Poly prepares high schools for diplomas too

BY AREN ENDES

A program sponsored by the Poly Foundation is giving high school dropouts a second chance.

The High School Equivalency Program is operated by the non-profit Cal Poly Foundation in contract with the U.S. Department of Labor.

The program is run along the lines of the Comprehensive Education Training Act. It is a Title III B program—serving only those who have left school, or are from a locale where at least 50 percent poverty income is from farm workers, or are handicapped.

The HEP complex is located at 3420 Sycamore, and returned it to the Chancellor, who circulated the revised report to the campuses about a month ago.

The task force committee is deliberating over what general education means to a polytechnic campus, said Chairman Stine.

The committee is defining the "specialness" at Cal Poly and what type of general education is appropriate to this campus, said Jones.

The biggest problem now is the lack of direction and coherence in the general education program.

The student is awarded a high school diploma.

Fernando Garzo, an 18-year-old from Strathmore, started in the HEP last week and said he is facing the biggest decision of his life—his future or the Marines.

"I was going to be taken out of school when I turned 18 to help my family because my father is sick with cancer," said Garzo. "I want to get my diploma as soon as I can so that I can get into a job training program and learn how to weld."

"My family is already in debt with hospital bills," he said, "and if I was not here now I would be with my family picking oranges."

Garzo is still not certain that he is in the program to stay. The selection program is probationary for each new student. At the end of the first three weeks, the student is interviewed on video tape and must submit a resume. The student is also graded by evaluations from his instructors, his dorm behavior and clean-up behavior. The combination of these five evaluations determines if the student can stay.

The HEP environment is a strict one. Classes run each school day from 8 a.m. to 3 a.m. The students are given a $10 a week stipend but deductions are made each time the student is absent or tardy—or when the student does not hand in homework or does not participate.

The program is strict because it must comply with a strict set of rules and regulations in order to get federal funding.

See Diplomas, page 4

Some majors may avoid GE increase

BY KAREN GRAVES

General education may be subject to an increase in units, but certain majors such as architecture and engineering may be exempt from such an increase, said Bill Stine, chairman of the Academic Senate General Education Breadth Committee.

This is one of the recommendations in the revised version of the report made by the Chancellor's Task Force on General Education.

But Stine does not think this recommendation will remain in the report.

The report and the recommendations accompanying it may be presented to the Board of Trustees at their May meeting, said Hazel Jones, vice-president of academic affairs.

The Chancellor's Task Force on General Education was formed about two years ago, its original report was distributed to the campuses of the California State University and Colleges system during fall quarter and was criticized.

Because of the criticism, the Task Force revised the original report and returned it to the Chancellor, who circulated the revised report to the campuses about a month ago.

The revision adds flexibility to the report and serves to give campuses a feeling of autonomy, said Jones.

"We have the right to make some choices on what we want," said Jones.

The overall goals of the Task Force report remain the same as before, to improve general education, said the vice-president.

Majors such as architecture and engineering may need to appeal for changes as far as GE requirements are concerned, said Jones.

This is an improvement for Cal Poly, she said.

To consider the recommendations made by the report, the Academic Senate General Education Breadth committee has become the Cal Poly Task Force on General Education, said Jones.

The purpose of the university task force is "to develop the philosophy behind and a set of goals for a general education program that would be appropriate for a polytechnic campus," said Jones.

General education is now a mattering of coursework, said Jones, and it will take some time for this situation to change.

The study on general education being done by the task force is important because for the first time we will have a philosophy of general education appropriate to this campus, said Jones.

The task force committee is deliberating over what general education means to a polytechnic campus, said Chairman Stine.

The committee is defining the "specialness" at Cal Poly and what type of general education is appropriate for a career-oriented student, he said.

The biggest problem now is the lack of direction and coherence in the general education program, said Stine. A general education program will be seen as support as much as a major course of study is supported, he said.

Revisions made in the report limit the power of the statewide review committee, change the oral and written communication requirement to competence in the English language and allow the state requirement dealing with U.S. History, Constitution, and American ideals to be included as part of the GE requirements, said the professor.

The addition of the American government requirement to the general education unit increase will reduce the impact of the increase by more than five units, said Stine. The original increase proposed during fall quarter was for more than 12 units, he said.

Most universities throughout the nation are now changing their general education programs, said Stine.

It is an appropriate time to look at Cal Poly and what general education means to us."
A need to juggle

We hope in taking up the topic of CAR once again that it will not be tuned out like a song heard too often on the radio. We feel there is a problem with CAR that can be corrected; thus, it is worthwhile to discuss the new registration process.

That problem has to do with rearranging schedules during the process of enrolling for classes. In the old, gymnasium registration, a student in the right way if a desired class was filled already—there were no more cards available for that class. Consequently, the student could check a schedule and look up another class to substitute in place of the filled one. Thus, even those students who registered late in the line-up when classes are closed, could come up with a useful schedule during registration process.

But not any more. CAR has done away with the opportunity to juggle schedules in the middle of registration.

The computer-assisted system offers only one shot at arranging a schedule before the start of the quarter. If a student is in a group whose schedule request forms are processed late, the classes requested on his form may be filled. He won’t know that until the study lists are mailed out or until he picks it up from the department office. This may be as late as the start of classes during the first week.

Sure, students can rearrange their schedules by adding and dropping classes after the start of the quarter. But his first quarter with CAR has shown as fallacious the idea that in-registration schedule juggling can be replaced by use of the add-drop process. Too many students jam the classrooms of the desired classes on the first days of school. It may take two class meetings before anyone knows who is to be added to the roll and who is out. This means too much time is lost before students find a place in a suitable second-choice class.

There is a solution to this. Not a harebrained editorial staff concoction, this: it has been used at San Jose State University for some time and apparently with good results.

San Jose uses a computer system with the walk-through registration added on. Registration begins with the computer just as with CAR; forms are filled out, processed, schedules are printed and class lists are generated. Second choices also may be listed.

These classes not filled in during computer registration are put on the market, so to speak, for students who did not get the classes they chose first. The university holds a walk-through registration with students going through the same order in which they were processed through the computer.

Maintaining this order of enrolling gives early groups the advantage they lose with CAR—that is, they have a good chance when classes are filled to come up with alternate schedules.

The effect of this additional, walk-through registration is to reduce the number of students clamoring to add classes, and to assure even distribution of enrollment. Even those classes which may have been unfavorably scheduled may be filled as student’s second choice.

In initiating the San Jose system at Cal Poly, administrators may learn from the experiences of San Jose personnel. This would ease the trauma inevitably associated with initiating a new system.

We adjure the administration of this university to initiate a system such as is already in use at San Jose State University. This system is needed, and with the experience of San Jose State to draw on, there will not be a great initial effort needed to implement the method here.

CAL? WAKE UP!

I WANT TO COMPLAIN ABOUT THIS RIDICULOUS REVIEW ON THE KENNY LOGGINS CONCERT!

We hope that the Campus Planning Committee pick on moped drivers. Before moped riders probably drove cars or bicycles onto campus. We have just traded one form of transportation that is dangerous to pedestrians for another form.

The real problem is how poorly "planned" this campus has been for travel. Everyone is funneled into bottlenecks. University vehicles cross campus at 8 a.m., noon, and 1 p.m. These vehicles park behind the Union during lunch making one lane of traffic for the other university owned vehicles and no room for pedestrians, bikes or mopeds. Pedestrians stand and talk at the bottlenecks and bikers and moped drivers circle around them.

One day last spring I saw a faculty member step off a curb in front of a biker, causing the biker to brake and be rearranged by another bike, while a University truck going the other direction rears around a barricade bar. The cause of this pandemic was the first coed of spring in short skirt, now who was really at fault in a multiple accident?

This campus should have its streetsome for bikes, mopeds or motorcycles that has no pedestrian sidewalks for pedestrians or bikes: have to walk in the streets and bikers on using university vehicle lot and coffee breaks. Mopeds should be allowed to be walked or cycled located bike racks. Should provide place a ban and short antenna in to would cause terminal depressions several faculty members know.

Each source of transportation adds little to traffic congestion. A major problem is lack of planning in the Campus Planning Committee. Some mopeds do drive too fast among parking many bikers ride without lights at night and without hands, usually, on the campus. Employees create some looking more for legs than presence. However, there is the lack of a type. A series of traffic of all sorts that the Permit Committee should be worried about it only mopeds.

Week of Child student project

For Cal Poly child education students are doing a "Week Of The Kid" celebration for the week of April 8-12. The celebration will highlight a variety of papers and activities to one week of reading and problems of children. Community groups interested in helping parents and students are expected to participate in the various activities.

The four students making the program as part of their senior project are Julia Miller, Donna Stuessy, Nancy Hing and Tina Long. A post discussion titled "Pick a Child Careers for Your Child" is planned to end the activities. It will begin at 6:30 p.m. on Wednesday, April 11 at the Johnson Preschool, 2500 S. Avenue S.

$12,415 incentive check

Energy-saving lamps used

BY JIM WITTY

Cal Poly Staff Writer

University employees recently replaced 49,600 fluorescent tubes with more energy efficient lamps in campus buildings, according to public information officer Don McCaleb.

As a result of the lamp replacement, Pacific Gas and Electric Co. presented the university with a check for $12,415 as a conservation incentive.

In addition to the incentive, the replacement program is expected to immediately save the university 12 percent of its electrical consumption.

Executive Dean Doug Gerard said, "Each new lamp burns five watts less per hour at a cost of five cents per kilowatt hour. In the long run, it adds up."

Noting that many students and university employees don't think about turning off lights when they leave a room, Gerard commented, "One of our biggest problems in education..."

He believes a substantial amount of energy is wasted if people don't participate in conservation.

The lamp replacement program is part of the university's energy conservation plan that began at Cal Poly about two years ago. The programs instituted on campus include the replacement of street and interior lights with high pressure sodium lamps, the use of water flow restrictors in showerheads, throughout the campus.

Diplomatic ties with Iran cut

In an attempt to increase financial assistance to the hostages and their families, and to prepare for claims by U.S. corporations and others against Iran. An estimated $80 billion in Iranian government assets was frozen last fall in one of Carter's initial retaliatory steps.

"Other actions may become necessary if these steps do not produce the prompt release of the hostages," Carter said. He did not say what other steps might be taken, but a naval blockade of Iran is known to have been considered in the United States might try to enlist the help of its European allies in further economic retaliation.

House leaders support boycott

WASHINGTON (AP) - In a bipartisan appeal, the leadership of the House of Representatives called on the United States to participate in a boycott of the Soviet Olympic Games in Moscow.

"We cannot permit the Soviet Union to think it is business as usual with the rest of the world after the invasion. We must not let the Olympics be prostituted by the Soviets," the letter said.

Displaced oil tanker off coast

SAN SIMON (AP) - A 623-foot tanker laden with 3 million gallons of oil was adrift off the Central California coast today after it was disabled by a brief fire, the Coast Guard said.

The Austin, bound from Martinez to San Pedro, was drifting about 17 miles off Peidras Blancas Point near San Simeon.

Anti-nuke protesters arrested

GREAT FALLS, Mont. (AP) - Twenty-three persons were charged with trespassing after they blocked the gate to Malmstrom Air Force Base in a protest against nuclear weapons, authorities said.

One of those arrested Sunday was the Rev. John Lemnitzer, pastor of the Prince of Peace Lutheran Church in Missoula, Mont. Before the protest Lemnitzer told some 100 persons who gathered in a nearby field for a worship service that "by blocking the gate, we are symbolically blocking the path to nuclear holocaust."

Ed Note: Between the Lines will be a weekly editorial commenting on the sports program at Cal Poly and intercollegiate sports in general.

A guillotine in the form of Proposition 9 stands poised waiting to lay off vital support to Cal Poly and the California State College system in general. Though at this time (March 11) it appears that the proposition will pass by the voters in June and if the loss of funds cannot be offset by private funding, then many sport programs at Cal Poly will be reduced. The administration is currently examining the proposed sports budget, looking to scrape off the excess fat should it be considered as the state must reduce funding to the athletic department for next year. However when wrestling coach Vaughan Hitchcock requested a sabbatical leave, the administration was able to cut out the two necessary coaching positions by hiring Crivello for the fall quarter and Wood for the fall and winter quarters only. Because Hitchcock returned this year from his sabbatical, West said that two coaching positions has to be eliminated for next year.

BY GUILLERMO BROOK

An athlete wishing to transfer must meet certain standards set by the NCAA. A transfer count is one for every full year of competition, which is calculated by subtracting four years from the number of years an athlete has been eligible for competition. Since the NCAA enforces these rules, the California College Athletic Association has always been careful to enforce them. Mike Bailey, guard for the Mustang football team, studies a notebook diligently.

Laid-off
Associate coaching position rather than a head coach. "There are four sports in the men's program and three in the women's that have assistant coaches. In terms of our long-range objectives we thought it best that we cut these positions," West said.
