The full impact on Cal Poly of anticipated reductions from proposition 13 will not be experienced until next year, said James Landreth, director of business affairs. This is due to the 1979 passage of AB 1173 introduced by John Vasconcelos, (D-Santa Clara County) which provides the California State University and Colleges system with $2 million in funding not anticipated in the budget for the 1979-80 academic year. The benefits were realized during fall quarter, said Landreth. This money was given to the CSUC to be distributed ‘to lessen the negative impact of enrollment declines and budget restrictions on the instructional programs and, to the maximum extent feasible, to lessen the negative impact on the upward mobility and affirmative action programs.’

Because of this funding, some departments received more faculty positions than anticipated. Verlan Stahl, foreign language department head, said his department got enough additional funding to allow six part-time teachers to teach full time this quarter.

This funding was distributed in two phases as campuses throughout the system. The purpose of this distribution of funds from the Legislature was to see Prop 13, page 12

CSUC hires more profs

BY KAREN GRAVES Daily Staff Writer

The academic senate, at its Tuesday meeting, approved a resolution that recommends giving teachers more flexibility in scheduling their office hours. The resolution, which now goes to President Baker, asks that teachers be allowed to juggle the five hours a week they are required to spend on office hours.

Previously teachers must schedule an office hour every weekday. The resolution limits a teacher's schedule to two office hours a day; this would make it possible, if the teaching schedule is agreeable, for a teacher to spend only three days a week on campus.

Senate Chairman Max Riedlsperger said President Baker expanded research as a faculty function. This resolution will give us a larger block of time for writing and research, ‘he said.

Nine senators voted against the resolution. Alan Foutz (CPS) said the faculty has a responsibility to be on campus every day.

‘With budget cuts, it’s important to maintain an image outside the campus,” Fouts said.

Greeks days at Poly: Sample pagan gales

BY DEBBIE WAREN Daily Staff Writer

The "D" on the hill behind campus has changed to "ArP," but the change isn't permanent. The letters are the Greek abbreviation for the fraternity Alpha Gamma Rho and were put on the hill in celebration of Greek Week.

Tom Rattigan, a brother of Alpha Epsilon Pi, explained the tradition and why his fraternity's letters were up there.

They were up there last year. I guess it's whoever gets up there first.

The letters are made of white sheets and don't deface the hill, Rattigan said.

Greek Week is celebrated May 4 through May 11 in recognition of all fraternities, their little sisters and sororities.

Rattigan described Greek Week: "It's just a really healthy competition that brings all the Greeks together. There is a lot of interaction. It is all Greeks and only Greeks.

Prior to Greek Week, on May 1, was the Greek Goddess Pageant. Each Greek organization nominated a girl for the competition.

The panel of judges consisted of five members: "a faculty representative, one of the community and campus," Rattigan said. "The girls were judged on personality, poise, and appearance.

Tribi Chauk, a sister of Beta Tau Alpha, was selected as Greek Goddess this year.

Sunday began Greek Week with a barbecue at Santa Rosa Park. The highlight of the afternoon was the fireman's competition which included such events as long distance hose shooting and a bucket brigade.

Rattigan described the event as "a great success. It was really a riot to watch those things. There was a lot of yelling, screaming, and excitement."

Proceeds from the barbecue were donated to the American Heart Association.

"This is relatively new in the Greek system," he said. "We're trying to show the community that Greek Week is not just all fun. There is some seriousness."

Tuesday night the Greeks indulged in water fights with the help of balloons and hoses.

Greek Week topic on 'Open Channel'

Greek Week, pledging, the benefits and disadvantages and purposes of fraternities and sororities will be some of the topics discussed May 8 on KCPR's Open Channel at 6 p.m.

Listeners are encouraged to call 544-4640 to participate in the hour-long show.

"The water fights are unannounced until about two nights before they happen, then the Interfraternity Council President sets the date," Rattigan explained.

"Then all hell breaks loose for two hours until the cops come and settle everything down. It's just a kind of harmless little fun."

Thursday is the Greek Sing and the can drive. Proceeds from both go to the Special Olympics. The Greek Sing will be in Chumash Auditorium at 7:30 p.m. Admission is $2.50 for students, $5 for non-students.

"Each house enters into a singing type of competition," Rattigan explained. "This is also a new phase of Greek Week, but
Opinion

Chalk one up for the good guys—the raid by British commandos of the Iranian embassy in London early this week was a courageous and heroic victory. Thanks to the daring of government officials there, the hostage siege which could have dragged on as long as the seizure of the American embassy in Iran, was ended quickly.

Throughout the world the British are being congratulated for the move, which ended the holding of Iranian hostages by their own militant countrymen, in six days. Many feel it is time countries whose own lands and property are being used as political playgrounds for foreign battles should protect themselves by flexing their military muscle. That was the choice Prime Minister Margaret Thatcher made when the militants began trying with the hostages by planning to murder them and throw them out on the London streets one by one until their demands were met. Thatcher wasted no time in organizing her forces and putting a stop to the insolent outburst.

There is a lesson to be learned from the tragedy in London: When undiplomatic foreign countries choose to invade other lands and bring killing and destruction with them, it is time to use force to stop them. As seen with our own troubles in Iran, it is obvious negotiations and diplomacy seem to bring nothing but prolonged agony. Such talks put us on the defensive and give terrorists the leverage to call the shots.

Although military action does not always bring the optimal outcome to such acts of terrorism, it seems the only way to handle this new breed of terrorists who stop at nothing to fulfill their demands.

That this new development on the Iranian front effect our own hostage problem in Iran? It seems we too have tried everything, including military action, to rescue the Americans—but to no avail.

The experience in London has shown us that innocent countries caught up in foreign problems have the power to stop them—it's time that those preyed upon use that power.

Mental Vagrancy

2nd LAW OF THERMO, YA KNOW.

THE MEASURE OF DISORDER IN THE UNIVERSE IS ALWAYS INCREASING.

Ethnic protest

To The Editor:

This is in reference to the article published in Mustang Daily April 23, 1980 concerning the protest by the ethnic students on campus. Whomever the editor was who vociferously and ruthlessly defended the interview with me, and subtly attempted to cover up the real intent of the protest should be removed.

The real intent of the protest, not fully, was to draw the attention of the students and community of San Luis Obispo from one of neglect, threat, or inclusive of race consciousness. The main point was to change attitudes, so that when students here in the ethnic student members are in a position of child railing, they no not perform their duty with the same racist attitudes that their parents raised them with, however blatant, subtle or non-binding they may appear to be.

While America has through history tried to subjugate and not recognize anything other than what they did. This institution, the college teaches us that history, math, engineering, and architecture, just to name a few, began somewhere in Greece or in Europe. In fact, if you had been taught the truth, you would know that some of those fields originated in those places: rather, they too were, and still are, attributes these great contributions learned those fields of study in guess where?

So now we clearly see. Since the white race has been here from that point, it is easy to see why most white people today, as a result of that steal, live in a paradoxical paranoia about people of color, especially black people. It is only when the white race’s consciousness and awareness is raised to a level of acceptance of reality, and denial of guilt, will the white race truly be able to accept themselves and those around them.

In closing, black people on this campus will never again revert to a pacifist stance. There will be many more protests and demonstrations to accomplish what we set out to do, to make people aware of what is happening.

Implications

Editors

This is a commentary on Ahmed’s editorial, “Casualties: Carter Too?”, which appeared in the article, however, it is emphasized, if not totally misinterpreted, the implication to which Carter.

Politically, Mr. Carter is countable for the unsuccessful Iran release of the 51 hostages, and unfortunately, American Americans, we have a strong basis to find faults in their policy. This is what appears to be the basis for drafting his editorials. However, for a variety of (“paraphrasing Monday’s “Real Outlook” in the Wall Street Journal), the American public has backed Carter’s decision. Statistically, 70 percent American public would support military rescue attempts.

Concerning political implications, Carter was ever so careful leadership stance initiated a what-in-the-world America public responded positively. Though I acknowledge the stance is an aspect of American politics. I personally respect a little fault with his decision, but as a person, I am achieving the responsibility of decisions. By all future, President Carter would show the world.

Toni
We are all hostages

It is reasonable to say that the current trend of our direction is pointless, unless we are ready for an unexpected grave.

We have been labeled “a disposable society,” and the more I think about it, the more it becomes true. We treat life as a thrown away hamburger and we treat other people’s lives as the hamburger’s wrapper.

We have disposable thoughts and disposable modus operandi. When we have exhausted all possible directions, we have only one course of action; that is, to promote the success of a dream.

Author Loren Schneiderman is a senior journalism major

Not really. Where would he take it, and who would pay? “But there’s got to be something we can do,” he said.

There is, tell people to be more careful when they drive, watch out for the little beast scurrying across the road. It’s spring, you know and they want to get to the other side.

Think of it: a squirrel unable to join his friends in the trees, unable to collect acorns for food or tend for itself. If the internal injuries don’t kill it, some predator probably will.

No county agency cares for hurt wild animals. The Animal Regulation Center will assist dog and cat emergencies, and it removes dead skunks. Also, the Department of Fish and Game removes hurt deer.

ABC Director Robert Dollahite said the agency handled about 20 such calls a week in 1979. About 80 percent of those were road kills.

Author Jay Alling is a senior environment biology major and Mustang Daily Co-Editor.

Professor Aryan Roest said the chances of hurt game surviving depend on how badly the animal is hit. But he said human efforts often don’t help wild game—they die from the stress of being confined. One bird with a broken wing, tended to by the Cal Poly biology department, seemed in good condition one day, but Roest said it was found dead the next morning—probably a victim of stress.

For wild animals, the best medicine is preventative drive carefully. A squirrel unable to climb a tree is like a journalist who can’t type. Remember it’s spring—the beasts want to get to the other side.

Daily policy

The policy of Mustang Daily regarding letters and submitted material such as letters and press releases outside of the newspaper staff is as follows.

Mustang Daily encourages ready comments on new stories, opinion pieces, and editorials.

Letters should be submitted to the Mustang Daily office in Graphic Arts Building 226, 9 a.m. to 5 p.m., weekdays by mail to Editor, Mustang Daily, GRC 226, Cal Poly, San Luis Obispo, CA 93407. All letters should include the writer’s signature and social security number.

Editors reserve the right to limit, edit, or delete letters. Letters should be kept as brief as possible. Inordinately long letters will not be printed.

Press releases should be submitted as early as possible to the news editor in the Mustang Daily office or by mail. All releases should include a phone number and name where further information may be obtained.

Editors reserve the right to limit, condense, rewrite and edit press releases and make judgments based on their news value.

Correction

It was erroneously reported in the Wednesday, April 30 article “Generic medicines best buy,” that Safeway aspirin is a generic drug. It is a brand name drug.

In the same article, generic drugs should have been referred to as generic equivalents. Also, there is no generic equivalent for antihistamines, but the buyer may read the label for ingredients and choose the best buy of brands for that drug.

In the story “Huff, bumping heads with spathy, runs alone,” it was wrongly reported the candidate would apply for law school this fall. Huff said he will apply in fall, 1981.

Frawls

The reason I called you in my office, Mr. Frawls, was because of this term paper you wrote...

I want you to go back and rewrite this paper with a little more thought this time...

I want you to go back and rewrite this paper with a little more thought this time...

By Mark Lawler
The Great American Consultant

BY CHERYLE JOHNSON

Amid the mingled aroma of fresh coffee and doughnuts, nearly 80 people recently fanned into an Engineering East classroom designed to hold half that number to hear about the future of nuclear fusion.

Cal Poly President Warren Baker leaned in the doorway — with several others while Dr. Adrian Chip Smith, Jr., a consultant in fusion research at the Lawrence Livermore Laboratory, explained current technology and future trends in the U.S. fusion program in his April 24 lecture.

Sponsored by the Electric Power Institute, a privately funded unit of the university which acts as a link between Cal Poly and the power industry, Smith spent most of his lecture time explaining the highly technical functions of the various fusion reactors shown in diagrams during a slide sequence.

Smith, who is also a member of PG & E's nuclear engineering department, explained the similarities and differences between the Tokamak Fusion System, which is based on confining the reactor's fuel with magnets, and other systems which use mirrors.

Although each of the reactors shown differed in size, shape and concept, all had one major aspect in common: they were designed to produce energy by "fusing" atomic particles, or nuclei, from the lightest atomic elements.

Fusion reactions are much more difficult to obtain than fission reactions, said Smith. One major difficulty in obtaining the fusion reaction is in bringing the nuclei of the atoms close enough together so that they will combine.

The other major problem is that because the particles have the same positive charges, they have no magnetic attraction. Like magnets with the same charges, they repel one another.

Fusion reactions pose other difficulties as well, said Smith, who obtained his doctorate in electrical engineering from Cornell University in 1976. The biobased potential of slightly radioactive fuels such as tritium, cannot be overlooked, Smith added.

Tritium, which does not occur naturally in the fusion reactor, has a half life of 12 years. Smith, Piutoniun, a common fuel used in fission reactors such as those at Santa Barbara Canyon, takes more than 20 million years to lose half of its radioactivity.

Another problem occurs when the walls of the vacuum chamber closest to the fuel come in contact with, said Smith. That wall would have to be replaced yearly because of damage.

Problems centering on nuclear proliferation issues, environmental factors, and the fuel must also be examined, Smith stated.

"I think we have to be very cautious of our (fuel's) limitations," he said.

But deuterium, or heavy hydrogen, is a fuel which can be extracted from inexpensive and available sea water and does not suffer virtually limitless possibilities for fusion fuel, said Smith.

Dr. Adrian Smith, Jr. of Lawrence Livermore Laboratories explains technical problems which must be solved to make fusion a practical power source. Smith spoke at Cal Poly April 24.

Once-common diseases dying out

ATLANTA (AP) — Scientific advances have made the once-common diseases of tetanus, whooping cough and diphtheria so rare that many physicians will never have to treat them, according to a leading public health official.

Successful campaigns, also have been conducted against polio and smallpox.

And now scientists are setting their sights on the elimination of what was once an expected illness for most children — the measles.

This is really a testimonial to what is happening in our own time. Dr. Harry H. Foege, director of the national Center for Disease Control, said in an interview.

"Measles is one in which we can safely say that we will never see again. Polio is a disease, since half of the doctors will never see it again. Tetanus, there are less than 500 cases a year," Foege said. "Diphtheria? We've had one case this year.

"Periussis whooping cough. That is occurring less than 100 times a month. A physician has less than one chance in 200 of seeing a case of whooping cough in a given year.

"Among the physicians in this country who recall the polio epidemic of 1950s, Dr. Julius B. Richholtz, now the U.S. surgeon general, "Polio occupied 50 percent of my time during my private practice in the 1950s. It made the closing of swimming pools and theaters an annual expectation," Richholtz said in a telephone interview from Washington.

"This year, we will mark the 25th anniversary of the discovery of the Salk vaccine by Dr. Jonas Salk," Richholtz, a member of the 1950s' "Miracle Mile" with Albert Sabin, he said.

"As a result of their work, a polio vaccine has been produced and has largely eliminated poliomyelitis from the U.S. since the mid-1960s."

"We can't lose sight of the need to continue immunization."

The vaccine was last year made the once-common diseases found in a poll of physicians in 1950.

Cranston beats Hayakawa in primary

SAN FRANCISCO (AP) — Democrat Alan Cranston is doing a much better job representing California than Republican S.I. Hayakawa, according to the latest California Poll.

In a survey of a cross-section of 1,912 adult Californians, 31 percent rated Cranston as doing a good or excellent job, compared with 21 percent for Hayakawa.

Sixteen percent said Cranston was doing a poor job, compared with 40 percent for Hayakawa.

Hayakawa has improved in popularity from a 40 percent good or excellent rating two months after he lost in the primary in 1977.

ENough deu res, he said, to contact the need for a bill of rights

Lack of involvement, the part of south, however, could prove greatest obstacle to a continued development, state officials.

"We can't lose sight of the fact that, just because it is a local supply, that it is automatically accepted individually, it is going to be distributed to state the far as he knew, this study of a future utility development will become directly involved with the program.

Smith is currently working with PG & E on an analysis of what are called "small sized" reversed-mirror type reactors to see whether such devices can be developed using utility grade.

According to Smith, the future of controlled fusion research has been commercially meaningful for the last several years.

Because of a current conservative involvement, Smith said in a personal interview. Fission will be committed to the current U.S. efforts in the next hundred years.

If America wants big power sooner, it will have to develop a technology through small-scale facilities, Smith stated.

"We all face an energy crisis of the 21st century," he said.

"Fifty years is too long to wait.

Another possible answer is the fusion reactor, he said.

"The fusion reactor is the only way we can make use of the hydrogen which is plentiful in the world."

Smith is a member of PG & E's nuclear engineering department.

the injured mammals than nothing at all.

I do think the pools are adequate. Sure, they could be bigger, but they've done quite a lot with what they have.

Mrs. Tyler is sure the pools won't stand for the closing of The Aquarium. And she feels the government really has little choice in letting them stay open.

"We are the rehabilitation place that the seals can be brought to," she said. "And thousands of people come just to see the animals."

Mrs. Tyler said she has collected over 3,500 signatures in support of The Aquarium. Congressman Leon Panetta has supported her in Congress, she said.

But the Tylers said they don't have the "money or space" to conform to the Animal Welfare Act. They recently sent off a letter to the government asking for a waiver. And until they receive an answer, it's just a matter of waiting and hoping, along with continuing their care of and devotion to the animals, they said.

"We don't need to do this. We do it because we love the animals and that's our reward," said Mrs. Tyler.

Indian Know hike planned

A day hike to Indian Know will be held by the Sierra Club on Saturday, May 10.

The hike is open to everyone and hikers are encouraged to bring cameras and binoculars. For more information, call John Austin at 543-2915.

Nature hikes and talks

An illustrated talk on spring wildflowers will be presented by the Natural History Association meeting on Tuesday, May 13, at 7:30 p.m.

Dr. Steven Timbrook, education coordinator for the Santa Barbara Botanical Gardens, will hold the talk at the Morro Bay Museum of Natural History.

Nature programs sponsored by the society include:

Friday, May 9—a slide show of the dunes and plant communities of the sandspit will be shown at the Morro Bay State Park campfire center.

Saturday, May 10—A docent team will observe the ecology and geology of the sand dune ecosystem during a three mile hike. The tour will meet at the William Bros. Market (Los Osos) parking lot at 9:30 a.m.

Saturday, May 10—At 10 a.m., a two-mile hike from the saltmarsh to the charaparal on Black Hill will meet at Morro Bay State Park.

Saturday, May 10—A walk through the oak forest will include a discussion on the lifestyle of the Chumash Indians. The tour will begin at 10 a.m. at the Los Osos Oaks Reserve, one-half mile east of South Bay Blvd on Los Osos Valley Road.

Saturday, May 10—Bring a dahmking fork and fishing license to the Oregon Campground entrance for a Pismo clam dig from 2 p.m. to 6 p.m.

Saturday, May 10—An illustrated talk on the evolution of gray whales will be given at the Morro Bay State Park campfire center at 7:30 p.m.

Sunday, May 11—Mud shoes are needed for a walk in the salt marsh and mudflats. Participants will discuss the animals and plants of the area. The tour will meet at the Morro Bay Museum of Natural History at 10 a.m.

Davy Brown Campground re-opens

Nuclear materials hearing urged

SACRAMENTO (AP) - The governor asked federal officials Wednesday to hold public hearings in California before regulations on transporting radioactive materials are adopted.

In a letter to Transportation Secretary Neil Goldschmidt, Gov. Edmund Brown Jr. said proposed federal regulations would preempt state and local oversight over moving radioactive materials.

"California has reason to be concerned with and involved in decisions made regarding the transport of radioactive materials," Brown wrote.

"It is important that the state, county and local government agencies and people of the State of California be able to discuss the issue with the department," Brown said.

---

Iranians relocating US hostages

WASHINGTON (AP) - Militants were reported Wednesday to have moved a 12th group of American hostages from the U.S. Embassy in Tehran to another city. Two Iranian leaders rejected a suggestion by British Prime Minister Margaret Thatcher that the freedom of the U.S. prisoners could come faster because of the commando raid freeing Iranian hostages London.

In Milan, Italy, Iran's Ambassador to the United Nations, Mahmoud Gheisbaweh, was quoted as saying the Iranians were "in an honorable atmosphere." He called the American ''reactionary'' and added that Tehran was "not an acceptable way" once the hostage standoff could be "settled amicably.

"This is the moment that I have dreaded for 10 days," he said in an interview. "I am sorry for the vote not going against the hostage takers."

"The Senate approval came only hours after the Foreign Relations Committee gave its approval to Muskie and sent the nomination to the floor." Muskie testified before the panel earlier in the day.

Marines sent into refugee camp

KEY WEST, Fla. (AP) - U.S. Marines were called in Wednesday as thousands of Cuban refugees shelters short on space and food in a quickening tide that has brought over 22,000 "Freedom Flotilla" refugees to the United States.

Immigration officials processed 4,006 refugees today put the death toll in the embassy siege at several to five terrorists and two hostages. A sixth terrorist was in custody.

"They were fanatic," said Ronald Morris, 45, handyman at the embassy. "They would have shot everybody. I am lucky to be alive. I have seen some horrible things."

Another captive, British Broadcasting Corp. TV news producer Chris Bowler, said he would be released after he became ill, said.

"We all go through life thinking to ourselves how are we going to react ... will we be terribly strong and brave people if something happens to us. I realized I wasn't particularly brave or strong.

The 19 remaining hostages freed when British commandos stormed the embassy were asked by police not to talk about certain aspects of the takeover.

SLO Sugarless Shack opens

BY DEBBIE WARREN

Comparing the dietetic ice cream she was eating to that offered at Foster's Old Fashioned Freeze just down the street, a customer said, "It's as creamy; it's just not as sweet tasting." Bascom King, a Poly graduate visiting from Santa Barbara, agreed: "It is comparable; not as sweet. It's quite satisfying."

King was eating ice cream, along with about 11 other people, at the Sugarless Shack. Located at 486 Marsh St. in San Luis Obispo, the Sugarless Shack offers a variety of low calorie goodies, ranging from ice cream sundaes and cream puffs to cakes and cookies.

The ice cream is made of non-fat milk, flavorings and saccharine. Said according to manager Suzanne Sturges, it is the favorite item. It is soft serve and available in vanilla, chocolate or a swirl of both. A cup weighing eight ounces has 50 calories, and prices range from 60 cents to $1.

Most of the patrons at the Sugarless Shack on this particular sunny afternoon said the saccharine in the ice cream did not bother them.

Two exceptions were Kathy Hay and Dale Wold, who both work at the Los Verdes Montessori School.

Hay said the saccharine content does worry her but she eats it anyway because "it's a different evil—once in a while I get the real thing.''

The San Luis Obispo Sugarless Shack opens.

Hard-luck pitching gem shines

BY BARRY SHORTZ
Daily Sports Writer

The credentials of Sheila Langrock, Cal Poly's top softball hurler would easily earn her the title of hard-luck pitcher.

Langrock fashioned a phenomenal 0.72 earned run average, but could only manage a 10-12 won-loss record. Langrock pitched 17 games that were determined by one-run scores, but that doesn't seem to bother the 20-year-old from Woodside, California.

There is nothing you can do about it," said the slender red-head. Langrock pointed out that out of 40 games the Mustangs played this season, 27 were decided by one-run.

"Rock", as her teammates call her, achieved her fine statistics despite playing most of the season with a painful case of tendinitis in her right shoulder. Langrock said she should bothered her, but said that most of the players were playing hurt. Pitcher Rhonda Kiser has a sprained ankle, shortstop Bridget Cross has a broken right thumb, second baseman Lin Majors has knee problems and third baseman Lorene Yoshihara is recovering from an operation on her right hand.

Langrock who is a Biological Science major, achieved her fine statistics despite the fact that she lettered in softball and volleyball, thought about going to U.C. Davis after graduation but was undecided. Then I got a scholarship offer from Cal Poly to play softball, so I decided to come down and see the college," she said.

Fortunately for Cal Poly, Langrock liked San Luis Obispo and decided to play for the Mustangs. For the last three years that Langrock has pitched for Cal Poly, the Mustangs have gone to the AIAW Western Regionals. Last year, Langrock was the pitcher of record for all three of the Mustangs games in the Western Regionals. beating Fresno State but losing to U.C. Berkeley and Cal Poly Pomona.

It appeared as if Langrock would have a chance to play in her fourth Western Regionals this year when the team placed second in the Southern California Athletic League behind Cal Poly Pomona, but the Mustangs were not invited because of their losing 21-23 record and because some weekly results that Coach Kim Graham said she sent never reached the Western Regional committee.

The right-hand Langrock said her best pitch is her change-up and the team that gives her the most trouble is Cal Poly Pomona. Number one ranked Pomona, plays in the same conference as the Mustangs, but are a Division I team and will not compete in the Western Regionals.

"We always have had problems with Pomona," said Langrock who is a Biological Science major. "Until last month we hadn't beat Pomona in four years, but we finally beat them last month, 9-8."

Langrock contributes much of the Mustangs success on first-year coach Graham and a good Mustang defense. The Mustangs finished the season with a 7-8 conference record and a 21-23 overall record.

Coach Lance Harter’s bid to qualify additional women’s track members for the AIAW National Championships at Saturday’s Southwest Invitational failed, but the invitational did serve as a showcase for the Mustang’s fine distance runners.

Saying that Cal Poly dominated the 5,000-meter run would be an understatement, as the Mustang harriers swept the top three spots. Local girl Sheila O'Donnell continued to assert herself as one of the best distance runners on the West Coast by crossing the tape first with a time of 17:32. Kady Wanamaker took second place, clocking a 17:46, Evelyn Stewart completed the sweep, grabbing third with a 17:53 time.

Lillian Cordova tied her school record time of 2:30 in the 200 meters, but placed a distant ninth and did not qualify. Terryl Mulligan registered a fourth-place finish in the 400 meters with a time of 59.5 but did not qualify. Mulligan registered a fourth-place finish in the 400 meters with a time of 59.5 but did not qualify.

Harter will try again Friday when he sends out teammate Liz Douglas who punched in a 56.9.

Sports suffer indifference

BY TOM JOHNSON

It’s a dandy day at the Cal Poly campus as the ninth-ranked Cal Poly football team takes on the University of California, Los Angeles. The game is highly anticipated, with both teams vying for a chance to secure a spot in the top 10. The stadium is packed, and the crowd is electric as the two teams take to the field.

The game begins with a strong showing from the UCLA Bruins, who take the lead early on. The Cal Poly Mustangs fight back, however, and manage to tie the game by halftime. As the game continues, the two teams battle it out, with the Bruins ultimately prevailing with a narrow lead.

Despite the loss, the Mustangs can take pride in their resilience and fight throughout the game. Head Coach Mark Dantonio praised the team’s effort, saying “We played hard, we fought hard, and we never gave up. That’s what this team is all about.”

Off the field, the Mustangs are busy preparing for their next game, which will take place in two weeks against the University of Arizona. The team will be looking to bounce back with a strong performance against the Wildcats.

The crowd, meanwhile, is already looking forward to the next home game, which is scheduled for the following week. With the Mustangs’ fans feeling confident and满怀期待, the stadium will be buzzing with excitement as the team takes on the high-powered offense of the Arizona Wildcats. The game promises to be another thrilling match-up, and the Mustangs will be looking to make amends for their loss against UCLA.

Despite the challenges, the Mustangs remain focused on their goals and are determined to come out on top. With their fans by their side and a strong coaching staff, the team is ready to take on the next challenge and come out victorious. Stay tuned for the latest updates on the Mustangs’ season and be sure to support them at their next home game!
Prop 13

From page 1

provide a better balance of women and minorities in faculty and staff positions. Cal Poly received 4.1 faculty positions during Phase I, 3.0 faculty positions during Phase II, and an additional augmentation of 0.7 faculty positions which were transferred from Long Beach State, said Landers.

According to the allotment process, Cal Poly should have received $76,261 for Phase I and $83,001 for Phase II. There were problems with the funding, however, because the funds from the Phase I distribution arrived to late to hire faculty members for fall quarter and in some cases the funding was also too late to look for faculty members for winter quarter, said Malcolm Wilson, associate dean of graduate and undergraduate studies. As a result, most of the funds were used for spring quarter faculty positions.

Most of the positions that could be filled were for part-time faculty for this year only, said Wilson. This created another problem with hiring.

"We can't hire architects and engineers on a part-time basis," said Wilson. This is because most architects and engineers can get long-term positions for better salaries in business and industry and they are hesitant to relocate.

Shack

From page 9

Shack, which has been in operation since November, is owned by Don and Marilyn Chapman. The couple became involved in diet foods through Diet Watchers, a weight loss program which they joined in 1981.

"It's a slower weight loss," she said, "but we encourage slow weight loss. It's a slower weight loss than the usual 35 pounds per year."

Most of the positions filled at Cal Poly were for short-term positions with no guarantee of permanency.

Most of the positions filled at Cal Poly from funding of the Vanconcellos bill were part-time teaching positions. Also, most of the positions were difficult to fill because there is not guarantee the job will be available the next year, said Wilson. The assembly bill only made allowances for funding to be given during the 1979-80 academic year.

The funds not utilized because the positions could not be filled in the Phase I report on the project has not yet been completed.

The loss of these positions next year will be difficult because "we are squeezed as far as we can squeeze on faculty," said Wilson.

Proposition 13 hurt Cal Poly in that the number of sections of many courses offered were reduced, said Wilson. The reason it does not seem that Proposition 13 had a great effect on Cal Poly is because a tremendous amount of manipulations were made to try to keep from damaging instruction programs, said Wilson.

When asked how the dieter felt about the high amount of saccharine used in the Sugarless Shack's products, she said, "People in the program are not afraid of saccharine. Most of them have found what they've been saying isn't all truth."

Diet Watchers holds meetings each week featuring guest lecturers.

"The fee to join is $2 with a weekly $3 fee until the goal weight is reached. After that, meetings are free as long as the member stays within two pounds of the goal weight.

According to Sturges, the average weight loss over a period of six months is 25 to 50 pounds. "It's a slower weight loss," she said, "but we encourage slow weight loss. And you don't go hungry," she concluded.

Chess tourney is open

The Caissa Chess Club of Cal Poly is sponsoring a two-day tourney with a $75 first prize, from a total purse prize of $255. The tournament, open to the public, will be in UU rooms 219 and 220 and begin at 10 a.m. Saturday May 10.

Participants must be members of the U.S. Chess Federation or join at the tourney. Thus entry fees are $10 for Chess Federation members and $20 for non-members.

The tournament will be run on the four-round "Swiss" system of play, and everyone will have an opportunity to play every round.

Prizes will be awarded Sunday at the conclusion of the tournament.

ASI ELECTIONS - TODAY

YOU TELL ASI WHERE TO DIRECT YOUR ASI FEES

This year as part of the ASI elections, you can direct 5% of your student activity fees to the club or organization of your choice. Simply by writing your club's name and code number, you've told ASI how you want your money spent. Vote today, and give your club more money next year.

Poly prof writes book

BY MIKE CARROLL

Recently, New York City authorities tried to take custody of a child who was being abused by his parents. It was a difficult undertaking because at that time there were no child abuse laws in the New York City law books.

Authorities were able to save the child only after using a law prohibiting cruelty to animals.

Such a lack of public attention to children's rights prompted Cal Poly philosophy Professor Laurence Houlgate to write a book on the ethical and legal rights of juveniles.

In this book, released April 16, Houlgate criticizes paternalism and its influence on the juvenile justice system.

He said it is unjust to treat everyone under the age of 18 as incompetents.

Houlgate said there is no justification for treating people between the ages of 13 and 18 differently than adults, though he recognizes that younger children have special needs due to their lack of experience.

When juveniles are being tried for serious crimes, they should be treated as adults and as individuals, said Houlgate.

Houlgate, who teaches a course in child development, was just released from a one-year term as the California Legislative Assembly's liaison on children's rights. He plans to run for the state Assembly next year.

"I'm simply against physical punishment," said Houlgate.

"Now, I'm not suggesting children shouldn't be punished," said Houlgate, "but I'm simply against physical punishment."

Houlgate cited situations that occurred when children's rights were ignored. For example, he said, when judges neglected to consider children's rights when deciding custody, the children were ultimately put in the wrong homes.

Houlgate said he could see no justification for corporal punishment. Since it is not used on adults, he said, use of physical punishment should not be used on children.

Use of physical punishment only encourages children to solve their problems by hitting others, said he.

"If you're going to abuse your children, you're going to abuse your parents," said Houlgate.

"I'm simply against physical punishment," said Houlgate.

"Now, I'm not suggesting children shouldn't be punished," said Houlgate, "but I'm simply against physical punishment."

Houlgate said his book was the first substantial work on children's rights written by a philosopher since the 18th century. He spent a year researching the subject at the University of Virginia, which has an extensive legal library, before starting the book in 1977.

Since he wrote the book, Houlgate has invited invitations to appear on television talk shows- KSBY and KHJ's Midmorning L.A. television talks shows-KSBY
