California Polytechnic State University San Luis Obispo

Volume 52, No. 123

Monday, May 16, 1988

About 300 people were digging KCPR while digging for buried heads at Avila Beach Saturday as part of station's efforts to promote the Talking Head's latest album "Naked." Each doll head was numbered to respond with a prize, including a super deluxe, new compact disc player. Only 15 heads out of 91 were buried when the event was over.

## Merger proposal worries faculty

Small departments could be ignored with College of Arts and Sciences

By Meda Freeman  
Staff Writer

A suggested merger of the School of Liberal Arts and the School of Science and Mathematics has received negative reactions from the faculty of the two schools.

Academic Affairs Vice President Malcolm Wilson and Cal Poly President Warren Baker proposed the joining of the schools into one College of Arts and Sciences at the end of winter quarter. "Exploratory committees" were then formed by each school to gather the opinions of their faculty, as Wilson said the idea would not be pursued without faculty support, said John Culver, interim head of the political science department and committee member.

The advantages of the merger would include better administration of the general education and breadth requirements, increased communication and cooperation between the schools and a chance for the faculty to collaborate on the teaching of GE classes, said Ron Ratcliffe, interim head of the music department and committee member.

"There is a lot of merit in the idea, but the consensus has been against the program," said Culver. The liberal arts faculty were opposed to the idea for several reasons, he said. The change would have a significant, unknown effect on the faculty, which makes them uncomfortable with the idea. It would also have an impact on the faculty's resources and curriculums. The School of Science and Mathematics has five departments and the School of Liberal Arts has 11 departments. When combined, the schools represent about 40 percent of the university's resources, said Ratcliffe.

A common worry by faculty is that the smaller departments would be ignored by the larger college, said Jerry Farrell, math professor and committee member. "We have an excellent dean of the science and math school now that we can go to at any time," he said. "Under the merger, we wouldn't have the benefits we have now. Everybody I talked to in science and math doesn't see a real reason for the change." He also said that opposition of the merger was stronger by the School of Science and Mathematics than Liberal Arts.

The merger was prompted by the resignation of Jon Ericson, dean of the School of Liberal Arts, to take place at the end of the summer. Ericson will be assuming a new position at Cal Poly dealing with international programs. If the merger had received support from the schools, a new dean would have been sought to administer the new college. As it looks now, the university will continue its search for a new liberal arts dean only.

## Summer admissions competitive

Quarter is not 'back door' to Poly for marginal students

By Brenda Suppanz  
Staff Writer

Many students have thought of summer quarter as the "back door" for getting into Cal Poly, but increasingly it has become the way for only qualified students to have a second chance while allowing the university to make the best use of its resources.

Dave Snyder, admissions officer, explained that while about six years ago the summer quarter was an easy way for students to enter Cal Poly, it has become almost as impacted as fall quarter.

"The competition is so tough that unless you're a really qualified student, you're not going to be accepted for the summer," he said.

Although the Admissions Office encourages prospective students to reapply if they were not

accepted for the fall, Snyder said it is not a way for a marginal student to get in.

"We have creamed the pool in the fall," he explained. "Those applying in the summer are probably just below the cut line."

Snyder said that when students are not accepted, they receive a notice explaining that they can reapply for the summer quarter. If they are interested, they are advised to contact the Admissions Office in order to evaluate their chances for acceptance.

"We will be able to give them a pretty good idea whether they will be able to make it if they reapply," he said.

Even though someone may be a solid student, which Snyder defines as someone who comes out of high school with at least a 3.0 GPA and a SAT

## Female sheriff takes duties in stride

Being a woman in traditional man's field presents challenges

By Kathy Campbell  
Staff Writer

Candi Jones can handle it. She can talk a distraught husband out of shooting himself by keeping him on the telephone for eight hours. She can put together a search and rescue operation, sending men and horses into the back country to hunt for lost children or murder victims. And she can deal with the challenge of being one of only two women officers in the San Luis Obispo County Sheriff's Department.

She handles it all so well that she became the first female sergeant in department history.

Jones, 30, was promoted last fall after seven years as a deputy sheriff. She graduated from Cal Poly in 1980 with a bachelor's degree in social science and, having completed the sheriff's reserve academy course as

well, she had a job waiting for her with the department.

Now she's a qualified hostage negotiator and leader of the sheriff's mounted search and rescue team. But from the beginning, she faced not only the traditional challenges of the job but the complications of being a female in the traditionally male field of law enforcement.

Her training officer was a man. "They put me with one of the fellows who had been around for a little while and said 'teach her what she should know.' I worked with him for three months — and about the first month he wouldn't even talk to me."

Today they are good friends. "At the time, he hadn't been around women in law enforcement and had a hard time dealing with it. Once he came around and saw that I could do the job, we worked well together as a team. It was just that initial prejudice and stereotype," Jones said.

But getting a new partner or a new assignment often sends her back to square one with male colleagues, she said.

"It's a unique job. Especially when you're brand new, you have to prove yourself, prove you're on the ball mentally and prove you can handle yourself physically."

Male officers, once past that first trial, have either established their own niche or they've failed probation and are out, she said. But women continue to be evaluated.

"Once she passes that probationary status, she's just not accepted with open arms from the whole crew," Jones explained with a wry smile at her obvious understatement.

After several years as a deputy, a male officer can relax into his role, a luxury women are not allowed, she said. Her experiences training new

### EDITORIAL

## High dose of arms

In a crucial election year that's pushed politicians to adopt aggressive anti-drug stances, the government appears ready to turn to the military. The fight against drugs is indeed a war, but it's certainly not one for professional warriors.

The armed forces are trained to counter foreign soldiers, not drug traders. If they do everything by the book, they will shoot first and ask questions later. Drug trafficking, though, is a crime and must be treated like one. That means arresting the suspects, reading them their rights and granting them a trial — tasks most effectively executed by law-enforcement officers.

The combined manpower and firepower of the police, Border Patrol, Drug Enforcement Agency, FBI and other relevant forces is enough to fight drugs. But like the military, those agencies are plagued by interservice rivalries. Despite the enormous success of two sting operations — they were dubbed Pizza Connection I and Pizza Connection II — conducted by combined forces earlier this year, the agencies still have trouble cooperating. Once they agree on goals (quelch the demand at home) and methods (arrest the buyers along with the sellers), an efficient and convincing crackdown can proceed.

The best way for the armed forces to fight drugs is to clean out their barracks, battleships and bombers. The rest of the war must be left to civilian law enforcement.

## The best of professor potpourri

If there's one thing I know as a full-time professional student, it is my co-workers (teachers).

I call them co-workers because we all are conspirators in the business of education. Teacher and student are equally responsible for building educated people and for making higher education what it is (or should be). But varying degrees of apathy get in the way of this responsibility, and it's not limited to students.

My junior-college teachers were more involved in the education of students than are the teachers I have had at Cal Poly. I would give Cal Poly a lower median rating on teacher performance. This is sad. Most would logically assume that Cal Poly should get a higher rating, what with the higher academic level of the institution inspiring everyone to great deeds.

On the bright side, I can be sure that Cal Poly has more really outstanding teachers. We have a sharp performance peak rather than a fat bell curve. Junior college had a higher level of general excellence, but the really good teachers at Cal Poly far exceed it. They are few great ones, as you are aware, but they are out there.

I have literally stumbled across some awesome talent at this school. It was blind destiny, I guess. I just filled in the bubbles and signed my name and what did I get? I actually got an education. But only thanks to an inspired few who kept me going as I squatted at my desk, awash in the mediocrity spouting from the remaining nine out of 10 podiums.

I'd like to name the inspired few; they deserve recognition. But this would be counterproductive. By inference, everyone else would be terrible and the good ones would be branded and scorned by their floundering but friendly peers. They might get a swelled head. Besides, if I spill it, they will be so much in demand that Cal Poly will prevent mortals from experiencing their wisdom ever again.

Instead, let's look at types. I hate to categorize because I hate to be categorized, but it's a good way to hint around. Here we go.

**THE WARDEN:** "This is my class and you better not forget it." The warden is right and you are wrong. Fond of seating arrangements, attendance and regulations of any kind. Believes in the natural alphabetical order of everything. Prone to yelling about anything, especially if it's not a problem. The pop quiz is used as a bully club. Belongs in a Siberian grammar school for banished children. The enemy of intelligence, education and

### A WEISER PERSPECTIVE

Matt Weiser

humanity itself.

**THE PARKING METER:** No matter how much you feed and encourage it, it's always waiting until time runs out. When your hour is up it merely waits to process the next customer. Your input is often met with a red face. About as good at stimulating interest as it is at providing information. Repetitive and programmed.

**THE VIBRATOR:** Good-natured and honestly tries to stimulate its audience, but is often the victim of overcompensation and mechanical failure. Resorts to visual stimulation techniques in the absence of really interesting things to do and say. Textbook technique. Never has any new information. Thinks a visual aid is just something to look at. Expend a lot of energy but only causes eventual dissatisfaction and soul-searching.

**THE THROWBACK:** Typically has long hair and/or B.O. May wear Lennon-style spectacles and/or sandals and shorts. Intelligent, but too caught up in the intelligence to make any sense. You're on your own unless you operate at the same level. Valuable for individualism and as a catalyst for enthusiasm. A missing link in Cal Poly's evolution.

**THE PLATONIAN:** Actually has some personal knowledge that hasn't been acquired from a book somewhere. You know the Platonian is intelligent because he or she isn't always trying to convince you of the fact. Enjoys listening as much as talking — communication is possible. Believes students have intelligent thoughts and actually wants to know what they are. Asks as well as answers questions; often answers a question with another question. May be moody and passionate, but this only represents their enthusiasm and proves they don't mind being real people.

A rare breed, indeed.

### LETTERS TO THE EDITOR

#### Schizophrenia misunderstood

Editor — In the May 9 edition, attorney John Hagar described the job of San Luis Obispo County sheriff as "a schizophrenic existence." This term is used loosely and broadly.

For those unfamiliar with schizophrenia, it is a brain disease, a real scientific and biological entity like diabetes, multiple sclerosis and cancer. It exhibits symptoms of a brain disease, including impaired thinking, delusions, hallucinations, and changes in emotions and behavior. Schizophrenia is not uncommon and fortunately, it is treatable.

Schizophrenia is not a split personality, nor is it an idiosyncratic way of thinking correctible through psychoanalysis. ("Surviving Schizophrenia: A Family Manual")

PHYLLIS BRECHAN

#### Corporate distress

Editor — I am distressed. Yes, distressed by the fact that the U.U. Plaza has been transformed into a car showroom and that GM has been allowed to invade Cal Poly. I thought the university was an educational institution and not a commercial showroom. Yes, I realize I can't actually take my checkbook down there and drive off in a shiny new red Corvette. I have been informed that the event is merely a chance to bring the cars to the students' attention because they are all too busy studying to go look at cars downtown.

What is even more distressing is this manifestation of students' priorities. It also reflects poorly on corporations like GM and their attempts to mold our aspirations, goals and dreams. Are we here for an education or merely to pursue the illusion of style?

## State

**Marine sergeant gets murder charge for wife's 'suicide'**

EL TORO MARINE CORPS AIR STATION, Calif. (AP) — A Marine sergeant was charged with murdering his 23-year-old wife, five months after the Riverside County Coroner's Office ruled her death a suicide, officials said.

Sgt. Joseph Thomas, accused of killing Melinda Jean Thomas, has been in custody since April 5, said Sgt. Deborah Bragagnini, an air station spokeswoman.

Naval Investigative Service officials announced the charges Friday.

Coroner's officials determined that Mrs. Thomas died of multiple blunt-force injuries in a Dec. 10 car crash off Ortega Highway, east of the Orange County line. Her body was found behind the wheel of the burned-out car.

Her death was classified a suicide, said Riverside County coroner's spokeswoman Karin Rhodes.

Marine investigators doubted the ruling and reopened the case, Bragagnini said.

**Commission to review ruling that policy violates rights**

LOS ANGELES (AP) — A state commission has been ordered to re-examine its ruling that a policy to protect unborn children from lead violates women's rights.

The Fair Employment and Housing Commission, which meets Thursday in San Diego, had ordered a Fullerton battery manufacturer to stop banning women of child-bearing age who could not prove they were sterile from working on an assembly line with a high level of airborne lead.

Queen Foster, 34, of Orange filed a job discrimination complaint with the state Department of Fair Employment and Housing after being refused a job in 1983 at the Globe Battery Division of Johnson Controls Inc.

She was denied the \$9-an-hour job at a battery assembly machine because of a 1982 policy by Milwaukee-based Johnson.

"Our policy is directed toward protecting unborn children," plant manager Jim Cox said.

## Nation

**Civil liberties groups calling 'zero tolerance' intolerable**

WASHINGTON (AP) — The government calls it "zero tolerance," but industry and civil liberties groups have begun to question whether "overkill" isn't an equally accurate description of the policy under which luxury yachts and other private property is being seized in the battle against drugs.

In the latest episode, the U.S. Coast Guard on Saturday confiscated the yacht *Monkey Business*, the charter vessel that once ferried presidential contender Gary Hart and model Donna Rice to the Bahamas, after officers said they found 1 gram — or one twenty-eighth of an ounce — of marijuana aboard.

Only days earlier, the Coast Guard seized the \$2.5 million yacht, *Ark Royal*, on grounds that one-tenth of an ounce of marijuana was aboard. No one was arrested in either case.

Even rental cars and leased boats and trucks are being seized by U.S. Customs Service agents.

**26 die, many hurt when truck bashes into church group bus**

CARROLLTON, Ky. (AP) — A bus carrying a church group home from an amusement park became a fiery deathtrap when a pickup traveling the wrong way on an interstate crashed into it, killing at least 26 people, authorities said.

It was one of the worst bus accidents in U.S. history, the National Transportation Safety Board said. Between 30 and 40 people were injured in the crash, many suffering from burns.

The bus, carrying 67 teen-agers and adults from the First Assembly of God Church in Radcliff, about 35 miles south of Louisville, was headed south on Interstate 71 when the accident occurred about 10:55 p.m. Saturday. The group was returning from King's Island amusement park north of Cincinnati.

As word of the accident spread, distraught relatives clutching dental and medical records arrived here Sunday to help identify the dead.

## World

**First of four Soviet convoys evacuated from Afghanistan**

KABUL, Afghanistan (AP) — Red Army troops lumbered into Kabul on Sunday after a daylong journey through mountains teeming with guerrillas as the Soviet Union began its retreat from more than eight years of war in Afghanistan.

The 300-vehicle convoy set out at 7:30 a.m. for the 88-mile trip from Jalalabad, passing through crowds of Afghan children who threw flowers and an occasional clod of dirt or dung.

As the motorized rifle unit crossed the towering mountains separating Jalalabad from Kabul, shots rang out from distant hills and the procession backed up in spots along the rough, one-way road.

Troops planned to spend the night in Kabul before heading north Monday.

The convoy was the first of four that will be evacuated from Jalalabad in northeast Afghanistan, near the border with Pakistan.

**Syrian army threatens move into Beirut's southern slums**

BEIRUT, Lebanon (AP) — The Syrian army warned Sunday that it will move into Beirut's devastated southern slums with shoot-to-kill orders and demanded that warring Shiite Moslem militias halt their 10-day-old bloodbath.

More than 7,500 Syrian troops and about 500 tanks and armored vehicles massed around the labyrinthine slums, where 18 Western hostages, including nine Americans, are believed held by factions linked to the Iranian-backed Hezbollah, or Party of God.

The Syrian troops include two battalions of elite Special Forces commandoes, Syrian and Lebanese military sources said.

Brig. Gen. Ghazi Kanaan, Syria's military intelligence commander in Lebanon, told the pro-Syrian Amal militia and Hezbollah to lay down their arms.

Asked when the Syrians would move into the 16-square-mile warren, Kanaan said: "This is our decision."

*McMahon, playmates, other stars, draw crowds to Madden's tournament*

K.M. CANNON/Mustang Daily

By Terry Lightfoot  
Staff Writer

NIPOMO — Autograph seekers, Cal Poly alumni and supporters, golf enthusiasts, and past and present professional football players all converged on the BlackLake Golf Course for the sixth annual John Madden Golf Tournament Friday.

The two-day event benefited the Cal Poly football program.

John Madden, with cigar hanging from his mouth, said, "I wouldn't be doing this if it weren't helping someone, that's the whole point of being out here."

Kendrick Walker, Cal Poly athletic director, said the total for the proceeds won't be known for a few weeks. "But I think we did well," he said. Madden said that between \$50,000 and \$100,000 was raised.

Walter Payton, Howie Long, Rob Lowe and Martin Sheen were among the no-shows. Payton didn't make the event because he was ill, Madden said.

Jim McMahon, who said he was having a bad day on the course, was a big attraction for autograph hounds. Chris, a Paso Robles High School student and member of the PIC, was thrilled to get McMahon's signature. "It was great to talk to him," he said.

The Private Industry Council is a non-profit, federally funded

employment and training center for individuals who have specific barriers to employment.

McMahon said his respect for Madden is why he comes to the tournament. Madden on the other hand, speaking about himself, said he had no business on the golf course.

Kenny King, a former Los Angeles Raiders running back, said, "My golf game sucks! Yesterday I was doing well, today I haven't had a good shot." Despite his bad day, King said he preferred golf to football because there were less bumps.

Jack Tatum, a former Raider cornerback, also known as "The Assassin," said "Hitting a golf ball is a whole lot easier than hitting a receiver coming across the middle. The only problem is you don't know where the ball is going to go — when you hit a receiver he usually goes down."

If burly, husky, hulking athletes didn't suit you, there was always Playboy Playmate Teri Weigel to attract your attention. The Ms. April of 1986 said she enjoyed being at the tournament and that being a playmate was really great.

Everyone involved in the tournament was impressed with how much it has grown in six years. Walker said, "It has really become impressive." Recently retired Raider Tom Flores echoed Walker, saying, "It's turned into a really good tournament."

## Baseball loses last game, playoff hopes at UC Riverside

RIVERSIDE — The Cal Poly baseball team gave new meaning to the phrase "down to the wire" Saturday, as the Mustangs were alive in the playoff race down to their season-ending game against UC Riverside.

The Mustangs needed to sweep the series from Riverside for not only a second-place finish in the CCAA, but also for a regional playoff berth. The team took the first two games, 14-3 and 8-5, from the Highlanders, despite a makeshift lineup and hot, smoggy weather.

But the team lost its momentum, and was run over in the last game, 10-1.

"We went down with determination. We

just came up short," said Mustang head coach Steve McFarland. "We battled so hard in the first two games, we just ran out of gas."

The Mustangs finish the season with a 28-26 overall record — 16-14 in CCAA.

McFarland said, "We put ourselves in this predicament early in the season when we lost so many games on the road. But at least we battled back pretty well."

The Mustangs started the series with Friday's 14-3 romp, despite missing three starters — Joe Rumsey, Billy Smith, and Gary Renko — who were caught in traffic.

The team scored nine runs in the first two innings, and finished the game with

18 hits.

Mustang Pat Kirby was the game's leading hitter with four — a double and five RBIs. Teammate Edwin Fines had three hits, while Todd Rice, Rich Shepherd, Doug Noce and Drew Herson each hit two.

Cal Poly pitcher Erik Bratlien tied the school record for wins in a season with the victory — his 10th. He gave up seven hits and struck out 12. He fanned 140 batters this season — also a school record.

Despite falling behind 2-1 in the third inning, the Mustangs managed to pull ahead in Saturday's second game for the 8-5 win.

Mustang Lee Hancock was credited with the victory, while teammate Phil Crumback came in and got the last out for the save.

Noce went 3-4 with three RBIs in the game, while Rumsey went 3-5 with 2 RBIs.

And although they jumped out with a 1-0 lead in the first inning of Saturday's second game, it was all the Mustangs could come up with.

Riverside took advantage of Cal Poly's lack of hitting and responded with a strong offensive attack. The final score: 10-1.

See BASEBALL, page 11

## Matano team loses in semifinals; four members named all-American

ROHNERT PARK — The Cal Poly women's tennis team returned from the NCAA Division II tournament with four of its members named all-American.

Taking the top honors for the Mustangs were Wendy Elliott, Amy Lansford, Debbie Matano and Tracy Matano.

The Matano twins went the farthest in the tournament as a doubles team, as they lost in the semifinal round to Allison Kincaid and Missy Kohn of Cal State Northridge, 6-1, 6-2.

### WOMEN'S TENNIS

The Matanos defeated second-seeded Xenia Anastasiadou and Margie Matelian of Cal Poly Pomona, 7-5, 3-6, 6-4, in their

first match of the tournament. They then rolled over Edna Olivarez and Jennifer Choy of Cal State Los Angeles, 6-0, 6-1, in quarterfinal play.

Cal Poly's two other doubles teams lost in the first round. Susan Norman and Vicki Kanter were dominated by Donna Sykes and Vicki Crooks of Abilene Christian, 6-2, 6-2. The team of Michelle Reen and Sandy Stace of Southern Illinois-Edwardsville easily defeated Cal Poly's team of Elliott and Lansford.

Elliott and Debbie Matano both made it to quarterfinal singles action, but were halted there.

The Mustangs finish the season with a 24-4 overall record, including a school-record 21-game winning streak.

The team won the conference title with a 12-0 record.

# Aftermath of Mother Nature

## Experts assess potential quake damage on campus, city

**SLO has more dangerous buildings than any city its size in California**

By Karin Holtz  
Staff Writer

If a strong earthquake hits San Luis Obispo a few of Cal Poly's buildings may be in danger, but the greatest fear lies in the possible aftermath in the downtown area.

Paul Neel, president of the state Board of Architectural Examiners and a Cal Poly architecture professor, said downtown San Luis Obispo is a seismic danger zone because many of its buildings were constructed before 1933 with unreinforced masonry. This type of construction, which is just one brick piled upon

another, was declared unsafe in 1933 in a state structural code revision under the Field Act.

"San Luis Obispo has more unreinforced masonry buildings for its size than any other city in California ... (making it) one of the most at-risk communities in the state," he said.

Five of Cal Poly's buildings were also constructed of unreinforced masonry, putting them at great risk during an earthquake, said Doug Gerard, executive dean of Facilities Administration. All of these — Crandall Gym, the old Power Plant and Jespersen, Heron and Chase Halls — were built before 1933.

In response to the statewide concern about earthquakes, the Seismic Safety Commission has been mandated to carry out an earthquake preparedness program under the Earthquake Hazard Reduction Act.

Neel said a major focus of this program is unreinforced buildings, such as those in San Luis Obispo. The act requires all local governments to identify all such buildings in their area by Jan. 1, 1990. Governments are also required to submit a plan as to what they can do about mitigating the problem, Neel said.

Gerard said there has also been concern expressed about the older buildings at Cal Poly, but high cost has been a deterrent to taking the steps to make them safe.

A Seismic Hazard Survey of California Buildings completed by the Seismic Safety Commission in April 1981 analyzed approximately 1,300 California buildings with a focus on state colleges and universities. The study found the cost-benefit ratio of the most at-risk buildings if they were brought up to par with current building standards for safety. Heron Hall and Jespersen Hall, which are used by the Placement Center and the Counseling and Testing Center, were 35th and 36th respectively on the list of the least cost-effective buildings.

Gerard said Cal Poly requested the funds to upgrade these two buildings, but the plan was unfeasible because "it would cost as much, if not more, to rehabilitate them than it would be to build new buildings to take care of those functions."

In response to this decision, a new facility is now being designed for the Testing and Counseling Center, Gerard said. The money should be available for it in January 1989 and it will be under construction by March or April.

Besides the five unreinforced buildings, there are other possible dangers if an earthquake hits Cal Poly.

Neel said the Math and Home Economics Building may also be at risk. "That type of building built during that time (around 1957) suffered major damages in the recent earthquake at California State University, Los Angeles," he said.

Gerard said his greatest fear during an earthquake would be that the underground steam lines

announcements would be made over the public address system to inform students, faculty and staff where the problems are and how to protect themselves, Gerard said.

His basic advice is simple. "I think the training that you receive in your grade-school experience applies equally well here," he said. "If you get caught in a situation where the earth starts to shake and the building starts to squeak and groan, dive for cover. Don't run."

**'We may see some major structural damage, but ... I would almost be willing to bet anything an earthquake of almost any magnitude that can be predicted to hit here would not cause any of our buildings to fall.'**

— Doug Gerard

## Quake project team using temblor record of Parkfield for warning system

Courtesy  
the Governor's Office  
of Emergency Services

By Kathy Campbell  
Staff Writer

Approaching tornadoes usually allow enough time for people to head for their cellars; a hurricane generally arrives not only with a name of its own but enough warning for people to board up windows and batten down the hatches.

But earthquakes are not so considerate. Without warning, chandeliers shake, furniture rearranges itself and chimneys crumble. The shaking stops, and often only then do people turn to each other, wide-eyed, and in hushed voices ask the obvious: Was that an earthquake?

The Parkfield Earthquake Prediction project may help change all that.

Parkfield is a small community in southern Monterey County, far from almost everything except the San Andreas fault. Earthquakes have occurred near Parkfield about every 22 years since 1857; the last one was in 1966. Based on this regular recurrence rate, scientists expect another quake between now and 1993.

The researchers are taking advantage of the historical predictability of the Parkfield temblors by monitoring the earth movement in the area with an array of state-of-the-art seismic equipment. Their intention is to issue a warning to area residents when the instruments indicate an earthquake is likely to occur.

Parkfield is practically a test-tube experiment, said Mike Guerin, coordinator with the Governor's Office of Emergency Services. Since an earthquake is likely, the measuring devices now in place will not only provide valuable information, but will allow some warning time as well, he said.

The Office of Emergency Services last week mailed about 130,000 brochures to households in the seven counties surrounding Parkfield, including San Luis Obispo county, Guerin said. The brochures unfold into a poster-size explanation of

Figures 130 years of regular earth-shaking can't be wrong

the Parkfield prediction and include suggestions on how to prepare for an earthquake. The mailer also emphasizes that a warning means an earthquake may occur, not that it is certain.

Guerin compared the warning to a weatherman's prediction of rain. "You'd probably throw an umbrella in the car," he said. Area residents should follow the same kind of easy preparation steps suggested in the brochure, he said.

"There's a 60 percent chance we'll be wrong," Guerin admitted, but the regular intervals of previous Parkfield quakes offer a better chance of accurate prediction than has ever been available before.

Cal Poly physics professor David Chipping agrees. "That there is going to be an earthquake is almost inevitable," he said, but he pointed out that the brochure includes lots of information on what to do in case of a canceled alert. Too many false alarms could keep people from responding to the one warning which turns out to be accurate, he said.

Although the Parkfield experiment will provide excellent data, Chipping said it may not be useful elsewhere.

"The trouble is, even when this is over, it's going to be fairly useless, because what they're going to have is enough information to predict the next earthquake at Parkfield," he said.

Nevertheless, according to the brochure, the Parkfield project is considered the premier earthquake prediction experiment in the world.

The Parkfield quake is expected to have a magnitude of about 6 on the Richter scale. The quake's intensity diminishes as the shock travels away from its point of origin, so San Luis Obispo residents could expect to be awakened by it, but damage would probably be minimal. Chipping said a quake with potential for greater damage locally would probably originate further south on the San Andreas fault.

## Ancient prophecy called 'blithering nonsense'

By Karen Holtz  
Staff Writer

Obviously, the big earthquake that was supposed to total Los Angeles last week according to astrologer Nostradamus never took place. So what happened?

"I question the accuracy of the prediction and interpretation," said Ned Beach, philosophy and religious studies professor.

The wording of the prophecy is "a blithering nonsense," said astronomy professor John Mottmann. Nostradamus predicted that "the new city will be destroyed by hailstones ... (which is) vague babble you can interpret any way you want," he said.

Beach said Nostradamus was a 16th-century Frenchman who wrote rhymed prophecies in 1555. Written in an oracular style and using symbolic imagery, the prophecies are very

ambiguous and wide open to varying interpretations.

Mottmann said the whole thing was a type of propaganda thought up by people who wanted to sell some books.

"Hailstones wouldn't sell books," Mottmann said. Neither would a catastrophe in some small town, so they decided to make Los Angeles the site. People would laugh at hailstones in Los Angeles so they made it an earthquake. That is something that could get people to start believing, he said.

Mottmann said he doesn't know if the month of May was indicated in the original prediction, but that astrologers decided the earthquake would be at the beginning of the month because that's when Mars and Saturn are aligned.

"If anyone could predict the future, we'd all know about it," Mottmann said. "It's all a nice cosmic joke."

# First Poly Cultural Festival draws few, yet meets goal

By Kelley Cummins  
Staff Writer

Despite a low turnout, the first Cal Poly Cultural Festival held Saturday featured club exhibits, music and fun.

"Our goal was to focus on cultural awareness," said Steve Harmon, a festival coordinator. "There's many cultures and clubs on this campus that are not well known or understood. The festival was to see what the clubs are all about."

Eight clubs were represented, with the Multi-Cultural Center and the Students for Social Responsibility co-sponsoring the festival.

The festival provided an op-

portunity to become aware of the heritage of many students on campus and was also designed to have a direct impact on the students and community members who joined in.

"Being aware could directly benefit them (the public)," Harmon said. "They'd break out of their ethnocentrism, which is seeing the world through one culture as if it's the most important and all other cultures are under them. People don't see, and there's so much more."

Members of the Society for Black Engineers and Scientists, one of the clubs represented in the festival, gave away corn dogs and sold La Fiesta Raffle Tickets. Half the proceeds for the

sales went to a charitable organization called Grass Roots.

"We wanted to show our support for the event," said Erskine Frison, a member of the Society for Black Engineers and Scientists. "We also wanted to show the community that we're a viable organization. There's a lot of minorities buried on campus, and we want to be visible."

Afro American Student Union member Kirk Erskine voiced a problem that is shared by most ethnic clubs on campus.

"In the past we have tried to get publicity to let the campus know we're a club," he said. "This (festival) helps gain recognition."

Festival activities represented

the cultural mix of the clubs.

There were pamphlets on the Multi-Cultural Center and on the Students for Social Responsibility. There were Mexican sweet breads, dips and corn dogs at the various exhibits.

The music represented the ethnicity as well. A Cal Poly three-member acoustics band played and a Central Coast band called the Ya Ya's played slow and easy music.

"Just listen," said Erskine. "On tape we have Reggae, African... all sorts of music to enjoy."

The festival had a low turnout, with a few more than 50, but many club members said the low number of participants was not

important.

"No matter how little the turnout is, we still made some impact," said Adriana Szyszlican, coordinator for the Multi-Cultural Center. "The few people that came got something out of it, and that's what matters."

Frison was also undaunted by the low turnout.

"It was small but worth it," he said. "We had a friendly atmosphere. People were coming up and asking questions, and that's the whole key."

Harmon said he would like to see this non-profit event grow, but "the hardest part is to establish the event, because there's nothing like this on our campus."

## Speaker: To aid developing world, train people to help themselves

By Sharon Sherman  
Staff Writer

As members of an industrial society, college students don't often have to deal with concerns about the basic necessities of life, simple things like a consistent supply of food and water.

But for many people in the developing world, their daily concerns often center on how best to obtain necessities for survival.

Countless organizations throughout the world, working with as many different approaches, are trying to determine how the needs of these people can best be satisfied.

Tom Arens, an area representative in India and Nepal for one such group, told an audience Friday that the most productive method in development is to get down to the grass-roots level and work directly with the indigenous populations.

"I think we ought to be strengthening local organiza-

tions," Arens said. "Sooner or later we're going to have to leave and the people are going to have to take over the responsibilities."

"With the people I work with, the approach is to start with a few people and get them excited. They become the teachers of other people. Then get out and let them do it."

Arens works for World Neighbors, a non-profit organization striving to eliminate hunger, disease and poverty in Asia, Africa and Latin America.

In India and Nepal, Arens said, he looks for local groups with the same priorities as World Neighbors and then provides funding for the projects of those organizations. He said the leadership is what he's most interested in.

"I think more important than the organization is the leader in the organization," Arens said. "I

will look for an individual and then try to build a program around that person."

The programs he works with include family planning, health care, water systems, agriculture and small-scale industry. In rural areas the programs have to be integrated, Arens said.

"It does little to talk about health care if people don't have water to wash with," Arens said. "Or if they don't have water to manage a kitchen garden you can't really talk about nutrition."

When designing development programs, Arens said the strategy used by World Neighbors is to consider the local technologies and provide training to the local people based on the particular needs of their community.

"If you teach a local midwife to wash her hands before delivery, See ARENS, page 10

### ASK LeNan

LeNan Leonardo  
Diet Center Counselor

### Weight Lost vs. Inches Lost

Even though weight loss may slow occasionally, the loss of inches may not. This reduction in inches shows up in the way your clothing fits looser. Knowing that you're continuing to lose inches, even when weight loss has slowed or stopped, will keep you motivated until actual weight loss resumes. Being able to see a reduction in inches can be especially helpful during dieting plateaus.

At Diet Center, we encourage you to monitor your inches-lost on a regular basis. Remember, even though the scale may not show you what you want to see every time, the mirror and the tape measure are the true measures of your success.

## JONES

From page 1  
deputies makes the difference clear.

"A woman may feel comfortable with her job and with her peers, but a rookie may not accept her leadership without a trial," Jones said. "The new guy isn't going to look at her as one of the guys, as someone who knows what she's doing out there. He's the one who's going to make her prove herself — and she's already done it all."

Sometimes, a little judicious restraint is effective. "You get in a situation where he wants to play the leader and you let him fall all over himself. Then you pick up the pieces and take over before he embarrasses himself too badly."

Jones is matter-of-fact about her situation. She talks about it with the same degree of confidence and acceptance she uses to describe a fight to disarm a schizophrenic, knife-wielding teen-ager. It's all part of the job.

"If I went about this job and made waves at every turn and became a thorn in the side of the department, demanding that it be 1,000 percent equal, I probably wouldn't have lasted," she said thoughtfully. "And not because the administration would get rid of me, but because I would have alienated everybody around me."

Jones said the level of acceptance of women in law enforcement has increased over the years. "This department is by no means perfect, but then again I don't know of any that are. I'm in a heck of a lot better position now than a female in law en-

forcement 20 years ago."

Jones recently helped the statewide Peace Officers Standards and Training organization develop a course for women. In June, she will participate in a POST workshop for supervisors on the status of female officers.

In addition to the problems women encounter, they have special needs, Jones said, ranging from the obvious — such as shower facilities — to the more subtle necessities, such as role models.

Jones hasn't won the shower battle (men have the only shower-equipped locker rooms) but she hopes to be a good role model for other women.

"When you get into this field, you need a role model — it's human nature. And women have men as role models, especially in a department like our own where there are so few women."

"It's important for a woman to keep her identity. She's in a male's world, but she doesn't have to swear like the guys and she doesn't have to develop male traits."

At the same time, a woman often isn't allowed to express normal emotions either. Jones said she and her male partner were called out on a case involving the death of a little girl.

"She was beautiful, a little blonde-headed thing. And as she was lying there in the hospital

room, her dad came in and placed a rose in her hands and walked out. My partner left, but I was looking around the room and everybody's got tears coming out. I wanted very much to cry. But dammit, I wasn't going to let myself, because cops don't cry."

When Jones found her partner in the hallway a few minutes later, his eyes were wet. "My feelings and respect for him jumped enormously, but I realized then that as a female, I couldn't show even normal emotions, because that's what people expect."

Being female doesn't exempt a deputy sheriff from tough physical situations either.

"I've had guns pulled on me; I've fought people in bars and had to duke it out. I've been hit and I've done the hitting," Jones said with her characteristic calm and good humor. "But the most rewarding part of my job is the hostage negotiation."

Jones was chosen for the hostage negotiation team about five years ago and completed a specialized training course in San Jose. The team is on call, and although she has never had to deal with a "righteous" hostage situation, Jones said she has plenty of experience talking with people threatening suicide — in effect holding themselves hostage. So far, they've all had happy en-

dings, she said.

Her other specialty is the mounted search and rescue team. As the sergeant in charge of the group, she is responsible for running training exercises and directing searches when the group is called out. Officers provide their own horses, trailers and gear; Jones recently acquired a 5-year-old gelding she'll train to replace the mare she's been riding.

Horses are an interest she shares with fiancé Doug Young; they plan to start team roping and penning when the gelding is trained. Jones and Young share another common interest, too. He is a former deputy sheriff from Mendocino County.

"A law-enforcement career is hard on relationships," Jones said. "It's real strange for people to understand there are folks out there who want to kill you just because of the uniform you wear. You tend to gravitate toward people who can understand what you face every day."

Her quiet confidence in her own abilities to handle it all carries a quick smile and a ready laugh.

"I really do love this department, and overall, I feel very welcome as a female here," Jones said. The secret, the sergeant said, is knowing when to fight and when to let the little things slide.

## ARENS

From page 9

you can reduce infant mortality and you can reduce the risk to the mother," Arens said. "You don't have to teach her germ theory or have a sophisticated training program. By teaching her simple tasks you can improve what she's already doing."

Arens said the basic problems, such as the lack of a year-round supply of water, must be dealt with before bringing in other development programs.

But throughout Third World countries there are water systems, typically hand pumps, that have broken down after a

few years of use and are now sitting idle, Arens said.

"It's because somebody from the outside has come in and done something for people rather than with people," Arens said.

When Arens is involved in the development of a water system, he sits down with members of the community to determine the most efficient method based on their needs.

"Our objectives are realistic," Arens said. "So we don't do things people don't want."

Although he will make sure a little technical assistance and materials the people don't have access to, such as pipes and cement, are provided, Arens said the village is expected to provide the labor and some support money.

"We expect every single house to donate money," Arens said. "Not to us, but to be put in a bank account so later on when the system breaks down they have a little money to buy a part."

"The amount of money isn't important, but every house should contribute."

In an interview Friday, Arens said World Neighbors expects maximum participation from the local people.

"We really believe in strengthening local groups," Arens said. "Our programs are small but you can't overlook the demonstrative potential."

"The process takes time," he said. "But I tend to be patient because I can look back 15 years and see how people were 15 years ago and see that that patience has led to leadership development now."

# Poly student wins first in research contest

By Christine Kohn  
Staff Writer

Broccoli enthusiasts should not necessarily celebrate.

Research by a crop science senior, who won first place at the California State University Student Research Competition two weekends ago, finds that commercial seed companies can produce more broccoli seed. However, this will not necessarily

benefit the consumer, said contest winner Erik Wilkins.

"The use of sodium chloride solutions to develop broccoli hybrids will mean less labor for commercial seed companies," said Wilkins. "But this won't mean a lower cost for the consumer."

Competing against 19 graduate and three undergraduate students, Wilkins presented his research to juries of five profes-

sional experts selected from corporations, public agencies and foundations.

"It was significant that Erik won in competition with more advanced students," said Robert Lucas, associate vice president for graduate studies, research and faculty development. "It says a lot about the strength of the curriculum at Cal Poly and helps the university gain recognition for its educational

programs."

Wilkins is the first person to ever do research using sodium chloride on broccoli, and is currently getting ready to publish his conclusions in a professional journal, he said.

"When this is published, it will probably be one of the most applied research pieces in the journal," said Wilkins. "Hopefully the research will be used by the

See RESEARCH, page 12

## BASEBALL

From page 5

Losing pitcher Greg Paxton was relieved with a 4-1 score in the third. Keith Chura pitched for two more and was marked with six runs. Brad Hoyer finished for Cal Poly.

Rumsey was the top hitter for the Mustangs with two. Sheperd knocked in Cal Poly's lone run.

McFarland said the team is in good shape for next season, as it's only losing three starters. The team redshirted six players this season.

## SUMMER

From page 1

score of 1,000 or higher, he said they may not qualify for entrance to Cal Poly. In those situations, Snyder advises the student to do something else positive, instead of getting rejected again.

One big factor affecting a student's admittance is the program they are applying for.

"In some cases the selection standards are probably lower," Snyder explained, saying that certain majors are easier to get into than others. "In some of those programs the demand is not that great in the summer."

However, he added, "some of the pools are so deep that ... whatever happens, you're not gonna get in." Using the example of aeronautical engineering, Snyder said there are people ranked 150th who are at the same standard as those ranked 50th. "In some majors, it's always going to be tough to get in," he said.

From the university's standpoint, students admitted for summer quarter benefit the

school in regard to the overall budget, Snyder said. They serve as "levelers," he explained, saying that they help keep the enrollment up to its maximum during the regular quarters. The Admissions Office tries to figure out how many continuing students are registered and then predict how many it should admit for the summer.

"The budget is based on an annual average of students who are enrolled," Snyder said. The closer the Admissions Office can come to the average of 15,200 students over the course of the regular quarters, the better. If the summer quarter is low, Snyder explained, that tends to reduce the annual total for full-time equivalent students, which is the basis on which the budget is driven. However, he added that generally it takes a signifi-

cant under-enrollment during the summer to affect the financial situation.

Considering the other extreme, Snyder said it would also be unusual for the summer enrollment to result in too many students returning for fall quarter. "Chances are slim as long as we don't increase the number of students we admit," he said.

The Admissions Office shoots for 5,000 students during the summer quarter, including 500-600 new students. Last year was a particularly good year, Snyder said, because there were 5,500 students.

The figures for last year were slightly up, due to a summer arts program which involved 400 new students, Snyder said. He explained that those students came to Cal Poly as part of the summer visitor's program and that

they are the best people to enroll because "those students go away at the end of the quarter."

Having the filing period for summer in February makes it difficult for the Admissions Office to process the applications, Snyder said. All the schools in the system have been put on a common filing schedule. In some cases, they have to admit some students on the condition that they will look at their transcripts later, Snyder added.

"It gives us fits because we don't have time to totally complete the application process before the term," he said.

## MERGER

From page 1

"I can see an advantage because one administrative person would be overseeing the general education and breadth requirements," said Ratcliffe. However, Culver said he was unsure as to how the suggested administration would work. "A great structure won't work with the wrong dean," he said.

The committees should make their report this week to Wilson, who was unavailable for comment.

## WHY PAY HIGH RENT?

major vegetable seed companies in future years."

After six attempts at a project in three years, he started to prepare for the research in November 1987. The actual experiment took place from December 1987 to January 1988.

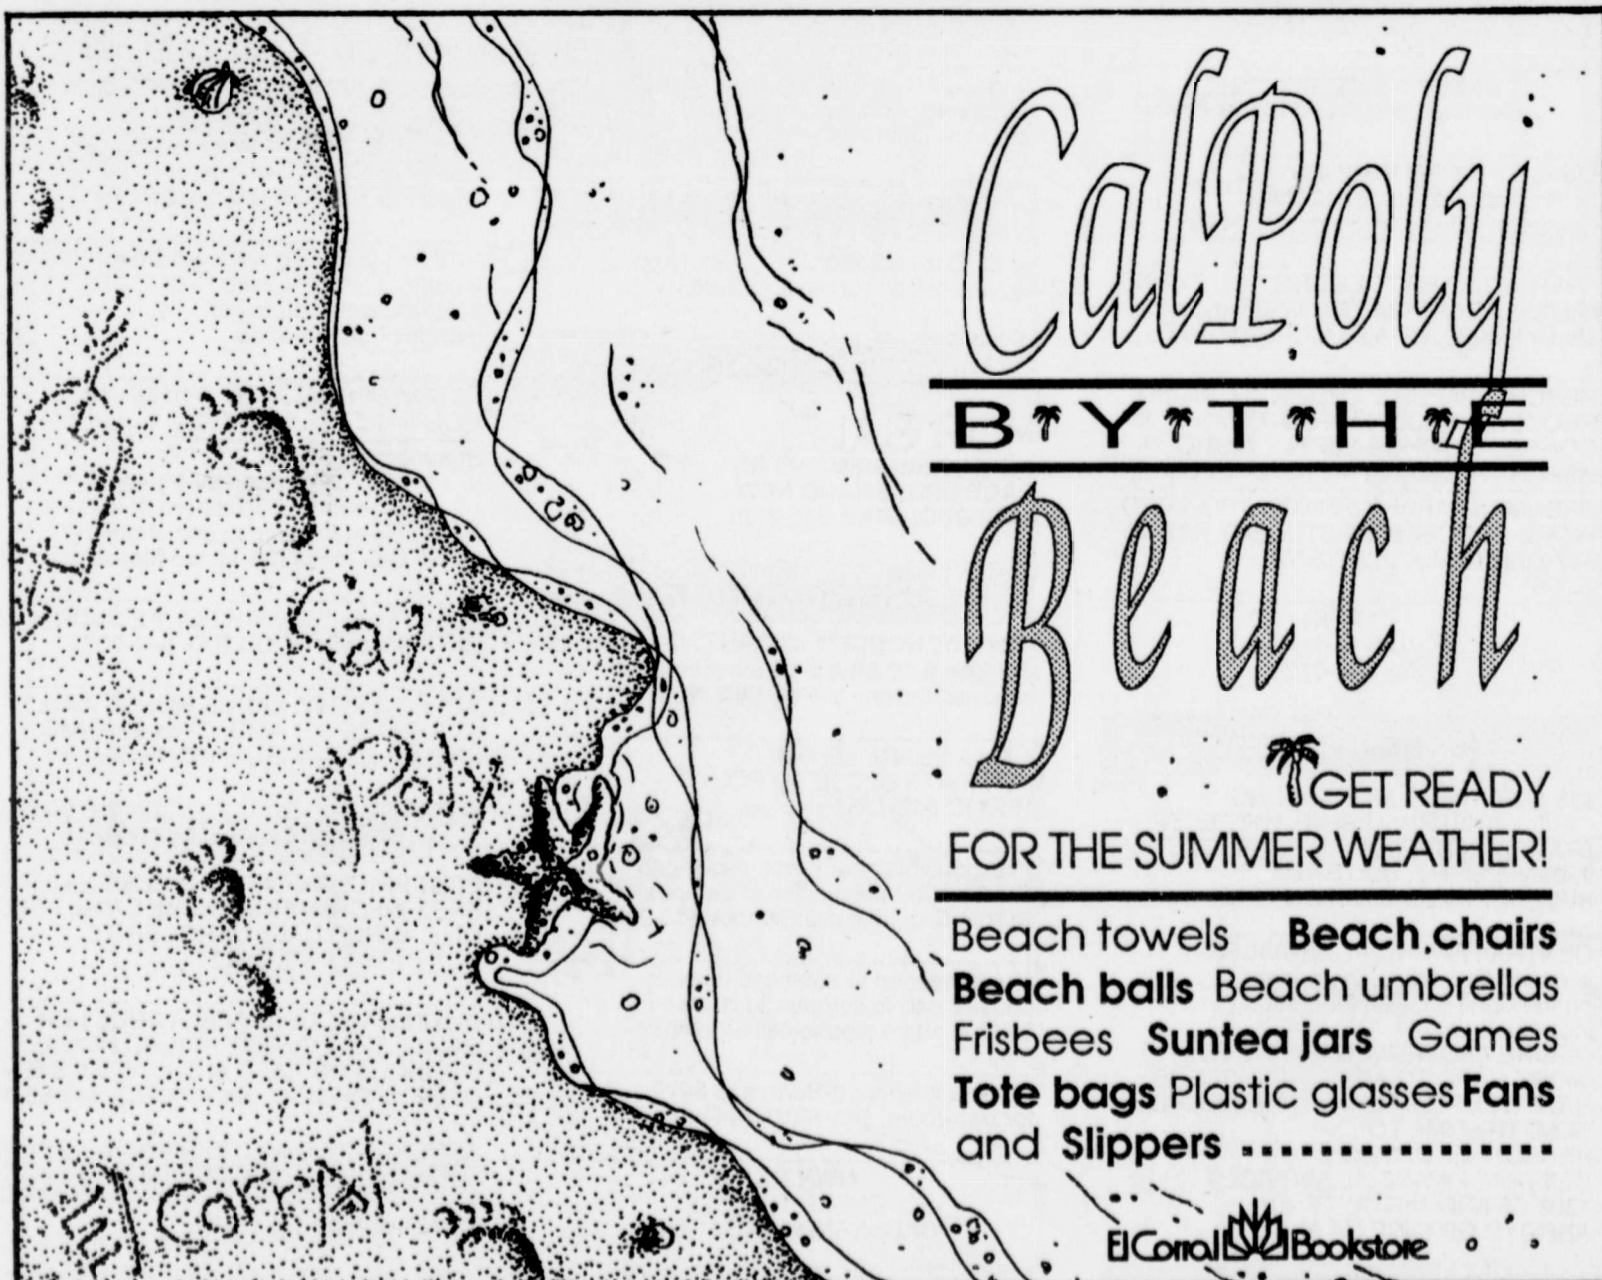

In comparison to other research projects presented in his category, Wilkins said his presentation was relatively uncomplicated.

"I think the key to my winning was not necessarily in the complexity of my research, but in my ability to present that research so that the audience could understand it," he said.

Wilkins was one of 10 Cal Poly students chosen to compete at San Jose State in the second annual competition.

Screening to determine the representatives took place March 5 after the Academic Senate reviewed nominations from the seven schools on campus.

"Each school nominated up to four graduate or undergraduate students for the competition," said Lucas. "Twenty-two students competed and 10 were chosen to go to San Jose."
