so far out of line with the amount being bought, that if the administration did pull out the government subsidy program

then it would destroy the dairyman."

He added, "It is the social responsibility of the government to help the farmer get out the trouble that the government helped get the farmer into. Then let free enterprise take over. It's a trap the farmer is in right now and the government should be socially responsible and help the farmer."

In the future, La Salle explained, it may be that only agriculture conglomerates would be able to afford to grow crops. It would be tough to think of not having a family operated farming operation, he added.

It would be a hard social decision, one that will be decided upon by efficiency of producing the crops, he said. Efficiency is going to be the only hope for survival for the farmer. The smaller family farmer may be a casualty if subsidy programs are stopped before the other problems are solved.

The 1985 Farm Bill is basically a mid-west grain oriented bill and would help farmers receive production loans. La Salle explained that it isn't oriented to California agriculture because California has such diversity in its crop production that no federal legislation that could regulate it.

La Salle graduated from Cal Poly in 1970. He will be travelling for three weeks as part of the California Agricultural Leader Program and will visit India, Sri Lanka, Singapore, and Thailand, speaking to their ministers of agriculture.

Upcoming elections for next year's ASI positions

The filing period for declaration of candidacy for ASI president, vice president and senators began Monday, March 4, and will remain open until 5 p.m., March 15. Interested students may sign up in the Activities Planning Center of the University Union. The following positions are available for the 1985-1986 academic year:

General Election
• ASI President
• ASI Vice President
Individual School Senate Elections

School	No. of Senators
• Agriculture	5
• Architecture	2
• Business	2
• Communicative Arts	2
• Engineering	5
• Professional Studies	4
• Science/Math	2

Elections will be held April 17 and 18. Active campaigning begins April 8. For more information, contact the Activities Planning Center.

PARTY

From page 1

"They are making a lot of money, but it's still a good time," said one of the guests at the party, Julie Florini a sophomore Cal Poly student.

Like any party at which alcohol is sold, representatives from Sigma Alpha Epsilon had to apply to buy a liquor license. However, the person from Sigma Alpha Epsilon responsible for obtaining the license, Sepp Maier, said the process was more difficult because he was a member of a fraternity. Maier told the steps he went through to obtain the license.

The first step is deciding on a location at which alcohol can be served. After the location has

been approved by the General Services Accountant, a police permit must be filled out. The Alcohol Beverage Control board will not grant a license unless the applicant has police approval.

"And that's a headache like you wouldn't believe," said Maier.

Maier said that it is virtually impossible for undergraduates in fraternities or sororities to obtain liquor licenses. The sponsor of the Red Party on Friday night was Sigma Alpha Epsilon's Alumni Association. The undergraduates were workers at the party and were not the official sponsors.

Once the police were satisfied that alumni would be present at

all times, Maier was required to list at least five names, approval was granted. The next step was to buy the \$30 license from the ABC.

Maier had one more place to visit, The State Board of Equalization. He had to estimate how much alcohol would be sold, for tax purposes. Sales tax is charged on a per drink basis.

There might have been a lot of work involved, but at least one member of Sigma Alpha Epsilon thought all the trouble was worth it. "It's an event. Nothing like this has ever been attempted in San Luis Obispo before," said Jeff Dewey, an electrical engineering major.

Students wait to get into the Red Party.

MARGARET BARRETT/Mustang Daily

IMAGINATION

that there are two levels of one's imagination, a higher level, or "real" imagination, and a lower level.

"The imagination in the higher sense, is what leads us to the philosophical thinking that is creative, which leads to grave religious moral ideas," said Saltzman. She added, "The higher imagination is that which leads us to abstract ideas and into higher and higher realms of creativity."

She disagrees with the beliefs of some philosophers, such as Plato, who feel that "the imagination is the lowest level of thinking at all." She feels that the imagination is misunderstood by Plato and other writers.

Saltzman also disagrees with the views of the "reductionists", who define religion as something that can be reduced to some psychological or social need. She explained, "Religion is in the heart of the human race...and because of this, undefineable."

"Religion will survive," Saltzman said. "It will die when man gives up his love of the beauty of nature, or when he gives up a need for life."

She said she feels, "Religion has much more going for it than the reductionists claim."

In her attempt to answer the question of how religion originated, Saltzman told the audience two stories which had to do with a disciple asking his master to give him an answer as to how the universe originated. The point of the two stories was "We are not in a position to answer the question (how the universe originated) until we lead a religious life," and "we don't know the answers, because we fail to see the manifestation of God in everyday life."

Saltzman ended her talk by saying, "We are the most imaginative people in the world."

Saltzman, a member of the Cal Poly philosophy staff since 1975, is a graduate of San Jose State University, where she earned

her bachelor's degree in philosophy and humanities. She received her master's degree in philosophy from the University of California, Berkeley. She has studied at the Goethe Institute, as well as the Freie Universitat in Berlin.

Upon her return from Germany, she earned a M.A. and a Ph.D. in religious studies from UC Santa Barbara. She worked last year as a visiting professor in religious studies at Stanford University.

Dr. Saltzman also coordinated Cal Poly's Humanities Program from 1980 to 1983, and in 1979 directed the Arts and Humanities series, "Work, Play and Worship."

She is a member of the Society for Women in Philosophy, Institute of World Culture, Society for Values in Higher Education, Society for the Scientific Study of Religion and the American Academy of Religion, for which she is on the Executive Council in the Western Region.

Cal Poly Rodeo queen contest today

By SUSAN EDMONDSON
Staff Writer

The Cal Poly Rodeo Queen Contest begins today at noon with a horsemanship competition at the Collett Arena on the Cal Poly campus.

The horsemanship competition is the first event in the two-day contest. Four women will compete in categories such as personality and appearance, modeling, horsemanship, public speaking and rodeo knowledge.

The winner of the contest will become Rodeo Queen and represent Cal Poly at the National Intercollegiate Rodeo Association finals in Bozeman, Montana in June. She will also make several appearances with the Poly Royal Queen and her court.

"I think it's going to be a real-

ly good contest this year," said Maureen Smith, an agricultural management sophomore and 1984 Rodeo Queen. "This year, it's going to be a pretty big deal."

To prepare for the event, the four contestants have undergone a month of practises and workshops with a professional model and a color analyst.

On Wednesday, March 6 at the Madonna Inn Garden Room, the women will model fashions from Bridle and Saddle, Rusty Spur and Farm Supply. The contestants will also give a two-minute speech introducing another contestant and they will answer impromptu questions about rodeo rules. The contest begins at 7:30 p.m. and the new queen will be announced after intermission.

The contest is open to the public and no admission fee will be charged.

The 1985 Rodeo Queen will receive a silver Poly Royal buckle, a \$100 gift certificate and many other gifts. Prizes for the first runner-up and the winners of public speaking and Miss Congeniality will also be awarded.

The queen will be asked to make public appearances throughout the year promoting the Rodeo Club and its activities.

The four contestants are Kristi Short, agricultural science major, Shelly Stae, agricultural education major, Carolyn Strehlow, agricultural management major, and Chrissy Sparling, speech communication major.

Engineer exchange program proposed

By MARC MEREDYTH
Staff Writer

The School of Engineering is studying a proposal for an engineering exchange program with the University of Stuttgart in Germany.

Associate Dean of Engineering Gustav N. Wassel said the program is still in the discussion stages, but that President Baker and the Provost's office have indicated their support for the proposal.

Wassel said the concept was formulated by Max Riedlsperger, a Poly history professor who served as a resident director for two German exchange programs last year.

The program would initially involve three to five students in their junior year who would spend an academic year in Germany, or possibly England, studying the language and their engineering discipline.

Riedlsperger said the idea came from exchange students he advised in Germany who were engineering majors.

"There's no opportunity for engineering students internationally," he said. "The Germans are great engineers so I figured they must have good education programs that could be opened up to us."

While in Germany, Riedlsperger discussed the exchange idea with people at the University of Stuttgart and said they were genuinely interested. He then wrote to President Baker, who encouraged him to pursue the idea. Discussion then began with the engineering dean.

Right now, Riedlsperger said, the university is looking at a state-wide system with International Programs in which Poly would participate. The possibili-

ty of students going alone is also being considered, he said.

The exchange program, as Riedlsperger envisions it, would consist of comprehensive language and cultural courses at the Language Institute of Tuebingen through the Learn German in Germany program. At the completion of these courses the students would transfer to the University of Stuttgart to take courses in engineering.

The opportunity exists for students to earn 12 to 15 units in engineering, as well as about 39 units in German which is almost enough for a minor at Cal Poly.

An additional possibility is co-op positions in German industry. Riedlsperger said preliminary negotiations are underway with a technical institute in Germany that would like to work with technical and business students from the United States to get them jobs upon completion of their studies.

Associate Dean Wassel said there are several advantages to having an engineering exchange program with Germany. There is the obvious cultural exchange on both ends, he said, but also the benefit of giving a greater perspective on engineering education to each university.

Wassel said he feels the German engineering programs may be more in tune with those of Cal Poly than many American schools. "Our practical approach relates well to the needs of other cultures," he said. The program would give Cal Poly international visibility as well.

Riedlsperger said that further planning will be done and decisions made pending the arrival of curriculum information from Stuttgart.

Graphics receives \$20,000 for studying molecules

By KEVIN CANNON
Staff Writer

The Cal Poly Graphic Communications Department has received a \$20,000 grant from Dow Chemical Company to study complex molecules, commonly known as polymers.

The research will be headed by Professor Herschel Apfelberg. "There is a national problem," said Apfelberg. "Dow wants to find a solvent which will not affect the environment."

All of the research will be done using the state-of-the-art Andy 820 flexographic printing press in the press laboratory of the Graphic Communications Department.

Department Head Harvey Leyenson said that the grant is a direct result of Apfelberg's efforts to enhance the visibility of Cal Poly to industry as a leading resource in flexographic technology.

Apfelberg has done extensive writing and speaking on the subject, held seminars and is nationally known for his involvement in flexographic technology.

"They picked me for my experience (31 years) and my interest in chemical research," Apfelberg said that he likes bringing applied research to Cal Poly.

Three student teacher assistants — Scott Bauder, Criss Johnson, and Stan Kelly — will be assisting Apfelberg throughout the project while learning from the research.

Bauder, a graduating senior, said he is looking forward to the experience and is "very proud and honored to be working on this project with Professor Apfelberg."

Apfelberg is excited about working with the students. "I enjoy being able to share and help them learn scientific method."

Pending the outcome of this initial research, a second grant may be issued to continue testing and assessments.

Apfelberg said, "This allows me to use my education and knowledge for the benefit of society." Apfelberg said he is also pleased to help the students involved.

The Newspaper Production Crew would like to say:

Thank You Plant Operations

for the excellent job on the lab shelf and hangers.

Senior English major Karen Trigueiro communicating through sign language. Trigueiro, whose father is deaf, learned

sign language before she learned to speak.

CINDY BLANKENBURG/Special to the Daily

Father deaf

Student learns to 'sign' before learning to speak

By AVA YEE

Special to the Daily

"They thought I was mentally retarded," recalls senior English major Karen Trigueiro, whose first language was sign language.

Having a deaf father, Trigueiro's experiences with learning to speak were quite different from those of other children — not to mention frustrating.

Unexposed to the sound of words and speech, she was unable to make any sounds when she attempted to speak. As a result, schools labeled her as mentally retarded.

The teachers she had while growing up in San Diego could not understand why she would not speak.

"The teachers kept telling me to use my voice," Trigueiro said. "It was frustrating because I didn't know what they meant."

Trigueiro said that because she could not respond to someone telling her to "Use your voice," she was immediately tested for deafness. However, it was discovered that she had exceptional hearing.

At this time, she learned sign language from her father in order to communicate. It was realized that she was not mentally retarded, but had only learned a different way to communicate. She then began intensive speech therapy.

"It was so long ago, it's hard to remember details. But I do remember learning my first word, 'ball.' They kept repeating the word."

After learning to use voice in her language, she returned to public schools. However, out of the habit of using sign language in her home, she naturally "signed" while speaking in school, but

this method of communication was frowned upon and discouraged by her teachers.

"I had mean teachers," Trigueiro said. "They would slap my hands with a ruler. They made me sit on my hands."

Trigueiro commented that at that time schools for the deaf weren't using sign language. They were trying to teach deaf students to articulate voice which was spoken. "They didn't want me to be different," she said.

At the age of ten, she began tutoring deaf children in her father's classroom at Parkway Junior High School. She tutored until she was 18 years old, and said it was a rewarding experience.

"I felt I was worth something. It was the first time I didn't feel stupid. The kids actually learned from me and that was exciting."

Trigueiro said she feels her past situation has made her especially respectful toward the handicap.

"I can also accept 'different' people."

Learning sign language is very much like learning to speak a foreign language as one can become fluent in it. "Other deaf people often think I'm deaf and not my dad," said Trigueiro who feels this is a compliment.

After graduating, Trigueiro would like to be a full-time teacher for deaf children. She said she feels deaf students should learn total communication skills, but shouldn't be expected to form perfect sounding words. "One can't hide the fact that he or she is deaf."

Although embarrassed to tell about her experiences learning to speak, she laughed and said, "Somebody probably thinks I'll make a good research project."

Students 'learn by doing' in steer implant project

By NOWA CONDLEY

Special to the Daily

The Cal Poly motto of "learn by doing" can clearly be applied to one student's interesting and applicable senior project.

"You invest your time and get something back out of it. It's a learning, management type of senior project," said Debbie Svetich, a 23-year-old senior Animal Science major.

The activity is known as the Walters Enterprise and Applied Research Project. The project consists of measuring the duration and efficiency of ear implants as a growth stimulant in 126 steers. The object is to test two different kinds of implants to see if they help feed efficiency and act as a growth stimulant in the steers. The duration of the results is also measured.

Five students are on the Walters project. Once every 60 days they re-implant the growth stimulants and gather and process collected data. Two people must ride-check the operation once a week.

"I never knew much about implants, but on this project you have to do it yourself. The more you're around it the more you learn. You take part in the decision making," said Svetich.

Each of the students is involved in every aspect of the project.

Not only do the students refine their management skills, but they get a chance to make money too. At the end of the project the cattle will be sold. "We get a share of the profits, especially if it rains enough and they gain enough weight."

"When the project's over, I'll feel like it was a big accomplishment and it might help in finding a job if I choose to go into cattle," said Svetich.

The Walters project began Nov. 30, 1984 and will continue until June 8. It is located near Cuesta College close to the Escuela Ranch. Adviser to the project is Animal and Veterinary Science professor John Stechman.

Visited photographers

Students gain insight from trip

By PATTY GARRISON

Special to the Daily

Cal Poly applied art and design students recently visited a group of professional artists at work.

Last month photography option students visited Los Angeles to mingle with three top commercial photographers and representatives from Los Angeles advertising agencies.

Eight student photographers, lead by instructor Eric Johnson arrived on a Thursday morning at Marsteller advertising agency accompanied by Dan Piel and his graphic design students for an opportunity to engage in and evaluate a top California advertising firm.

Marsteller is nationally known and is one of the top 20 agencies in California, serving more than 70 of the Fortune 500 corporations.

A representative from the agency gave the students firsthand advice and let them review their own slide show representing such clients as Beatrice, Blue

Cross, Chanel, Dannon, Flying Tigers and Spiegel.

Next on the agenda for Thursday was a Richard Noble photo session. He was shooting an international ad for Winston cigarettes. Noble is known for his Miller Beer and Virginia Slims ads. Noble shared his studio with the Poly students and let them

peek at recent unpublished photographs and his private photo-art he does in his spare time.

After summing up his vigorous day of shooting for 5 hours and 27 rolls of film, Noble signed and presented to each student one of his unreleased personal lithograph posters.

The following day, the students visited Reid Miles' studio in Hollywood. Representing Miles was his assistant Wayne Adams. Miles, known for a style reminiscent of the late artist Norman Rockwell, has won several Cleo

awards which are given to top advertising agencies. He often uses actors and actresses in his group of orchestrated arrangements.

Miles let the students roam through props and paraphernalia while Adams explained stage screens the company conceived.

After viewing his complete portfolio of prints, slides and video commercials, it was back to the 90 degree weather and into the world of photographer Robyn Riggs.

Riggs is well known for his action-packed motorcycle posters and advertisements.

Watching, listening and going through shootings with these professionals gave the students an insight they said cannot be gained in the classroom.

"I feel this field trip was an everlasting success. All the behind-the-image work you never knew existed astonishes me," said one student.

Poly netters have winning weekend

Men ranked third,
hope for winning
trip to Nationals

By NANCY ALLISON
Staff Writer

Cal Poly's men's tennis team suffered its first conference loss Sunday, against No. 2 ranked Chapman College, 5-4.

The loss came after two conference wins, the first over Cal State Northridge, 6-3 Friday, and the second against Cal Poly Pomona, 9-0 on Saturday.

The match was tied up 3-3 against Chapman, after Poly's Paul Landry (No. 4), Bob Zoller (No. 5), and Tom Salmon (No. 6) turned in singles victories.

In doubles the Mustangs won at No. 2, when Landry and Dave Reynoldson defeated John Soldat and Paul Wekesa 3-6, 6-3, 6-1. But Poly's No. 1 and No. 3 doubles were not so successful, dropping close matches to their Chapman opponents.

Rob Pritzkow and Tom Salmon (No. 1) gave up four set points in the second set, to lose 7-5, 7-6 to Troy Turnbull and Terry Davis, while Bob Zoller and Brian Bass at No. 3 lost to John Kline and Chris Dundas, 4-6, 6-4, 6-3.

Coach Hugh Bream was pleased with his team's performance. "We played well, but they did also. It was just a great match."

Bream thinks Poly has a good chance of meeting Chapman in the finals of Nationals. "One or two points in any match could have swung it the other way on Sunday," noted Bream.

Individually, the Mustangs had some impressive performances. Bob Zoller, playing No. 5 singles, won all three singles matches over the weekend, as well as the No. 2 doubles team, Paul Landry and Dave Reynoldson. Poly's No. 1 singles, Brian Bass, played at 100 percent capability for the first time, after suffering injuries all season, said Bream. "Having Brian back really gave us a lift in singles."

The No. 3 ranked Mustangs are 9-2 overall, and 5-1 in conference

DEANNA MORRIS/Mustang Daily

Rob Pritzkow prepares to take on Hayward State Thursday. The Mustang men are ranked third.

after the competitive weekend.

They host 8th ranked Hayward State this Thursday at 2:00 p.m. Hayward features the No. 1 doubles team in the nation, as well

as two singles players in the top 20. "This is a real important match for insuring a full team bid to Nationals," said coach Bream.

Women take on
the elements,
win fifth straight

By NANCY ALLISON
Staff Writer

Despite 25 mile-an-hour winds, the women's tennis team breezed by Chapman College Saturday to run its winning streak to five matches.

The Mustangs secured all six singles matches and were half-way through doubles when the rain fell in Orange County, closing the match out 6-0 for Poly. The win is the second in eight days for Poly against conference opponent Chapman. In the two teams' last meeting, Poly sacrificed only two games in the entire match, but Saturday the Mustangs gave up a total of four.

"The team played well under very poor conditions," commented coach Orion Yeast.

Poly's record stands at 5-3 overall and 3-2 in conference with three tough conference matches coming up.

The team travels down south this weekend to play U.C. Riverside Friday and Cal Poly Pomona on Saturday. The Mustangs defeated Riverside easily in their first conference match of the year, but found a little more trouble with Pomona, who beat them 6-3 earlier in the season.

"We'll be practicing intensely this week to prepare for our rematch with Pomona," said Yeast.

"Things are definitely looking up. I think we can beat Pomona this time around, if we play up to our potential."

If the Mustangs do indeed beat Pomona, they will be tied for second place with their sister school, behind first place Cal State Northridge.

"We're still in the race. There's no reason why we can't give Northridge a run for their money next time," said coach Yeast.

The team's next home match will be after its encounter with Riverside and Pomona, on Tuesday, March 12. The netters will take on conference opponent Cal State Bakersfield at 1:30 on the Poly courts.

Poly sprint team built with fast Carpenter

Community College transfer brings 12-years of track experience to team, has big plans for after college

By NANCY ALLISON
Staff Writer

Speed has returned to the Cal Poly women's track team.

It takes the form of Patrice Carpenter, a 19-year-old transfer from Contra Costa College in San Pablo.

She was the 1983 Community College State Champion in the 100 meters, and potentially Poly's fastest woman ever.

Carpenter has been running for 12 years, having joined the Hill Top Track Club in her hometown of Richmond, at the age of 7. Her first year on the team proved unsuccessful.

"We were the pits," she said. "Then the next year we went to the National Championships, and went every year after that until I was 14."

At DeAnza High School Carpenter placed 4th in the 100 meters as a freshman, but quit track after her sophomore year and moved to Hammond, Illinois, to care for an ailing grandmother.

She moved back to California and resumed running after high school. "I had to get back into running to keep my mental peace," said Carpenter.

Carpenter was highly recruited after a two-year stint at Contra Costa. She chose Cal Poly over such schools as USC, UCLA, University of Arizona, Cal Berkeley, Oregon State and others, primarily for Poly's successful track record and its academic reputation. "My time for fun is over. It's just going to take so much work to fulfill my goals."

Among those goals are hitting a mark of

11.29 in the 100 meters this year. "If I can do that, I'll be able to fulfill my long range goal, which is to hold a world record by the time I'm 21."

Such high aspirations are within Carpenter's realm, according to coach Lance Harter. "Patrice definitely has the talent and direction to be one of America's finest."

Beyond her running career, Carpenter hopes to become a sports psychiatrist to world class athletes, yet she plans on continuing competitive running at the same time. She would also like to travel and then start a family of eight children. "When people hear how many kids I want, they tell me I better start right now...but I've got time," she said.

The runner comes from a tight-knit family, consisting of a mother and a brother. Her mother is a dialysis nurse in Richmond, and her 17-year-old brother is a brown belt in karate.

According to coach Harter, the sprinting program has greatly improved this year with the aid of Carpenter, Felicia Saville, and Veronica Storvick, three of the top runners at the Junior College level. Carpenter said, "we are hoping to break the school record this season in the mile relay," adding other records could fall.

The confident, enthusiastic athlete expects a dynamite year.

"I know the team has won the National Championship four years in a row and I have a pretty good feeling we'll win it again. We have a great long distance program, and now we have sprinters!"

CONNIE ADAMS/Mustang Daily

The addition of Carpenter helped bring speed to the long-distance track team.

Call him Strange, call him rich

CORAL SPRINGS, Fla. (AP) — There will be no apologies from Curtis Strange for not entertaining his fans. He entertains himself well enough with cold cash.

"I'm very serious on the golf course," he said. "This is a pretty serious business."

"Look, I just picked up a check for" — he paused and spaced out the words — "ninety... thousand... dollars."

"You think that isn't serious?"

"I can't be laughing and joking all the time. That's not the way I am. I used to kind of try to make up for it. But I don't any more. That's not the way I am."

"I just go in with the attitude, that's the way I am and I can't do anything about it and the hell with you."

Strange, 30, a nine-year veteran of the PGA Tour, obviously was nettled about a

question concerning his personality. The query came in a mass interview following his weekend victory in the Honda Classic, a playoff decision over his good friend Peter Jacobsen. The questioner noted that Strange had, in the past, been the object of published criticism for lack of color.

"Curtis has had a bad rap from the press," said Jacobsen, an articulate, outgoing personality.

"He doesn't deserve it. He's a true gentleman and a credit to the game of golf."

"I'd hope the press would take another, better look at him and give him the credit he deserves."

"Strange said he had, at one time or another, attempted to change his image. 'I tried to make up — maybe that's not the right way to say it — for the way I am,' he said."

"But I can't change."

"I have to play my game the way I play it."

"We all have our own personalities. We can't all be like Peter. I wish we could. But even he isn't always laughing and joking. Not coming down the stretch. (Lee) Trevino isn't making a lot of jokes when he's trying to win a golf tournament."

"Anybody tells you they aren't nervous, they're lying."

"I know I'm serious on the golf course. That's the way I am."

"We come into a town and we see these stories about 'clones' and everybody looking and acting alike. We see it all the time. That's the easy story to write. It'd be harder for the press to find out what a player is really like."

He grinned.

"Hei'm a hellova guy, a lot of fun, when I get a couple of beers in me."
