City votes to support voice for students

By Stacey Myers
Staff Writer

The San Luis Obispo City Council voted unanimously Tuesday to support an ASI-sponsored committee which will act as a voice for students on city and university-related issues.

ASI President Kevin Swanson said the student-liason committee will provide a constant source of input to the City Council and other government organizations on issues concerning students.

"This committee will increase student influence in the community," said Swanson. "It's a way to show the community that students are responsible and are concerned about what goes on in San Luis Obispo."

Swanson also thinks the student committee will be able to influence the council when election time comes around.

"If the committee makes the city aware of the issues we're concerned about, and then forces the candidates to take a stand on those issues, we could really make a difference," he said.

Mayor pro-tem Robert Griffin said the council was pleased to endorse the idea of the student committee.

"This group will be involved with resolving issues which concern both the students and the city," he said. "I think it's a great idea."

Now that the committee has been approved by the City Council, Swanson said it needs to be approved by the Student Senate.

If the senate approves the committee, Swanson said it will be formed in about one month. The members will consist of the ASI president, the chairpersons of the Panhellenic and Intra-Fraternity Councils, the student member of the Chamber of Commerce, the chairperson of the Student Senate and the

Cal Poly suffering from design problems

By Ken Miller
Staff Writer

A beginning freshman is driving to Cal Poly to see the campus for the first time. She crosses over the railroad tracks from Foothill Boulevard and asks a passing stranger where Cal Poly is. The stranger looks at her funny and says, "Under your feet!"

Lack of campus identity is just one of Cal Poly's design problems, according to department heads and professors in the architecture and environmental design department.

Mike McDougall, a professor in city and regional planning, said improper planning is the problem. "A good plan allows a person to sense where he is, but around here it's very easy to get lost. There are no signs designating Cal Poly's boundaries if you come in from Foothill," he said.

"I've worked on other campuses and the administration building, the library, and the student union are usually grouped together in the center of campus. Also, the campuses are often in discernible boundaries: the agriculture department here, the business department there, etc. Here, everything's scattered all over. The student union (U.U.) and Administration Building seem to be off-center, while the library's way across campus."

"Here at Cal Poly we live in a really superb climate. How come we don't have any outdoor teaching facilities? Most of our buildings were designed for North Dakota," he said.

Lack of art on campus is another of McDougall's complaints. "We need something like the sculpture gardens at UCLA. All we have here is a mustang (statue) up by the Administration Building. We don't seem to have anyone willing to say, 'Hey

look, we should have some art and design on campus,' " he said.

Gerald Smith, department head of landscape architecture, said that not enough attention has been paid to space planning.

"We have little fragmented pieces of land all over, most of them unsightly. The only nice pieces of land are the lawns by the Science Building and the Dexter Building, where association can occur. If the Dexter lawn were taken away it would take away the campus integrity," Smith said.

Smith said the campus needs a hub of activity where people can congregate, and for this he suggests tearing down the Science Building. "There have been no efforts to get rid of that octopus, so I don't see the campus changing. I think it's incredible that we're able to build these extra buildings, because there's a ceiling on enrollment growth here," he said.

Mike Martin, department head of architecture, said that there doesn't seem to be an overall plan for the campus, even though Cal Poly's master plan is updated every five years or so. "There's a lack of coordination between the physical form and the spatial connection between buildings. The leftover pieces of land seem to be just that — leftover, not planned," he said.

The only significant piece of architecture on campus is the University Union, according to Martin. "It was thought through, and it's a nice place to be in. The other buildings on campus are satisfactory, but not excellent. There are also some ugly buildings, like the air conditioning building."

Mike Botwin, department head of architectural engineering, said that in general most of the buildings on campus are dismal,

IN QUOTES

I have tried, too, in my time to be a philosopher; but, I don't know how; cheerfulness was always breaking in.

— Oliver Edwards

Reagan is biggest problem

Earth must be preserved

By Ken Miller
Staff Writer

Understanding what people are doing to the earth is the biggest problem the world faces today, said a Scottish writer, filmmaker, landscape architect and regional planner.

Ian McHarg spoke Wednesday to a capacity audience in the Cal Poly Theatre. His topics included everything from nuclear war to post-modernism in architecture, but his main concern centered on preserving the earth by whatever means necessary.

"Possibly the biggest problem our earth faces now is the president we have. Reagan is antithetical to the environment. His philosophy

See EARTH, back page

on the street

Would you sell a younger sibling on Cal Poly?

Kym Horner, physical education senior:

No, I would recommend UCLA, because there's more fashion and more things to do.

Richard Redos, graphic communication senior:

I would recommend it if they were going for a technical major. But for anything else I wouldn't.

Jeff Dankwerth, industrial engineering freshman:

Yes, I would. In fact, I did recommend it to my younger sister. She's involved in track and they have a good program here. Also this is one of the best state schools.

Alison Kelley, chemistry junior:

I would if it weren't so conservative. I don't think there's enough versatility in the ideas of the students.

Confessions of a depraved addict

I have a confession to make.

My name is Stacey and I'm a TV game show-addict.

I know journalists are supposed to be attached to the Cable News Network by a cable umbilical cord, but I can't help myself. I just love TV game shows.

I love to watch middle-of-the-road people win thousands of dollars for only 30 minutes of work.

I think it's great that school teachers from North Dakota can make money by using bits of important knowledge that otherwise might lie dormant for years.

"Jeopardy!" is the unchallenged monarch of the game show world. The show requires contestants with real intelligence, awards cold hard cash instead of useless prizes and Alex Trebek has never told a stupid joke on any show I've ever seen.

Where else would you find out that only about one in 10 million sea creatures escapes being eaten? Or that barnacles were once thought to be spontaneously generated from the feathers of sea birds? This is truly an educational show.

"Scrabble" is another worthy member of the TV game show hall of fame. Although the show is more like a giant crossword puzzle than the true Scrabble

REPORTER'S NOTEBOOK

Stacey Myers

game, that doesn't seem to bother the contestants or the viewers. In fact, I haven't figured out if it's the show I like so much or just that handsome devil from "Love Connection," Chuck Woolery.

And what discussion of game shows would be complete without mentioning that staple of the game show addict's diet, "Wheel of Fortune"? The daytime version (where Vanna White wears casual daytime clothes) doesn't award prizes as extravagant as the nighttime version (where Vanna wears evening gowns), but they're both entertaining and even occasionally challenging.

One of the best things about "Wheel of Fortune" is that Pat Sajak knows it's just a prime-time version of hangman and he never takes the show too seriously. Thank goodness.

I guess I like TV game shows so much because it gives me a good feeling to know that normal people can make lots of money

without looking or acting like human mutants.

That's not to say that human mutants never appear on game shows. I think that's a formal requirement for half of them.

"Card Sharks" is a prime example of mutant drivel. To qualify for this show I think the contestants have to have an I.Q. of less than six. It can't take much more to know that if the card showing is a two, the next card will probably be more than that. Seriously.

Of course, the *worst* when it comes to game shows (now that "Family Feud" is out of the running) is John Davidson and "The New Hollywood Squares." This show makes me cry. Not from laughter, but because I feel sorry for all those has-been celebrities who have to sit up there on the giant tic-tac-toe board and listen to each others' tired and predictable one-liners. At least the viewers can save their sanity by turning the volume down.

It's not as bad as it seems, though. As long as I'm able to push the buttons on the remote control, I'll never have to suffer through another minute of Bob Eubanks.

Stacey Myers is a journalism senior and is constantly trying to buy a vowel.

letters to the editor

Students responsible for available classes

Editor — In regard to the editorial "They can't hear us" (Feb. 11), I have a question: Since when does the editorial staff of the Daily advocate student apathy? I find it difficult to believe that you just assume classes will be offered. Shouldn't we students be a major part of determining our curriculum?

The Administration exists to ensure a smooth-running campus — not to protect the interests of students. By assuming the Administration will take care of classes we are in effect saying we still need to be led around and told what to do.

Let's not let our busy academic schedules prevent us from getting

the academic courses we need. We've been "screaming" for a few years now, let's stop screaming and do something more constructive. Letters, petitions and phone calls can help ensure we won't have to continue facing the dilemma of two empty seats and 20 people waiting on each. Come on Daily, remember the old saying "If you want something done right, do it yourself."

LORI J. VIX

Concerned reader lauds individualistic engineer

Editor — Let's hear it for Chris Anderson! Regarding the article concerning the moral dilemma of engineering students in the age of nuclear weaponry (Feb. 12), it's comforting to know there are some

high-tech students of the 80s who refuse to place a price tag on their ethical standards.

Unlike some of his colleagues quoted in the article, Anderson obviously realizes the societal danger in the old, "if you can't beat 'em, join 'em" attitude.

LYNN A. WEATHERWAX

Bakoans mighty proud of their little nirvana

Editor — Like Donna Taylor (Reporter's Notebook, Feb. 12), I too, am from the Bakersfield area. Reading her article, "There's no place like home," brought back such powerful memories that this past weekend I hopped a bus and went to San Francisco.

Committee is against Contra aid

WASHINGTON (AP) — The Senate Foreign Relations Committee voted 11-9 Wednesday to halt U.S. aid to Nicaragua's anti-government guerrillas in the first major test of sentiment in the new Congress toward the Contras.

However, even supporters of the measure conceded President Reagan will veto it if it passes the House and Senate.

"I think we have the votes on the floor to pass it, but of course the president will veto it and I doubt that we can override the veto," said Sen. Claiborne Pell, D-R.I., chairman of the panel and an opponent of Contra aid. No action by the full Senate is likely for several weeks, he said.

Deukmejian names new justices

SACRAMENTO (AP) — Gov. George Deukmejian on Wednesday appointed three new justices to the California Supreme Court, giving the Republican governor a decisive majority on the seven-member tribunal.

Deukmejian named John A. Arguelles, 59, of Irvine; David N. Eagleson, 62, of Long Beach, and Marcus M. Kaufman, 57, of San Bernardino — all state appeals court justices — to the high court.

They bring to five the number of Supreme Court appointments Deukmejian has made. Earlier, he appointed his former law partner, Malcolm Lucas, as chief justice and named Edward Panelli as an associate justice.

Students build Challenger replica

By Stephanie Flahavan
Staff Writer

Members of the Cal Poly student chapter of the American Welding Society will soon begin building a replica of the Challenger space shuttle for the Challenger Center in Washington, D.C.

The project is under the supervision of engineering technology professors Ken Brown and Richard Strahl. "Having the students build a replica of the Challenger occurred to me on the anniversary of the shuttle accident," said Brown. He received confirmation recently from a representative of the center that it is interested in a hand-crafted replica.

This will be the second replica designed and built by AWS and the welding technology department. The first was built four years ago.

Brown said the project is the perfect way for students to show involvement in the welding department. "Students often tell me that they want to feel like they have made a difference while they were here," he said.

The students are motivated to make this replica better than the last one because it is a memorial. "We plan to put more heart and soul into it," said Angelo Guinasso, a welding technology student and AWS Poly Royal representative. Brown add-

ed, "The model will have the names of the seven late astronauts stenciled on it."

Making the replica will "bring recognition to our department and will be a contribution to the astronauts who died in the Challenger accident," said Chuck Wong, welding technology student and vice president of AWS.

Guinasso said he would like to see the project far enough along to exhibit it during Poly Royal. The likelihood of this has not yet been decided because of the number of hours required to build the model. "The first replica took 2,500 manhours to complete," said Brown.

The shuttle replica will be much like the one built previously by engineering technology majors with an option in welding technology.

The physical dimensions of the original shuttle replica were one-ninth of the size of the actual Challenger. On the second model, Wong said, "the design and insignias will be more realistic than the first shuttle model made at Poly."

The first replica is mounted on a pole at Vandenberg Air Force Base at the front entrance of base operations. After housing the replica for four years, Vandenberg will formally receive the shuttle model from Cal Poly in a ceremony Feb. 21 at the base.

"Are You Still Using Just A Pencil & Paper?"

Hi,

I am Rob Ginsberg, a Cal Poly Student like yourself. I believe a computer system will improve your grades, and help you obtain your career goals. I offer the lowest prices in SLO County, simply because I understand, all too well, what it is like to live on a budget. For your added convenience, I have installed a toll-free number for your parents or friends that are interested in a computer and have questions, (800) 722-0233. Please call me to set up an appointment for a free unpressured demonstration.

Once you use a computer you will wonder why you didn't buy one sooner.

Sincerely,

Rob Ginsberg

Liberal Education

A narrow major might guarantee a good job right out of college, but climbing the corporate ladder later on may prove to be more difficult

Story and photo by
Matt Weiser

MOST PEOPLE see college as a ticket into a job, and usually a high-paying one. Perhaps a traditional motive is simple education: becoming a "well-rounded individual."

But this goal of a liberal education has been set aside in recent years by people seeking a higher payback on the high cost of their education. Some believe this career-focused education is creating a talent gap in the business world that employers are slowly beginning to recognize.

But at this point, businesses are still hiring based on specific job skills, and may not fully recognize the potential of a liberal education. The four or more years that go into a degree and that final, all-important piece of paper are road signs that some employers merely read on the surface as "experience" and "commitment."

But what about seven or 10 years from now? How valuable will that degree be, and where will its owner be in the overall scheme of the corporation and the world? Most people in a position to know will say that it depends on the material that created the degree, particularly the liberal arts material.

Robert E. Beck, assistant vice president of human resources for American Telephone and Telegraph Company, recently summed up the results of a survey by his company. The survey followed and tested a total of 626 employees throughout their careers at AT&T, spanning a period of 25 years. The results showed that people trained in the liberal arts advanced to a higher level in the company faster than those trained in business or a technical field. The reason for this, according to the study, is that the liberal arts majors possessed the communication and people skills necessary for management.

"On all three dimensions — leadership skills, oral communication skills, and forcefulness of personal impact — the humanities and social science majors were clearly ahead," said Beck. "Weakest were the engineers and the math and science majors. The humanities and social science majors had self-concepts which promoted standing out from the crowd as leaders."

Cal Poly English professor Michael Wenzl said one of the advantages of an education in the liberal arts is that it does not limit understanding by confining problem solving to a specific application. It teaches basic mental operations that can be applied to any situation, he said.

"Education is supposed to be a process of opening up the latent talents that are in the minds of all humans," said Wenzl. "If you scratch a history major hard enough, what you've got is a person who simply didn't want to limit himself at a particular point in his life."

Wenzl agreed with the AT&T study, saying liberal arts majors have an advantage in management, even over those who majored in management. "Most of the big, hot managers are liberal arts majors," said Wenzl. "Management is based on an understanding of what humans are like inside. The thing that teaches you the most about that is literature. You learn more about human behavior in Shakespeare than you can learn in any other way."

The problem of a narrow education, Wenzl says, is cultural. Students feel that if they don't have a specific job in mind, their time at a university will be wasted. Wenzl believes the opposite is true, and that a short-term economic decision is a mistake.

"The cultural, widely-held belief is that if you major in engineering, all these doors are going to open up for you in five years," he said. "But 10 years from now you're going to be on the psychiatrist's couch. You'll probably be in the same job you were in when you started because you lack the skills in language."

'Our primary focus ought to be on education of the whole person'

— Glenn Irvin,
university dean

Shel Burrell, associate director of the Cal Poly Placement Center, said that in 1986 only 2 percent of all Cal Poly students were still seeking employment after graduation. She said this indicates that a college education does what it's supposed to do by creating employable candidates.

"Usually people-handling abilities are the thing that will be most lacking in a technical major," said Burrell. "The technical companies feel that they want somebody that comes out trained to do their job, and are not as in favor of a liberal arts curriculum. But, I think Cal Poly's mission is that this is a college institution, and we aren't trying to turn out technicians. We are trying to

On the road to a degree, students may miss a crucial part of their education

turn out well-educated critical thinkers who are going to be capable of adapting and changing and evaluating their situation."

University Dean Glenn Irvin said it is an uncertain economy that leads students into specific majors with specific job opportunities. He said American education has always been highly vocational in thought, with an eye toward practicality and utility. But Irvin said the needs of business should be secondary to the needs of the student.

"I'm after education, and the credential is a separate matter as far as I'm concerned," Irvin said. "Our primary focus ought to be on education of the whole person."

Irvin said liberal arts majors have dropped off "dangerously" in the past 20 years, but business is again becoming aware of the skills that a liberal education provides. These include the ability to write, speak, communicate with others, handle abstract concepts and synthesize information. These abilities are becoming more and more valuable as their absence becomes more obvious, and businesses are beginning to seek them as they find them lacking in their current employees.

"When I talk with people in technical areas they'll tell me that one of the things they look for all the time in prospective employees is the ability to communicate. That's absolutely essential. Don't ever overlook the connection between verbal ability and intelligence," added Irvin.

But at this stage in the game, Irvin said, the problem is that

business is talking out of both sides of its mouth. They say that they want people with more liberal education, but when it comes down to the job interview, they still want to know mostly about the specific, specialized education and experience. When business starts asking students about their communication and people skills, Irvin said, the change in educational priorities will come fast. "Students are nobody's fool, and they're going to give their recruiters what they want," he said.

One Cal Poly professor who hopes to help his students get the jump on business is James Harris, head of the electronic and electrical engineering department. His department has designed a pilot program that he hopes will make the general education requirements more effective and meaningful for the students.

Harris said students have a tendency to take whatever general education class will fit their schedule, without regard for its content or importance. So, beginning last fall, all incoming E.E. and E.L. students are assigned two faculty advisers: one in their major and one in the School of Liberal Arts. The students work with their liberal arts adviser to focus the requirements into a more coherent group of courses, such as history, a language, a culture or a type of literature.

"What we're trying to do is to take the number of units that we have allocated to the liberal arts and to realize the potential in them," said Harris. "What we're focusing on is the education of

the student, both from a liberal arts standpoint and an engineering standpoint. It seems to me that's the best of all possible worlds."

Harris said that after engineers have been working in the industry for five to 10 years, more responsibility will come their way, and that responsibility is going to be people-related. "It's at that point in a person's career as an engineer that I think the liberal arts education starts to become very, very important," Harris said. "Because we have such an impact on society as engineers, I think it's important that we understand society. If there's too much of a focus on preparing for a job, the student doesn't know the first thing about the world they live in."

Wenzl, who was the chair of the general education and breadth committee on the Academic Senate for three years, said the current core curriculum is the best that Cal Poly has ever had, although it is limited in the subjects that it covers. He would like to see the number of choices in the curriculum become more limited so that people would have a "common cultural fund of knowledge" on which to relate with each other. "The common cultural fund now is being provided by mass media, and that is not a good thing," Wenzl said.

The worst thing about Cal Poly, said Wenzl, is that it prevents intellectual exploration by requiring a major at entrance and by having an overly rigid curriculum. He thinks Cal Poly should require all majors to come up with a large body of electives that would allow students to follow their curiosity and interests.

"Cal Poly has a very intelligent student body," said Wenzl. "I don't think you take intelligent people and put them in an intellectual straightjacket."

There is also a problem with liberal arts majors getting too concentrated in the liberal arts, according to Irvin. He thinks Cal Poly should demand more math and science from its students, particularly from liberal arts majors.

"The problem is narrowness, and it can pop up anywhere," said Irvin. "The dominant mode of thinking in western culture is scientific. If you don't understand that, you're at a tremendous handicap."

Burrell, who also served on the general education and breadth committee, said, "On the whole, that general education background is helping turn out better decision-makers for the future," said Burrell. "That's a very strong point in Cal Poly's education. They don't knuckle under to industry's demand to turn out a technician that is not going to be able to adapt to future changes."

"I have never heard an employer complain about the quality of the applicant," she added. "On the whole, once they have hired a Cal Poly graduate, they are never disappointed and they would always be coming back to hire more."

Mustangs impressive in 19-8 win

By Dan Ruthemeyer

Sports Editor

CLAREMONT — After averaging just over five goals a game in its first three contests, the Cal Poly lacrosse team exploded for 19 on Saturday to beat the Claremont Sagehens 19-8.

For the Mustangs, it was a time for many parts of their offense to come together, as 10 different players made their way into the scoring column. The win evened Cal Poly's record at 2-2.

Cal Poly coach Pete Riolio attributed the 19-goal performance to an offense which showed its ability to move the ball.

"The more movement you show the more your guys are going to get open for the score. It's the basic premise of any team offense," he said.

Heading the list of Mustang scorers was Pete Leonardi, who tossed in three. The three-goal

performance was the second in two weeks for Leonardi, who topped off his performance last week against Santa Clara by scoring the winning goal with one second left in the game.

Aside from running an offense that featured strong picks set up out in front of the goal, the Mustang defense kept the Sagehens from mounting any serious offensive threat against Poly goalie Marc Mathias who had to make only one save in the first quarter and six on the day.

After the Mustangs held a 5-1 lead at the end of the first quarter, the Sagehens scored two in a two-minute span in the second to draw within two and threaten the Mustangs' lead.

Cal Poly, however, responded to the threat and scored two goals to close out the half with a five-point lead.

In the opening minutes of the second half, Claremont converted

on a goal attempt to draw within four but that was as close as it would get, as the Mustangs outscored them 4-1 in the third quarter and 7-2 in the fourth to come up with the easy win.

Although still maintaining its offensive intensity, the Mustang defense had a lapse in the third quarter, allowing the Sagehens to tally several goals.

"We were playing too aggressive on defense and tried to get the ball away when we didn't have to," said Riolio.

After suffering their short defensive lapse, the Mustangs came on to score five goals during a 17-minute span in the final quarter to reassert themselves.

Kyle Marshal, who scored three goals in the Mustang's win over Santa Clara, was held scoreless in the first half, but came on to score one in each the third and fourth quarters.

Math major's death is mourned

Katrina J. Killgore

By Stacey Myers

Staff Writer

A 21-year-old Cal Poly woman died Monday from a brain hemorrhage, a county health department spokeswoman said Wednesday.

Katrina J. Killgore, a junior math major from Santa Maria, was taken to French Hospital Thursday after she complained of dizziness while exercising at Maloney's Gym, said Pam Murray, a friend and former roommate of Killgore's.

After several days of observation, Killgore died Monday at 12:45 p.m.

Murray described Killgore as a

happy girl who was always ready to have fun.

"She was a great athlete," said Murray. "She was the star of Greek week for us last year. She was in great shape."

Murray added that Killgore had many friends and will be missed very much.

Killgore was a member of Zeta Tau Alpha sorority and active in Newman Catholic Fellowship.

Burial services will be held at 10 a.m. Thursday at Mary Gate of Heaven Mausoleum at the San Luis Obispo Mission cemetery. Magner-Maldney Funeral Home in Nipomo is in charge of arrangements.

CAMPUS

From page 1

saved only by the landscape. "They're obviously built by the lowest bidder. The most blatantly ugly buildings are the Administration Building and Computer Science Building; they're institutional-looking," he said.

Another problem at Cal Poly is building signage, or the lack of it, Botwin said. "WOW is so that students can become familiar with which buildings are which; maybe the faculty should go through WOW too."

Botwin is currently on an ad hoc committee dealing with the physical aspects of classrooms at Cal Poly.

Jim Rodger, department head of construction management, said he would like to see more projects funded for campus. "Too often the money for these projects comes out of the students' own pockets. There are a lot of projects we work on that enhance the space at Cal Poly,

but it takes so long because of all the red tape we have to go through," he said. "We need more money and fewer obstacles from the university."

Executive Dean Doug Gerard said that funding projects on campus is not as easy as it might seem. "We can only get funding by submitting a request 15 to 18 months prior to the time the money will become available," he said. "Elaborate justifications for the projects must be made also."

Gerard said that Cal Poly's "batting average" is that one in every five or six projects suggested is eligible. "Each year the total amount in funding requests is \$1.7 million, but we get about \$250,000 to \$300,000. If a project is competing with projects related to safety or benefits to instruction, the probability of its being funded is pretty low," Gerard said.

COMMITTEE

From page 1

chairperson of Student Community Services.

Swanson said some of the issues the committee will take up immediately are establishing better relations with the San Luis Obispo Police Department and looking into the next step in creating a Greek row.

EARTH

From page 1

seems to be, 'Screw the land, screw the people,'" McHarg said.

Post-modernism in architecture is what McHarg sees as one of the biggest problems the earth faces today, because it rejects all the things he holds important. "Post-modernism is equivalent to being a mortician's cosmetician: shaving the body and affixing a smile to the face. It's undisciplined eclectic augmentation without meaning," he said.

McHarg said that he would like to display to the world the consequences of its actions. "It is possible to do this by something called a digital map. We need a digital map to portray the effects of a nuclear war, because no one has ever seen a depiction of a country after a nuclear war has occurred. I'd like to have the whole world digitized," McHarg said.

McHarg called what's happening to the ozone layer comic. "The factor that's caused the breakdown in our ozone is the aerosol cans, which means that our armpit smells are threatening it," he said.

McHarg said that the biblical passage, "Multiply and subdue the earth," is ridiculous. "God may have said many things to the people who wrote the Bible, but he didn't say that. Show me someone who wants to multiply and subdue the earth, and I'll show you someone who's into suicide, genocide, and biocide."

McHarg created a scenario of what the earth would be like after nuclear war. "Everything is destroyed, and the only things living are some algae in a pond. They will soon evolve into man again, but this time, they must come to the common conclusion, 'Next time, no brains.'"

McHarg was born in Clydebank, Scotland. He received degrees in landscape architecture and city planning from Harvard in 1950 and 1951. He currently holds the title of professor emeritus at the University of Pennsylvania, following 30 years as chairman of the department of landscape architecture. He wrote the book "Design With Nature" and made the film "Multiply and Subdue the Earth."
