Assemblyman rakes aid cut process

BY MIKE CARROLL

The chairman of the subcommittee on educational reform in the state assembly has criticized the state's $600,000 in financial aid awards to Cal Poly students were cancelled this summer.

In a recent letter to Cal Poly President Warren Baker, Assemblyman Gary Hart (D-Santa Barbara) charged "the reduction method used by your campus creates a serious inequity among aid recipients."

Both Baker and Financial Aid Director Lawrence Wolf have defended the aid cuts as the only option available in an emergency situation.

The financial aid cancellations were sent out in July to 553 students in response to reductions in expected federal funds.

Only those with financial aid offers of $1,000 or less were affected - those with the greatest need were served first.

Hart contends that when other state universities faced similar reductions in financial aid, they opted to spread the burden proportionately among all aid recipients. Wolf, however, dealt with Cal Poly's financial aid reductions by rescinding awards to those with the least need.

The financial aid director said funds are insufficient, federal regulations dictate that aid awards must be made in a succession of need.

Hart, on the other hand, maintains the Department of Education in Washington does not restrict individual financial aid officers from spreading the burden of federal aid cuts equally among all aid recipients. He said that "a survey of financial aid officers at three other state university campuses indicates that they have all opted for proportional reduction" when faced with aid cuts.

But, said Wolf, "I'm not aware of any school that makes a pro rata (proportional) adjustment. I have always felt the literal interpretation of the federal guidelines - the neediest have priority.

The financial aid director, who has been at Cal Poly for seven years, added that the Department of Education's regulations do not allow the flexibility Hart implies.

This summer was the first time in Cal Poly's history that such cuts were made. As reasons behind the cancellations, Wolf cited the increasing number of students eligible for the program, the 30 percent increase of students applying for aid during summer quarter and a key punch error that caused the university to overestimate its funds.

Another factor in the aid cuts was Wolf's initiative to get notification letters out to students in April and May - months before fall quarter was to begin.

"...the reduction method used by your campus (Cal Poly) creates a serious inequity among aid recipients."

--Hart

In past years, Wolf said, "We were not doing students a favor by not letting them know what funds were available before starting school."

But less than three months after the notification letters were sent, Wolf discovered the university was overwhelmed and dispatched the 553 cancellation letters.

"There's no way this is going to happen again," the financial aid director said. "If it occurred again, I'd probably be selling used cars."

He said one way to avoid making the same mistake again is to go back to the old method of waiting until the available funds and the students' aggregate needs are determined before sending out award notices.

The police and news media must trust each other. That was the keynote of a panel meeting of media and police representatives Thursday night in Science E-46. The main object of the meeting was to discuss problems of press and police relationships.

Chief Roger Neuman of the San Luis Obispo police department agreed that trust was an important part of media interaction.

"If a reporter breaks the trust," added Neuman, "he probably won't get much cooperation from the agency."

"It's important to respect 'off-record' information," added Al Olson, Chief of Police in Morro Bay. "I think that if a reporter violated that trust he wouldn't get any more information from me."

The meeting was sponsored by the Society of Professional Journalists Sigma Delta Chi, and was attended by approximately 55 people, most of whom were journalism majors. The panelists included Roger Neuman, Tom Campbell, Al Olson, Lon W. Allan, Atascadero News editor, John Grimmie, the Highway Patrol field operations, and Mike Powell, KVEC Radio news director who acted as moderator.

Tom Campbell of KSBY news spoke of the Code 20 system which is used by the media to pick up important news stories over police radio.

"If agencies and the media used Code 20 properly, it could be profitable for both areas," said Campbell, "but the agencies and subscribers don't think it works because it's not successful," he added.

Chief Neuman agrees that Code 20 hasn't worked as well as it possibly could, but said, "The new Silent Digital System will force police to use Code 20 because the media won't be able to monitor it."

The silent digital system consists of a terminal in the car that digitally reads out calls in code to the officers.

"I feel confident that we can work together and solve any problems that exist between media and police agencies," concluded Al Olson.

Trust is a must for law, media

BY MIKE TRACHOTIS

The police and news media must trust each other. That was the keynote of a panel meeting of media and police representatives Thursday night in Science E-46. The main object of the meeting was to discuss problems of press and police relationships.

Chief Roger Neuman of the San Luis Obispo police department agreed that trust was an important part of media interaction.

"If a reporter breaks the trust," added Neuman, "he probably won't get much cooperation from the agency."

"It's important to respect 'off-record' information," added Al Olson, Chief of Police in Morro Bay. "I think that if a reporter violated that trust he wouldn't get any more information from me."

The meeting was sponsored by the Society of Professional Journalists Sigma Delta Chi, and was attended by approximately 55 people, most of whom were journalism majors. The panelists included Roger Neuman, Tom Campbell, Al Olson, Lon W. Allan, Atascadero News editor, John Grimmie, the Highway Patrol field operations, and Mike Powell, KVEC Radio news director who acted as moderator.

Tom Campbell of KSBY news spoke of the Code 20 system which is used by the media to pick up important news stories over police radio.

"If agencies and the media used Code 20 properly, it could be profitable for both areas," said Campbell, "but the agencies and subscribers don't think it works because it's not successful," he added.

Chief Neuman agrees that Code 20 hasn't worked as well as it possibly could, but said, "The new Silent Digital System will force police to use Code 20 because the media won't be able to monitor it."

The silent digital system consists of a terminal in the car that digitally reads out calls in code to the officers.

"I feel confident that we can work together and solve any problems that exist between media and police agencies," concluded Al Olson.
Oilfields damaged in Iran, Iraq

Baghdad, Iraq (AP) — In an alarming new turn in their war, Iran and Iraq have begun sending jet bombers against each other’s oil installations, the most sensitive areas of their economies. The extent of damage cannot be determined precisely, but Iraq has strengthened the defense around some of its oilfields.

Iraq has reinforced anti-aircraft defenses around the northern oilfields in Kirkuk and the southern storage and shipping installations on the disputed Shatt al-Arab border waterway, informants said Monday. They said Iraq's oil output was down to 1 million barrels a day as a result of damage caused by raiding Iranian jets.

The extent of damage to the oil installations, although believed to be extensive, could not be determined. Diplomatic sources said Iraq and Iran both have known when foreign contractors are involved and make repairs.

Iraqi's Khor al-Amaya and Mina al-Brik oil shipping terminals were reported not operating, mainly because capitals of oil tankers were afraid to try and get the gulf to reach them. There have been conflicting reports about damage inflicted by Iranian warplanes on the two terminals.

In the Basra region of southern Iraq, a bridge destroyed on the Shatt al-Arab, informants said the Iranians inflicted heavy damage on al-Murtaza, Kut and Fao oil storage compounds.

On the Iranian side, according to sources here, there has been vast damage to the Kharg Island installations, the country's biggest loading port, and the Abadan refinery, one of the world's largest, has reportedly been flattened.

The disputed waterway area is the site of many of Iraq's and Iran's oil installations.

Shah al-Arab has fallen to the Iraqis, who have poured artillery and warplanes fire into Iran's Abadan refinery during the past two weeks of hostilities.

The court, without comment, turned down arguments by Santa Barbara County lawyers that policy treating fire fighters and police officers differently from other Californians, including all other public employees, is unconstitutional.

Washington (AP) — The Supreme Court on Monday refused to disturb California's policy of denying firefighters and police officers deferential right to file negligence suits when hurt or killed on duty.

Sacramento (AP) — A teenager who was raped and had both arms cut off two years ago will be compensated for part of her expenses by a state board that handles such cases, her lawyer said Monday in a conclusively Monday over whether she was a California resident.

Mary Vincent, now 17, attended the school of Control hearing with her mother but did not testify. Lucy Vincent said her daughter has no recollection of anything that happened before the September 1978 attack.

Lori Singleton, the authorities say picked Miss Vincent up hitchhiking in Richmond, east of San Francisco, then raped her, cut off both her arms below the elbow with an ax and left her for dead, is now serving her 14-year prison sentence.

She is seeking $23,500 from the state under the Victim of Violent Crime Act. That law, one of the few to incorporate the victim's rights, compensates victims for medical expenses and income lost.

The problem was that the law provides benefits only for California residents.

Miss Vincent, then 15, had left her parents' Las Vegas home less than six months earlier and was staying with her grandfather in the Riverside County town of Corona, but state law assumes that the victim is a California resident with her parents unless the family was married or "emanipicated." Her lawyers argued that she was properly emancipated, saying that at the time of the attack she had left her parents' home for good, with their consent, had attended school in the Corona area and intended to stay in California. Mrs. Vincent said her daughter telephoned her regularly from California in 1978.

But deputy state Controller Peter Pelkofer, representing Controller Ken Cory on the board, said the law on emancipated minors at the time, which has since been changed, generally covered only those in their late teens and required a showing of self-sufficiency.

We need no introduction—you know who we are and what we do. What we want to say is, we need you.

If you have a BSEE you will be analyzing and evaluating designs of a wide variety of products, systems and materials to determine whether or not they meet acceptable safety levels. You'll deal directly with clients and be a problem solver. We offer the following:

Mello, four presidential reps present a political potpourri

BY JIM MALONE

Staff Writer

State senate candidate Henry Mello and spokesmen for four presidential candidates aired their views recently on the equal rights amendment, abortion funding, the draft, and a host of other issues at voters' forum in San Luis Obispo.

Mello, a two-term assemblyman from Wat- senville, focused his Thursday night address on his work on women's issues while in the assembly and during an eight-year stint on the Monterey County Board of Supervisors.

The Democratic candidate supports the ERA and federal abortion funding, but said more money needs to be spent on "family life education."

Mello's opponent in the race for the 19th senatorial district seat, Republican Miss Laura Ford, invited the National Organization for Women's forum at St. Stephen's Episcopal Church, but was unable to attend, according to a NOW spokesman.

Bird said her main goal after fielding a dozen questions from the mostly female audience, Mello gave way to representatives of Ronald Reagan, Jimmy Carter, John Anderson, and the Libertarian candidate, Ed Clark.

Reagan spokesman Jim Miller of Nipomo, the speaking chairman of the San Luis Obispo County Republican Party, said the former California governor "rejects the idea that we have to do with less" in order to get the economy on the right track.

Richard Kranzoff, a political science professor at Cal Poly, proposed on behalf of Anderson a moratorium on construction of new nuclear power plants. Kranzoff also noted Anderson was opposed to repatriation of immigrants and to changes in farm labor laws.

New building gets CSUC OK

BY MIKE CARROLL

The California State University and Colleges Board of Trustees adopted a capital outlay program in late September that includes preliminary plans for constructing a $10 million Engineering South building at Cal Poly.

Douglas Gerard, executive dean for facilities planning, said Thursday that $184,000 was allocated for the preliminary plans in the board's 1981-82 budget request. Before Cal Poly could receive the funds, however, the board's budget must go to the state Legislature for approval and be approved by the governor, he said.

The executive dean said Sacramento's reaction to the budget would not come until June of next year. Even if the preliminary plans are approved, Gerard said, it would only mark the first step of a "complex and exacting process.

After the preliminary plans are drawn up, working drawings costing $300,000 must be approved by 1982. The $10 million construction project would begin in 1983 and be completed the following year, Gerard said.

He indicated the new engineering facility, if approved, would be located where the C-8 parking lot now stands—north of Chase Hall and across from Mustang Stadium.

Engineering South is envisioned to have nine laboratories, a few classrooms and 50 faculty offices, the executive dean said.

Gerard feels the present engineering facilities at Cal Poly are inadequate. He said the current facilities no longer satisfy the needs of the engineering curriculum.

The construction of Engineering South will allow Cal Poly to catch up with other state universities, he said.

Though he said the legislature will probably approve the preliminary plans, Gerard speculated the state leaders might question the expansion of engineering facilities at Cal Poly when there are vacancies in engineering departments at other state universities.

"But there is no question we can justify the facility because of the shortage of space for engineers," Gerard said.

Engineering South is part of a master plan that will expand and improve Cal Poly's facilities during the 1980's and beyond.

Autohypnosis

"Cal Poly Extended Programs is sponsoring a self hypnotic course for people who wish to achieve goals such as losing weight or gaining confidence through hypnosis. One unit of professional credit is offered for the 83-82 course. The course will meet from 7 to 9 p.m. on Thursdays throughout October at Aroyo Grande High School. For more information and registration call 564-2053.

Landscaping

An Extended Education course entitled "Landscaping Your Home" will be Oct. 10 and 17 in Room 306 of the Agriculture Building. Openings are still available in the class for those who want to design landscape plans. The course will cover materials needed and maintenance for the courses for $43.50. For more information call Cal Poly Extension at 546-2053.

American Foresters

The first meeting of the Cal Poly student chapter of the Society of American Foresters will be at 11 a.m. Oct. 9 in Room B-4 of the Science Building. New students in Natural Resource management are invited to attend.

National Marketing

The first meeting of the National Ag Marketing Association will be at 7 p.m. Oct. 7 in Room 219 of the Science North Building. New and former members are welcome to the meeting.

Horse Show Team

The Cal Poly Horse Show Team will meet 7 p.m. Oct. 7 in the Agriculture Building Lobby to discuss upcoming horse shows and pick the team for an Oct. 11 show.

UBSAC

The United Black Students Awareness Council will meet at 7:30 p.m. Tuesday in Room 219 of the University Union to discuss committee participation and fundraisers.

Small Farm Animals

A Cal Poly Extension course entitled "Small Farm Animals" begins at 7 p.m. Tuesday, Oct. 7 and will continue through Nov. 4. The course is designed for persons interested in backyard farming and the raising and breeding of small farm animals. The course is offered for $29.40 for the course. For more information and registration call the Extension Office at 546-2053.

Wildlife Club

The Wildlife Club will meet at 11 a.m. Tuesday, Oct. 7 in Rooms E-46 of the Science Building. New members are welcome.

Ecology Action

The Ecology Action club will meet at 11 a.m. Tuesday in room 201 of the Science North Building.

Counseling

"Ethical and legal issues in counseling" is the title for a Cal Student Services course beginning Oct. 11 and continuing through Nov. 16.

The course is designed to examine the ethical and legal responsibilities involved in counseling. The 857 three-unit course is open to students, professors, teachers and parents.

Computer Science and Electrical Engineering Majors

San Francisco Bay Area companies developing state of the art computer software and hardware for integrated voice and data communications systems seek talented individuals interested in:

SOFTWARE
- Operating Systems
- Real Time Distributed Computing
- Data Communications
- Office Automation Applications
- Office of the Future Applications
- Diagnostics
- Software Tools

HARDWARE
- Microprocessor Applications
- Digital and Analog Design
- Telephony
- Data Communications

Ralom Corporation, founded in 1969 has grown 50% - 100% each year and currently employs 100 fulltime employees. Ralom's telecommunications department is the leading manufacturer of software and data communications systems. Included in Ralom's outstanding benefits package is a three month paid sabbatical after five years of service and a profit sharing plan.

Sports doctor offers tips to ward off athletic injuries

By Becky Marr

Two fistfuls of vitamins and a pound of protein powder for breakfast is not the way to good health, according to an Olympic sports doctor.

Dr. Leroy Perry, chiropractor for athletes of 28 countries, spoke on sports medicine Saturday night at Cal Poly Theatre.

The Pasadena, California based doctor is a member of the Foundation for Athletic Research and Education and was a doctor for the 1980 United States bobsled team.

Perry believes in a prevention trial to guard against injury. "The trial consists of structure, nutrition, and psychology," said Dr. Perry.

He explained structure as an understanding of how all the body’s muscles work together to achieve motion and balance.

"Good posture and equal development of muscles make for a better, faster athlete with fewer injuries," maintained Perry.

He recommends swimming as the means to attain both; but not just any swimming. "The most effective is freestyle and backstroke with the leg held straight and a waving motion of the arms through the water. This will exercise many more groups of muscles," Perry emphasized as best for posture.

Stating that most people don’t have good posture, Perry requested five male volunteers from the audience join him onstage. First, Perry demonstrated his statement by drawing a tape across the men’s shoulders and hips. "None of them were equal," said Perry.

Next, the men were told to envision helium balloons tied to their foreheads and belt buckles with a strong wind blowing behind them. Perry instructed them to walk around the stage imagining the balloons and wind. Perry then asked the audience of about 100 if they saw any difference in the men. People in the audience reacted with laughter.

The second part of Perry’s trial is nutrition of which a significant portion is water. "Two-thirds ounce of water per pound of body weight daily is a good measure for the average person," said Perry. He recommends no alcohol, sugar, chocolate, wheat or milk as they tend to be pre-sensitizers. "These foods are mucous formers that interfere with breathing," he said.

The most sensible foods are fresh vegetables and fruits and lean meats like poultry and fish.

He pointed out the best kind of water is that which comes from the tap. "Distilled water has been shown to leach minerals from the human body. It even leaches the hydrocarbons from the plastic containers it comes in," Perry advised.

The final part of his trial is psychology and, by that, Perry means the athlete must understand what hurts him and why.

"Athletes participating in unilateral sports like tennis, or baseball, or any sport that uses primarily one side of the body should realize the hazards of over and underdevelopment of muscles," said Perry. He pointed out that idea applies to everyone—not just athletes.

The Foundation for Athletic Research and Education’s main objective is to educate children about good health, according to Perry. He showed slides of cartoon programs he is trying to show on Saturday morning television.

Two of the programs Perry has completed are Paula Protein and King Cheese and Beany and Cecil Visit the Land of the Body Parts.

Paula Protein will take children on tours of history to show them how civilizations fell apart due to poor nutrition.

Land of the Body Parts will explain the workings of the body and its nutritional and exercise needs.

"I have happy, dancing sponges and livers with 'B's' and iron around them to subliminally teach them these organ’s requirements," Perry told the audience.

Perry concluded by stressing the need for conscious participation in health and the need for people to abandon the idea that each ailment has a magic pill to cure it.

The Tim Hughes Show

* Fridays 9-noon *

The Annual Audit for Fiscal Year 1979-80 for the Associated Students Inc., including the University Union and Child Care Center, have now been completed. Copies for public information are available in the ASI Business Office, UU202, the Student Officers Office, UU217A, and the campus library.

Calculators

...to success, to professional growth, and to career fulfillment.

You see, we’re the largest independent printer manufacturer in the world, and we can provide you with a career that offers much more than ordinary promises.

We intend to continue our bold growth in the coming years, and our policy of promotion from within offers you the opportunity of growing with us. We encourage you to exercise your own judgment and initiative, and to advance professionally at your own pace. New prof. enjoys Central Coast

BY DAVE BRACKNEY
Staff Writer

With the recent arrival of Dr. David Hatcher, Cal Poly has not only gained a new department head, but also fulfilled a man's long-standing dream to one day reside on the Central Coast.

Hatcher, the new head of the architectural engineering department, explained that his ambition to live and work in San Luis Obispo county dates back to his first visit here in the early 1960s, when he was a professor at San Jose State University.

"I thought the Central Coast would be a beautiful place to live," Hatcher said of his first visit here. Today, nearly 20 years later, he has changed his mind. To Hatcher, this area is still beautiful and has wonderful weather.

Hatcher came to Cal Poly after teaching civil engineering for 15 years at the University of St. Louis. He now lives in San Luis Obispo County.

"I am very happy to be here," Hatcher said. "I am aware of the architectural engineering department. I have heard that it is one of the best in the country."

Although he is aware of the Central Coast, he said it is too early for him to judge the quality of education at Cal Poly.

"My experience is in the city and I am not familiar with the rural areas," Hatcher said.

Hatcher is well acquainted with the architectural engineering department. He is currently short three faculty members.

Hatcher said the department will probably hire new faculty, but the lack of classroom space is a difficult problem. He explained that unless new facilities are built, the students accepted into the department would have to be reduced, and there isn't much room now.

Hatcher also said his department must soon come to grips with Cal Poly's new general education requirements. Twelve units of General Education must be added to the department's curriculum. "That requirement," Hatcher said, "will severely restrict our opportunity to be innovative in the program."

"It is a very long time to prepare for admission to the university." Hatcher is very impressed with his department's students. He called them "the best students we have in the department... very enthusiastic and given to working hard."

Arch program accredited

BY CREOLA MILLER
Staff Writer

The five-year bachelor's degree program in architecture at Cal Poly has been accredited for three years by the National Architectural Accrediting Board.

The department had asked for the accreditation back in 1983, but the accreditation was delayed. The department was then given the opportunity to visit the school and "to see the school in action." The school was then accredited by the NAAB.

The school was then given the opportunity to visit the school and "to see the school in action." The school was then accredited by the NAAB.

Speaker calls for simple designs

BY BEVERLY BRINTNALL

Buildings should be designed simply and economically, according to an award-winning designer and founding partner of one of southern California's leading architecture firms.

"Stay with basic materials, such as wood, brick and concrete," said James G. Pulliam of the Los Angeles architecture firm of Pulliam, Mathews and Associates. The designer made his comments at a gathering of Poly architecture buffs assembled for the first in the 1980-81 Distinguished Architecture Lecture Series on Tuesday, September 30. Pulliam spoke on the topic, "The Problems and Opportunities for a Small Architectural Practice."

During a slide presentation, Pulliam stressed simple, direct forms made with basic materials. Wood was used for a bank that supported a parking lot on the roof, for example.

Pulliam has been involved in several redevelopment projects in Los Angeles, including the San Pedro Historical Museum and a regional park with a man-made lake and gym developed on almost an hopeless, poorly-drained piece of county property.

"New problems of the time are the function of the architect...to provide a service and to be responsive to that service," he said.

Pulliam's firm has also been employed by ALOCA, Bank of America, Exxon, IBM, Tenneco and other business and industrial firms. Pulliam himself is president of the Southern California chapter of the American Institute of Architects.

Students work on revitalization project

BY KAREN GRAVES

Projects designed to revitalize a downtown area usually aren't completed in one weekend. But that didn't stop 14 Cal Poly architecture students.

These fifth year architecture students from the labs of Professors Charles Quinlan and Paul Nee spent Oct. 5-8 in Fresno working on plans to revitalize a downtown pedestrian mall.

The students were involved in a program called a Mini-R U D A T (Regional Urban Design Assistance Team) sponsored by the San Joaquin Chapter of the American Institute of Architects (AIA).

Students were given a tour of the mall area on Friday, worked on their designs in teams Saturday and presented them to the sponsors of the program on Sunday. Their designs will be submitted to the Fresno City Council for consideration.

The students were assisted by eight members of the Fresno AIA who had not yet received their licenses.

"Each team of five took a section of the mall and came up with ideas on how to revitalize it," said Melissa Bell, one of the students involved in the project.

The Fresno AIA set up the program in the hopes of getting someone from outside the area who had no preconceived ideas about the structures to work on the project.

"It was like a little section of practice and exposure in the real world," said Bell.

James Pulliam, of the Los Angeles architecture firm of Pulliam, Mathews and Associates, speaks about the advantages and disadvantages of a small architecture firm.
Flutist's perfect fusion of classical with rock

BY JIM MAYER

Backstage between shows, Weisberg casually dropped himself into a low chair. Blue shorts, an untucked T-shirt, bare feet, grape juice and Perrier.

The first show is already history, he said, thinking about the next. "We've got to make the next show even better, even bigger."

After a 90 minute performance of energetic rock instrumentation, flutist Tim Weisberg was still charged with excitement. Like a kid at Christmas, his boyish grin came easily and frequently.

Telling stories of playing volleyball on the sands of his Manhattan Beach home, like trips from San Francisco to Los Angeles and playing music on the road, the relaxed performer sunk his lanky body lower into the chair, his hair disarrayed, his mustache wiggled like cat whiskers as he talked.

"My mother is the only fan I know of that has all 13 of my albums," he quipped. The albums of the MCA recording artist, including the two released this year, have captured the unique blend he developed by fusing the classical sounds he was exposed to as a boy and the rock 'n roll he enjoyed while growing up in Southern California.

With Bank of America, you won't have to stay up nights worrying about your checking account. We offer several checking plans and a variety of banking services that make checking easier.

Check into our checking plans.

Select Checking is economical if you only write a few checks a month. With the Option Plan, the higher your balance, the less you pay in service charges. And with Initial Line Checking, if you qualify, you get a line of credit with your checking account.

And a way to qualify faster for a BankAmericard Visa credit card.

Study our services.

Our Money Convenience System includes: Monthly Timesaver Statements—an easy way to help balance your checkbook. Money Transfer Service—great if you're getting money from home. Extended banking hours at many of our branches. Free Consumer Information Reports—on everything from checkbook balancing to ways to finance your college education.

Best easy.

We have people ready to help with your banking needs. Come on over. Find out more about checking or any other banking problem that's been keeping you up late.

*If you're a full-time student of sophomore standing or higher attending college in California, you may qualify for Initial Line Checking. Freshmen may qualify in some cases. See us for details.

"We," he said. "That's how I got started playing the flute. In the seventh grade, beginning winds. By the time they got to Weisberg, the flute was all that was left."

But in a couple of weeks the flute was all, or almost all he thought of. Mentored by his instructor's talent, Weisberg said he forced himself to be good. "I was pretty stubborn, and I've always been a perfectionist."

"I was playing classical, but listening to rock 'n roll. I got jealous because my friends were playing in surfer bands, and I had to play for."

Weisberg downs more Perrier and grape juice. "I don't smoke or drink," he said as he looked into the paper cup.

"I guess it's my bad habit."

"We just played at BYU (Brigham Young University); I was the only one in the band that fit in."

Finally Weisberg got up the guts to sit in on a rock band. He liked the sound enough to put together his own band.

Musically, Weisberg considers himself unique. His suitcase is full of tapes: symphonic flutists and his favorite rock. To his listeners and his music is not a half of each, but a full incorporation of both.

Everything is an influence, he said, even his bike riding. But the impressions are subtle.

"I don't have a 'Highway One Song,'" he said dramatically. "But looking back I can see experiences reflected in my music."

Weisberg admits that because he is an instrumentalist, the relationship with his listeners is one of a kind.

"You can communicate without words—we just did it out there," he said with a confident smile. "Relaying on lyrics is not an assurance people will know what you mean."

His fans may not be getting the same feeling out of his music that he put into it, but they are getting something out of it, and that is more important, he said.

However, Weisberg has experimented with vocals. In one such effort, Twins Sons of Different Mothers, recorded with Dan Fogelberg, Weisberg gained both recognition and listeners.

"We did the album as an experiment. How the public perceives it doesn't bother me."

Out of Twins Sons of Different Mothers, Weisberg made several connections, one being a new manager, Irv Azoff. Azoff produces the Eagles, Fogelberg, Jimmy Buffett and several other musicians. Azoff also produces movies; his latest is "Urban Cowboy."

Weisberg's stage manager, Kevin Allison, ducked into the tiny room where the flutist was resting. Allison was tired. He'd been awake since Friday's show at San Francisco's Old Waldorf, and was already thinking about Sunday's gig in San Diego.

"The man that makes it all possible," Weisberg says in his introduction. The weary Allison responds, "Sometimes he's right."

Show time got closer, stage hands moved briskly, Weisberg sensed the hustle.

A crucial element of instrumental rock is energy, he said. "It's never been energetic live, but the energy never quite translated onto his albums. Party of One, his newest release, utilizes more of his band to make the album more electric. "I think we've come closer on this one," he adds.

Restored and refreshed, Weisberg hops from the chair, psyched for the next show, the previous one already forgotten.
You don’t need words to communicate

You don’t need words to communicate

Weisberg: short but sweet

BY JIM MAYER

The empty seats in Chumash Auditorium Saturday night were a sin. For the two performances of flutist Tim Weisberg could easily be one of the best shows ASI counterculture could produce.

His third stop at Cal Poly in as many years, Weisberg was not out to repeat a performance, but to create one.

From the first set of four consecutive instrumentals, taken mostly from his newest release, Weisberg left no doubt that what he wanted to play was loud, invigorating and rock.

Out of breath, Weisberg turned to the audience with a comical smile and said, "So much for the soft tunes." His four-member band burst into another composition that raised the flutist up, but never infringed on his dominance.

Swiching instruments from a collection of flutes, Weisberg supplied the audience with a variety of songs from his 13 albums. His fingers were agile, dancing on the keys. His shoulder length hair bounced in time as his head swayed, serenading both his flute and the audience.

The crowd nearly exploded at the end of each song, and Weisberg ate it up.

"We’ve taken a vote backstage and decided to take you all on the road," he told the crowd, and they agreed.

Several times during the show Weisberg bowed from the spotlight to listen to the band. Even these transitions were musically fluent as Weisberg himself casually stood to the side and took in the music. One solo by drummer Rick Jasger, who usually plays with Dave Mason, was an unexpected pleasure.

But after only eight songs, Weisberg left the stage. The audience had enjoyed the quality, but the quantity was something less than satisfactory.

During the 10-minute encore, Weisberg gave the audience something unavailable on any of his albums.

Plugging into an echo box, he gently licked the mouthpiece of his long, hooked, bass flute. The gentle notes, alone at first, filled the hall. But as the music returned via the electronic gadgetry, Weisberg wasn’t the only one on the stage. He shared it with himself, frequently stopping to listen to his own music he had created seconds before.

An unusual effect, but this too was short. After a total performance of not quite 90 minutes, Weisberg left the stage to get ready for the next show.

The concert was flawed, but not by Weisberg or his flute. Weisberg’s masterly performed solos, which depend on the essence of silence, were suffocated by an obtrusive humming of the amplifiers.

Electronics had both made and marred the performance.

From the first time Weisberg sauntered out onto the stage, the crowd of about 800 was engulfed.

But most of the audience, captured by the flutist’s casual and comical stage personality, didn’t seem to notice the noise.

"Hi Tim," a fan yelled before the introduction and Weisberg instantly responded with a high-pitched, spontaneous hello.

It’s sweet when this kind of entertainment is brought to Cal Poly. But the ASI concert committee may have also gotten a lesson on scheduling warm-up acts.

Comedian Alan Prophet, who inured, offended and embarrassed the audience for nearly a half hour before each performance, was inappropriate.

Prophet, billed as a punk comedian, would be better off if he stayed at the Playboy Club, where he bragged he has recently played. There he doesn’t have to worry about insulting anyone’s taste.
**Mustang soccer**

BY GUILLERMO BROCK
Sponsored by the Daily

The Mustang soccer team scored three early goals and coasted to a 3-1 win over Cal State Northridge on Saturday.

Brett Rosenthal gathered in a pass from Doug Shaw in the seventh minute and fired in a sliding shot from 18 yards to open the Poly scoring account.

Northridge almost tied the game in the 13th minute when a defensive bungle on a corner-kick allowed a Northridge player to take a snap shot, but it went wide. Poly was awarded a free kick when Jaime Suárez was in possession and rode a punishing tackle from which he emerged with the ball and had only one defender left to beat. The referee whistled for a free kick and the scoring opportunity seemed squandered.

Rich ten Bosch struck the free kick with characteristic precision and it curved around the Northridge defenseless wall into the net. The Cal Poly team could hardly believe its good luck in being 2-0 up on the team which head coach Wolfgang Gartner regarded as the biggest obstacle to a league championship.

The Mustangs wisely maintained the pressure and in the 14th minute it was Suárez again as he collected a John Becker pass and rounded the Chapman goalkeeper to slot the ball home from a narrow angle.

The score remained 3-0 until the last minutes of the first half when Northridge, a good close-control team, punished a Jeff Brown defensive error to catch their first goal of the evening.

The second half proved to be more of a wrestling match than a soccer game and ball control seemed to be of secondary importance. After 68 minutes right back Trevor Rodd played a casual backpass to Smith and stood transfixed as a Northridge forward seized upon the slow moving ball and forced a save from Smith.

In the final minutes of the game, the charismatic Suárez was ejected for a piece of rough play in which he was more the victim than the offender.

Midfielder John Becker was in outstanding form as he was deputized for Curtis Agney, who was sidelined with appendicitis. He was devastating both in his ball playing skills and his ability to make revealing passes, especially to Rosenthal.

The game ended with the score 3-1 in favor of the Mustangs and one of the best teams in the league decisively beaten.

Poly shatters jinx with Irvine triumph

BY BRIAN MILLER
Special to the Daily

Ayes, breaking a jinx is truly sweet feeling.

Until Friday night, Cal Poly had never won a women’s volleyball match from UC Irvine, and it took them three sets to do it, 15-12,11-15, 15-11.

"It was just a fine perfor- mance by the entire team," said coach Mike Wilton. Cal Poly rolled off the weekend by defeating the University of San Diego on Saturday night.

Cal Poly emerged Friday night as it had no in- tention of breaking the jinx. In the first game, Irv- ine jumped out to an 8-1 lead but the Mustangs rallied back to catch them at 15-14. The Mustangs went on to take the next three points and the game.

"The key to our com- eback was that we were passing better," said Wilton. "We weren't making our setter run over all the gym chalking boundaries."

Though Irvine did not win a game, it is well known that they are no push-over. Saturday night it took the Santa Barbara Gauchos five games to defeat Irvine. The Gauchos are second overall in the nation.

Wilton cited the efforts of Sandy Aushbaugh, Tina Taylor, Marie Lundie and her middle back, but had a special word for his middle-blockers, Sherri Walker and Charity Dillard. "I've really been on their case in practices," he said. "But it's starting to pay off. They have so much potential and now they're beginning to blossom."

Philosophically, the Mustangs were slug- gish at times in their match against the Univer- sity of San Diego on Saturday night, but came out on the winning end, 15-14,15-11.

With the two wins, the Mustangs now post a 14-4 overall record and are 7-0 in match play. They already have two more wins than their previous high for a season. In con- trast play the Mustangs are 2-0, which puts them in tie for the lead league.

Tomorrow night the Mustangs host the Bulldogs from Fresno State. In an earlier meeting this year CA Poly prevailed.

Wilton is looking for that for granting. They're a tough team and we expect to put on a good show.

BY ANDY BERGHER
Special to the Daily

At the prophet predicted, Cal Poly’s cross country team placed in the top three at the Invitational Saturday in San Diego. The Mustangs finished third in the stand- dings with 106 points.

UCLA, led by individual winner Steve Orsa, ran through the 10,000 meter course and won with 35 points. Arizona was a dis- tant second with 82, with Portland’s "A" team in close pursuit.

However, head coach Steve Miller entered two teams, and had the top five finishers regardless of team been totaled up, the Mustangs would have had 68 points and the second place trophy.

In any case, Poly’s "B" team finished fourth with 162 points, shadowed by Northern Arizona’s 163.

Individually, Terry Gibson ran a lifetime best of 30:58 and placed sixth in the field of 212 runners. Carmello Rios led a bar- rage of green jerseys across the finish line as Ross, Paul Medvin, Joe Fabris and Doug Avrit came in 19th through 22nd with a difference of but two

Conference Sports

Cross country splits Aztec effort

seconds. Kevin Jones and Jack Marden rounded out the top 10 with times of 31:07. Both Fabris and Jones ran on the "B" team, accounting for the fourth place team finish.

An indication of this year’s depth was shown by Poly’s first 11 runners broke 33 minutes, and each of them ran faster than the Mustangs fifth runner last year.

The Mustangs demolished all of the Division II teams that ran to San Diego, teams like Cal Poly Pomona, Northridge, Nevada-Las Vegas, and San Diego State.

Therefore, the third place finish at San Diego is miles in front of the third place received at Fresno one week ago. And, to a certain extent, it even surprised Miller.

"I didn’t think we’d have such a big turn around. We’re right on schedule of where I want to be, even a little ahead," he at- tributed the change to what he calls "a good prac- tice week, both physically and mentally."

This week, the Mustangs will travel to Palo Alto for the Stanford, Nevada Reno, and Division II rivals like Humboldt State and Sacramento State. Out of the best teams in the West will be there, and it will be Poly’s final test before their meet on Oct. 18.

But, according to Miller, the Mustangs are "heading in the right direc- tion."

Save our state

By Karyn Houston

A vote for John Anderson in November is a vote for the United States at a time when disgust and dismay at the state of the union threaten to crack the core of our country.

Why Anderson?

Let’s take a look at the key issue of energy and see where Anderson stands. His campaign is modeled on a firm foundation following a sane, well-organized platform which reflects innovation and promise.

Energy is the most important campaign issue. The way we resolve our current problems — such as dependence on foreign oil and the tried and true issues of nuclear power — will reflect back everywhere in our economy, foreign relations and at-home political attitudes.

Anderson advocates a conservation-oriented energy program to control our dependence on foreign oil. While Reagan would be content to blast our tooth away and ruin the environment in a never-ending search for oil, and Carter is happy to weakly flaut an energy policy, Anderson plans to make a strong move designed to rid us of our energy problems once and for all.

The Anderson-Lacey administration would “induce conservation of energy through policies that are equitable environmentally, environmentally and technologically sound.” Oil and gas prices would be decontrolled — a goal which is supported by all three candidates — and an excise tax of 50 cents per gallon on gasoline would be proposed.

Wait a minute. Fifty cents a gallon? Well, I’m going on my ski trip to Aspen this winter. Is 50 cents a fair tax? Wouldn’t poor people feel it more than the rich? Reason: we’ll get it back through Social Security benefits—a system which needs to be reformed anyhow — and most important, we’ll learn to practice conservation. We’ll see the income tax coming back to our pockets through reductions in payroll taxes and increased retirement benefits.

We are rarely asked, on a individual basis, our opinion on environmental issues. Here’s chance to show we care. Vote yes on Proposals 1 and 2.

Letters

No laughing matter

Editor:

I want you to know that I am greatly disturbed to see a full-page ad endorsing nuclear power in this school’s student newspaper. I can’t believe and still can’t believe that this was done, especially in an area where nuclear power is such a touchy subject. You have done a great disservice to me and many other students like myself who feel I do about this subject. You are creating a separation between students and what this school stands for. The Mustang Daily represents this school or it is nothing. Am I right?

I am totally, absolutely opposed to nuclear power in all senses of the term. I personally am not going to see nuclear power dominate my life or other innocent people who do not understand all the real dangers involved. This is not something to just take lightly.

I condemn people who support nuclear power that are trying to gain votes to their side, like some group is trying to do here. I fully realize that these people pay for these ads — the have the right to run them in your paper. But God, doesn’t the truth and mental health plus representation of students control the school?

If you are pro-nuke this will mean nothing to you. If you are anti-nuke you won’t have printed it. I think you are half-and-half indecision as you may call it, possibly leaning towards pro-nuke. Please, before you print it, I would like to know if this, find out if it is in the student’s interest. I know it is not in mine. It will never be the field of energy is my subject of study and has been for quite a while. I have seen the man major.

People have been greatly misled. It is the responsibility of the media to convey the public’s interest. If you continue this harassment you will hear loudly from me. I am willing to do a survey to get views of nuclear power input. Possibly if interest pervades we can see what the people in this school think about their future decisions. This is not a laughing matter.

Steve Jones
