Estimate reduced for Prop 9 impact

BY SUSAN MEE
Daily Student Writer

California State University and chancellor's office leaders have reduced their estimates of the expected impact of passage of Proposition 9.

The new estimates are between 4 and 8 percent of the 1981-82 school year and between 12 and 16 percent for 1981-82. The previous estimated impact was 20 to 30 percent.

Based on the new estimates, the CSUC Chancellor's office is preparing a 1981-82 contingency budget that assumes a 5 to 10 percent cut. Cal Poly is also preparing a contingency budget with cuts between 5 and 13 percent.

According to James Landreth, director of business affairs at Cal Poly, the CSUC officials can not set figures of actual cuts until, or if, Jarvis II passes.

In the case of Jarvis II, the administration has said that it will not be doing with the state legislature what the 1978 legislature did with the state budget.

Landreth said four factors still remain undetermined: the size of the state surplus at the end of this fiscal year; the income of the state; if Jarvis II will be retrospective; and if it will be based on 1980 or 1978 tax rates.

Until these figures are known, Landreth said the actual percent cut can not be determined.

At the Chancellor's request, a special committee has been set up to study the possible effects of the passage of Proposition 9. The committee, called the "support budget advisory group," will help develop a contingency budget plan for the university. A draft will be published this week.

Representative, Ellsberg to debate

Advocate tickets for the debate between Congressman Paul Mc Cleary and anti-war activist Daniel Ellsberg will cost the public $3.50 and students $2.50. Advance tickets are for sale at the University Union: tickets sold at the door will cost a dollar more.

Mc Cleary will argue the merits of his National Youth Service Act, which he introduced in Congress on March 13, 1979. His proposal would create a national service corps system in which volunteers would have the opportunity to select one of a number of options: two years of military service; six months of public service, followed by five and one-half years of reserve service for civilian service (Peace Corps, Forest Service, for example); or placement in a military battery.

Daniel Ellsberg's resistance to the draft rests in his opposition to President Carter's cold war policies, which Ellsberg sees as a "potential for nuclear war in the Middle East."
**Opinion**

**Election aftermath**

When all the ballots were in and counted late Thursday night, just about one out of every five Cal Poly students had voted in the ASI elections. Not an astonishing number by any means, but the 20.5 percent turnout was half a percent higher than last year and also the highest in the past four years.

This came as quite a surprise to ASI officials who were braced for a low voter turnout because of a lack of candidates running for presidential and vice-presidential positions.

The clue could be the ASI’s new revenue sharing plan. Under the new scheme, voters can direct one dollar of their vote to the group they choose. This year’s front runner was the Campus Crusade for Christ with $84. Other top dollar getters included the Society for the Advancement of Management with $50, Concert Committee with $44, ASI Outings with $46 and several fraternities and sororities with varying amounts.

Obviously, the revenue sharing play is quite a vote getter. And next year, when the plan is better known, revenue sharing should bring in even more votes to ASI elections.

But other good things came out of the elections.

Students soundly favored a measure to abolish preregistration by a vote of 2,349 to 803. The vote will become a recommendation to President Baker, who certainly cannot ignore the vote of the students on a issue directly related to them. Hopefully next year Cal Poly will see a fair system of registration, something we have supported through the year.

And most importantly, a new president, vice-president and 26 senators were elected to lead the students for another year. As in any election we have heard the promises of these new officials and only a year’s time can tell us if they will come true. We hope next year ASI can avoid the mistakes made this year with an apathetic senate and personality clashes in the president’s office.

President-elect Willie Huff and new Vice President Nick Forestiere look like sound thinkers who can carry through with their promises, but only time will tell.

**Letters**

**The unpublicized aspect**

Editors’ note: Carol Hallett’s open letter to Howard Jarvis published in the May 1 issue of the Mustang Daily.

**Editors:**

I would have thought that reader reaction would have been stronger to Howard Jarvis’ recent and shameful insult to Cal Poly students and faculty and to his outright lies about the City and County of San Luis Obispo. Certainly the insult extends beyond the confines of our county or our schools: It shows the contempt for education and government of any kind (and for anyone associated with it) by this crude-browed demagogue. Perhaps the proper community response will come on June 30.

But in April 28 “Open Letter to Howard Jarvis” from Assembly minority leader Carol Hallett, is to me an even more disturbing and unpublicized side to this episode. In the letter, published just two days after Jarvis’ verbal diarrhea was exposed in the remarkable Mustang Daily interview, Mrs. Hallett begins “chagrinned” and “disapppointed” in friend Jarvis’ “attitude and language.” I find it hard to believe that anyone who has appeared in Jarvis’ Tax Day TV Special and has supported his demagogy to this point would now suddenly discover that he has a foul mouth and a near-architectic attitude.

Carol’s political expertise in waiting is angrily demonstrated further by her rather mild rebuke to Howard: “You have left me no alternative but to... continue strongly to support Prop. 9” but not “condone what you have said or the manner in which you have said it.”

I believe there was another alternative that she could and ought to have taken, i.e. to renounce support of Jarvis and anything associated with him. Having done that, Mrs. Hallett then could have used her authority and influence as minority leader to constructively work toward a satisfactory legislative solution to the problem as she perceives it (as, for example, she did in support of income indexing). Aside from its many potential effects on local government services, Prop. 9 will have a direct effect at Cal Poly and other state universities (beyond the Applesauce publicized) will cause economic havoc and uncertainty among our faculty. Specifically, it will eliminate or severely restrict part-time teaching; it could result in the firing of those talented young faculty members most recently hired; and it will almost certainly even heavier teaching loads to the faculty who remain.

It has not been that long ago that Mrs. Hallett was a faculty wife here at Cal Poly. How soon she forgets! But, a former member of the educational system and as a current member of government system that Jarvis prays to destroy, Mrs. Hallett should demand, rather than “strongly urge” an apology from her former friend. Were Carol a true leader rather than a sophisticated and self-serving politician — she has demanded a retraction for the intelligence and opinions of all the residents of the 29th Assembly District, not just those in San Luis Obispo County.

In any event, I conclude that Mrs. Hallett’s letter was nothing more than a hollow, if not desparate, political stunt. It is unfortunate that she’s responsible for the 29th Assembly. Any opponent would likely have phased out her self-serving gesture called her bluff and publicly accused her of it.

Dr. Richard J. Kepra

Professor, Cal Poly State University and Fifth District supervisor (retired)

**Daily policy**

The policy of Mustang Daily regarding letters and submitted material such as letters and press releases outside of the newspaper is as follows:

Letters should be submitted to Mustang Daily office in Graphic Arts Building 226, 9 a.m. to 5 p.m. weekdays or by mail to Editor, Mustang Daily, 226 Cal Poly, San Luis Obispo, 93407. Letters must include the writer’s signature and social security number.
greenhouse by windmill power

LORI ANDERSON

Poly's ornamental horticulture department is a 10-foot windmill to use the energy needed to operate a solar greenhouse.

The windmill operates at speeds from 10-40 miles per hour.

"It powers a supplement to electrical power that can be plugged right into the house," Ochlyski said.

The windmill was put in operation since the 10th of May. The energy used to provide the windmill is used to operate and cool fans to maintain the appropriate temperature.

Ochlyski said they are uncertain as to how much energy the windmill will produce regularly, but he added, "I would hope that we'd be able to generate 80 percent of what we'd use.

Meters are recording the amounts of energy generated and the amount of energy used. The results will show what percentage of the power is supplied by the windmill, Ochlyski said.

The idea for the windmill originated last year when a former faculty member Rick Ochlyski saw the windmill in a magazine.

A company in Visalia donated the materials for the metal tower.

Ochlyski said most of the construction work was done voluntarily by instructors and students.

The only cost to the ornamental horticulture department was for cement for the platform, wiring from the windmill to the greenhouse and rental of a crane to put up the windmill.

Ochlyski said the windmill is in a good location where it gets wind from three directions and can be seen from Highway 1.

It shows the potential of wind energy and is a positive step towards producing small scale electricity, Ochlyski said. "It also is good practical research."

MECHANICAL ENGINEERING senior Scott Hansen sits atop part of his wood-gas generator.

Sweden idea fires generato

Getting Married?

Mechanical engineering senior Scott Hansen sits atop part of his wood-gas generator.

By Cheryl Johnson

A lesson from the past provided a Cal Poly mechanical engineering student with a senior project which could be an alternative energy source.

According to 21-year-old senior Scott Hansen, his idea to build a wood-gas generator, which burns wood to produce carbon monoxide as a fuel, is based on reports of Swedish engineers, who successfully did just that during World War II to power their country when Germany cut off Sweden's oil supplies.

The idea was given to Hansen by his ME advisor, Professor Roger Keech, who said his introduction to the generators was through the newsreels he saw when he was a child.

"When England and France ran out of petrol, they used to throw funny boxes on the back of cars," said Keech. He always wondered what the boxes were for.

He said he found his answer in a copy of Mechanics Illustrated from the 1940s which explained that the boxes contained charcoal-burning generators to power the cars. He also learned the Swedes developed fuels they called "gaugens" from burning wood in a similar manner.

The possibilities of its applications in the United States, where there is an abundant quantity of wood and charcoal, intrigued him, said Keech. He passed his interest along to Hansen.

That interest spurred Hansen to collect an array of everyday mechanical and automotive odds and ends—an old cylindrical water pressure tank, a car radiator, a truck oil bath filter, two round concrete receptacles and an engine, plus a varied assortment of filters, fans and tubing—which will be one of the few wood-gas generators in operation in the United States.

The basic idea, said Hansen, is to burn the wood, without using an excess of air.

"You are burning wood, but you are actually producing a gas," he said adding that burning would produce a bright red glow but no flames.

Arches from the charred wood will be collected in a concrete ash pot while the carbon monoxide gas will be sucked through a hole in the bottom and out a tube on the side of the generator.

At the bottom, the gas will come through a particle separator—the oil bath filter—to remove excess ashes and dust, said Hansen.

From there, the gas will flow through the water-immersed radiator to another filter where fine particles such as tar, will be removed. Next, the gas will move into an air mixer and finally to an engine, which will be hooked up to a dynometer—an instrument that measures the engine's horsepower.

"Once you start it up, all you have to do is to keep the wood burning," said Hansen.

What he is driving at, said Hansen, is to construct the generator and then do a gas analysis which would tell him what percentage of gas output he gets from the wood.

For several different reasons, Hansen said he plans to burn oak. First, it is a wood which produces a great deal of heat when burned. Also, he hopes to collect information on the wood because no data exists on what percentage of gas can be obtained by burning it. Hansen said he has a source who is willing to supply him with free wood.

According to Hansen, figures from 1940 show the cost of a gallon of gas then was equal to the price of 20 pounds of wood.

In addition to carbon monoxide, the burning wood will also produce hydrogen, nitrogen and some methane, said Hansen. Most of the waste material produced should be in the form of water, he added, making the process relatively non-polluting.

"I suppose there are a lot of people that would dispute that," Hansen said.

He said people might also object to the production of wood gas generators because ecological reasons favor preservation.

One market possibility would be use of a central generating system where the gas produced would bottled and then sold, suggested Hansen.

However, because carbon monoxide is a toxic gas, Hansen said the United States is ready for the technology.

While the Swedes once hauled the generator in special carts behind their buses and now use a sophisticated wood-gas generating system, Hansen said a generator such as the one he building would have to be modified for use automobiles. In its present form, it would add pounds to the weight of the car.

But the generator would be perfect for producing electricity to pump water and turn on lights in mountain cabins.

Hansen said that while he finishes his senior project, the wood-gas generator will remain property of the department. It is hoped that other engineering students will continue work on the generator, refining the system into a more sophisticated end option.

Keech said the wood-gas generator because the building is more akin to an internal combustion engine than an electric motor in present-day cars.

"We are going to let history pick up what they left off and continue the development of something that was abandoned," Keech said.

**Newsline**

Navy files over Iranian ships

(AP) - Several American helicopters flew over Iranian ships working in Persian Gulf oil fields but switched course after Iran's armed forces were alerted, Tehran Radio reported Tuesday. The Pentagon denied the report.

But Iran's Oil Minister Ali Akbar Moinfar was quoted as saying neutrality at Iran oil fields would be stepped up following the reported incident. Monday night, and the official Soviet news agency Tass denounced the "new provocation by the American military," as "fresh proof of the fact that Washington continues to make plans for new military ventures against Iran.

Tass quoted the Tehran newspaper, Bidadam, as saying the U.S. Navy helicopters dropped a foamy chemical substance over the Persian Gulf, causing a large fire on the water near Iran's coast.

The United States has about two dozen ships off Iran, including aircraft carriers from which helicopters can fly. However, the Pentagon said no helicopters were in the area.

Tehran Radio also quoted the commander of the Bandar Abbas Air Base in southeastern Iran as saying there had been a military intrusion, of an unspecified nature, near there Monday night.

There were no reports of fighting, however, and the report said none of the unidentified intruders were found. Bandar Abbas is located near the Strait of Hormuz, through which much of the world's oil passes for shipment overseas.

**Military Overthrows Uganda**

KAMPALA Uganda (AP) - The head of Uganda's rebellious military commission, accusing President Milton Obote of corruption, declared Tuesday that the country's civilian administration had been dissolved and a military and government commission formed.

Paulo Mwanga, chairman of the commission and minister for defense, said in a statement read over official Uganda radio that executive power would be held by a three- or four-man presidential commission.

**Terrorists flown to Tehran**

(AP) - The bodies of the two dead men murdered by the terrorists who held Iran's Embassy in London for six days were returned to Tehran Tuesday and given relatives in Britain and the United States for the deaths.

Foreign Minister Sadegh Ghotbzadeh blamed Iraq, and the militants holding the American hostages blamed the Carter administration.

Ghotbzadeh praised the two dead men—Abbas Lavasani and Ali Akbar Samadzadah—and declared the "criminal Baathist regime" in Iraq killed them. Although Iranian government leaders praised the British government and its commandos for rescuing most of the hostages, some Tehran newspapers have said Britain tacitly approved the embassy seizure in hopes of gaining freedom for the 53 American hostages in Iran.

**LSD users may get jail term**

SACRAMENTO (AP) - Anyone convicted of using LSD or PCP would be required to spend at least 90 days in jail if a bill approved Tuesday by the state Senate becomes law.

The upper house voted 24-1 to approve SB1129 by Sen. Newton Russell, R-Glendale.

Russell said the bill recognizes that LSD and PCP both hallucinogens are equally, if not more, dangerous than heroin.

But Sen. Alan Sieroty, Los Angeles, said the bill was a waste of tax money, that putting drug users in jail would not curb drug use.

Workers design custom products

Achievement House is responsible for various community services to industry, education and even hot tub production.

Walking though the indoor portion of Achievement House, the first room is the woodshop, where clients, mostly middle-aged men, design everything from pots for plants to beautiful redwood furniture.

The shop works by special order, making handcrafted tables, tubs and special orders at a reasonable price, according to Achievement House Director Elden Kirby. The shop is filled with saws, lathes and all kinds of woodworking equipment.

Connected to the woodshop is the typing and mimeo room, where about 25 workers type, sort, label and address letters, handbooks and flyers under the supervision of Jackie Grimshaw, who has worked at Achievement House for about 5 years.

Right now, the mimeo department is working on labeling, bundling and categorizing 35,000 catalogues for Cal Poly's Vocational Educational Productions. Other orders include work for Alumni Services, Extension bulletins and Cal Poly Today handouts.

"One thing about working with Cal Poly is they are really very cooperative," said Grimshaw. There are several standing orders from the university.

The clients are paid a percentage of the profit made from the jobs. Grimshaw said she hopes to move to piecework soon, and have clients paid by their rate of speed. She is hoping to get more storage space and increase production soon.

"These people are easy to work with. I love my job," she said. "They work really hard; they are just fantastic."

VEP is a direct mail operation on campus. They rely on Achievement House to label and categorize 15,000 newletters four times each year, and 35,000 catalogues once each year. The catalogues contain agricultural information and are mailed to high schools across the U.S.

"We've found Achievement House to be highly efficient, very prompt and capable," said Ed Apodaca of VEP. "They always meet deadlines; we're just happy to have them around."

A hot tub contract from Cooperidge Hot Tub in San Luis Obispo is another standing order. Preparatory work on electronics parts is completed by the clients of Achievement House for PTK Corporation in Los Osos. The work is usually very repetitious.

A new building is going up at Achievement House, paid for by funds from the community. It will be used for more industrial type repetitious work, according to Kirby. Once the building is completed, there may be room for about 30 more clients.

The last stop is the Bargain Basement, a thrift store with everything a customer could desire.

"We've found Achievement House to be highly efficient, very prompt and capable," said Ed Apodaca of VEP. "They always meet deadlines; we're just happy to have them around."

The last stop is the Bargain Basement, a thrift store with everything a customer could desire.

"In the summertime, when people are moving, especially Cal Poly students, we have so much stuff we have to move it outside," said Client Program Planner Anita Fisher.

"This is an adult workshop," said Fisher. "The clients just snap to. They want to be part of the whole situation."

Fisher estimated there are about 700 handicapped adults who could participate at Achievement House. She feels that about 200 or more are sitting at home, doing nothing.

"Sometimes parents don't have the expectation that their kids can accomplish," said Fisher. "Sometimes parents don't have the expectation that their kids can accomplish," said Fisher. Achievement House accepts three to four new clients each year.

What about romance? Does it exist at Achievement House?

"Yes, it does," said Fisher. But it's more on the level of a boyfriend or girlfriend for a couple weeks, holding hands, maybe a peck on the cheek. It never goes any further, she said.
Handicapped do well at OH

A visitor who comes to Achievement House will first notice the well-kept grounds surrounding the entrance, and then the greenhouses and open gardens maintained by handicapped workers.

Supervised by David Perez, a Cal Poly student, clients maintain, transplant and propagate all kinds of plants. They spend most of their time outdoors, and work with landscape plants, fushias and annuals.

"I try to get them to do everything—do all the cleaning," said Perez, an ornamental horticulture major. "We're going to have a big garden," he said, "and mainly grow vegetables to be eaten by the clients here."

Whenever a rainy day comes along, Perez teaches indoor activities. He has spent time in the last week teaching sign language to all the clients, for the benefit of one who doesn't speak.

As a senior project Perez has implemented the area of handicapped education in horticulture, a concept new to the OH department at Cal Poly. The 26-year-old senior said he plans to go into special education related to ornamental horticulture.

Teaching horticulture practices to the mentally handicapped has been a challenge to Perez.

"I learned a lot of patience and to work at a slower pace. You can't be rushing around to get things done," he said.

Perez hopes to go into nursery management with the handicapped. "This is the first thing I've been steady with," he said. "I haven't wanted or had the desire to try anything else."

The appearance of the two greenhouses and three shadehouses is one of neatness and orderliness, despite a week-long storm. The goal the organization has of developing a handicapped person's "maximum potential" is illustrated here.

About the pictures

Achievement house is a place where people learn useful trades. Our Photographer Ray Acevedo isolated these workers on Wednesday afternoon:

- Connine Logan shovels dirt, top left, where a tree will be planted.
- Top center, Charles Hopper rolls clay for a wind chime.
- Eileen Bove helps fold and mail pamphlets for Cal Poly, top right.
- Charles Teeters, bottom center, lacquers a picnic table.
- Bottom right, Hopper takes a break from work on the wind chime.

The aura surrounding Achievement House is based on production by the handicapped members of society who work in the spirit of happiness and friendship.

The 23-year-old organization. The handicapped man or woman is no less a person, is no less an individual than any other person, according to the guidelines of the House. The handicapped claim rights with others and the respect of their fellow men.

Someday, members of the House may be able to work out in the real world, while others will always belong in the sheltered environment.

The long term goal of the organization is to completely demolish the old existing buildings and build new ones.

Money gained from fund-raising efforts is used for the express purpose of improving facilities—maintaining old buildings and building new ones.

The aura surrounding Achievement House is based on production by the handicapped members of society who work in the spirit of happiness and friendship.
The committee is meeting weekly to discuss the possible cuts. According to Landreth, an enrollment cap will be the first likely alternative.

ew team breeds success ... so far

The young Cal Poly Lacrosse Club, which first began playing four months ago, stunned the Santa Clara Club 6-5 in the Mustang's maiden voyage.

The game was deadlocked 5-5 with minutes remaining. Player-Coach Bill Ramsey fired a shot from the crosse line past the outstretched hands of the Santa Clara goalie to clinch the victory.

Gareheart, Bob Prichard, Phil Poeistra, Doug Apan and Kurt Jensen also scored for Poly. Photographer Jim Malone caught the Mustangs in action a month ago when the team was polishing its edges for their encounter with Santa Clara.

Mike Smith practiced his work, sending a teammate tumbling. Poeistra sprints ahead of Eric Naslund looking for a shot toward the goal.

Bod and Ernie Jauregui stand poised, ready to face for the faceoff.

Nielsen, who stopped Santa Clara's of­fense Saturday, snags a high goal shot.

Story by Tom Johnson

Photos by Jim Malone
The complaint was filed with the Department of Health, Education and Welfare last June and alleged there was discrimination against the women's intercollegiate sports program, West explained. He said the complaint was signed by ASI senators and then ASI president Larry Robinson.

As evidence that Cal Poly was making an effort to adhere to Title IX, West cited that the number of housing scholarships for women athletes will increase from about 17 this year to 33 next year.

In an effort to speed up compliance with Title IX, a bill is under consideration in the state assembly that would require all state and community colleges to develop rules ensuring equal opportunities for both male and female athletes.

West said he is not in favor of the bill because its terminology is unclear and it would set up an elaborate state reporting system. This would simply be a duplication of what is required by federal legislation, he said.

West also believes universities should be given an opportunity to follow HEW's policy guidelines before such a bill should be passed. West is not against the concept of equity behind the bill, however.

He also said athletic programs in general at Cal Poly are facing limited funds since the ASI and IRA money that now goes toward athletics is less than in previous years.

“We are in a situation where there has been a reduction in staffing and operating expenses which the state has allocated for intercollegiate athletics,” said West.

He added that the spending limits were largely a result of the impact of Proposition 13.

David Ciano, director of Judicial Affairs, said the limits on athletic funding were also due to the limited number of spectators in San Luis Obispo.

“Cal Poly is not the UCLA of the central coast,” said Ciano.

The complaint was filed by students last year, Cal Poly third baseman Bob Weirum was the lone Mustang named to the first team All-California Collegiate Athletic Association, West said and it was announced Tuesday.

Senior Weirum, who has anchored the Poly infield for the last two years, hit .326 this season, ranking him third on the team. Weirum led the team in doubles with 12, hit four home runs, and drove in 29 runs this season. Before coming to Cal Poly, he starred at San Marcos High and at Santa Barbara City College.

Three of Weirum's teammates were chosen as All-Conference. West said there are no plans to appeal the decision.

Bob Parr led the club in hitting, blasting a record-setting 3.54 clip. Parr, a senior, was selected to the Palisades High School All-Star squad. He also led the team in RBIs with 37 and last two months of the season, raising his average to 1.16 points in the last two months.

Parr also led the club in home runs with six and also in runs batted in with 43.

Pitcher Silva paced the Mustang pitching staff in leading the club with a 3.27 ERA. Silva, who played at St. Joseph's High School in San Diego and Santa Barbara City College, also led the team in walks with a 3.47 ratio. He was voted the league MVP with a 6-2 record. Silva, who led the club in strikeouts, was selected to the team.

Parr led the club in RBIs with 37.

The complaint was filed by the Department of Health, Education and Welfare last June and alleged there was discrimination against the women's intercollegiate sports program. West explained. He said the complaint was signed by ASI senators and then ASI president Larry Robinson.

As evidence that Cal Poly was making an effort to adhere to Title IX, West cited that the number of housing scholarships for women athletes will increase from about 17 this year to 33 next year.

In an effort to speed up compliance with Title IX, a bill is under consideration in the state assembly that would require all state and community colleges to develop rules ensuring equal opportunities for both male and female athletes.

West said he is not in favor of the bill because its terminology is unclear and it would set up an elaborate state reporting system. This would simply be a duplication of what is required by federal legislation, he said.

West also believes universities should be given an opportunity to follow HEW's policy guidelines before such a bill should be passed. West is not against the concept of equity behind the bill, however.

He also said athletic programs in general at Cal Poly are facing limited funds since the ASI and IRA money that now goes toward athletics is less than in previous years.

“We are in a situation where there has been a reduction in staffing and operating expenses which the state has allocated for intercollegiate athletics,” said West.

He added that the spending limits were largely a result of the impact of Proposition 13.

David Ciano, director of Judicial Affairs, said the limits on athletic funding were also due to the limited number of spectators in San Luis Obispo.

“Cal Poly is not the UCLA of the central coast,” said Ciano.

The complaint was filed by students last year, Cal Poly third baseman Bob Weirum was the lone Mustang named to the first team All-California Collegiate Athletic Association, West said and it was announced Tuesday.

Senior Weirum, who has anchored the Poly infield for the last two years, hit .326 this season, ranking him third on the team. Weirum led the team in doubles with 12, hit four home runs, and drove in 29 runs this season. Before coming to Cal Poly, he starred at San Marcos High and at Santa Barbara City College.

Three of Weirum's teammates were chosen as All-Conference. West said there are no plans to appeal the decision.

Bob Parr led the club in hitting, blasting a record-setting 3.54 clip. Parr, a senior, was selected to the Palisades High School All-Star squad. He also led the team in RBIs with 37 and last two months of the season, raising his average to 1.16 points in the last two months.

Parr also led the club in home runs with six and also in runs batted in with 43.

Pitcher Silva paced the Mustang pitching staff in leading the club with a 3.27 ERA. Silva, who played at St. Joseph's High School in San Diego and Santa Barbara City College, also led the team in walks with a 3.47 ratio. He was voted the league MVP with a 6-2 record. Silva, who led the club in strikeouts, was selected to the team.

Parr led the club in RBIs with 37.

MUSICAL RACE RACED OFF TO A 26-YEAR-OLD'S SONG

By MEL ROBERTS

SAN FRANCISCO (AP) — The tango, the bolero, the rumba, the habanera — whatever your passion, chances are it shares a connection with the Gold Strike, the world's oldest running staged musical race.

The race, held on the Grand Stand Track at Golden Gate Fields, is a 900-yard sprint. The field is made up of three heats, with each heat containing four riders.

"It's a celebration of music and art," said Joy Jensen, the Gold Strike's public relations director. "It's a way to bring people together through the power of dance and music."
MEMORIAL DAY SPECIALS

Memorials thru Memorial Day, May 26
