Cal Poly has not been as successful in conserving energy as the California State University at San Luis Obispo, but this is because the facilities here are unique, according to the executive dean of facilities and plant operations.

Douglas Gerard reported Cal Poly has reduced its energy consumption in 1979-80 by 15.4 percent. The reduction rate for the CSUC is 16.7 percent.

"The reason for this is a little difficult to quantify," Gerard said.

The executive dean noted that 60 percent of the CSUC campuses have sizable areas that are air conditioned. This allows many campuses to conserve energy simply by turning thermostats up, he said.

"We don’t have that option here," said Gerard, referring to the non-air-conditioned buildings on campus.

He also noted that other campuses in the system have relatively few laboratories or factory buildings, like Cal Poly, where operating laboratory equipment requires more energy than using a lecture room.

Another reason for Cal Poly’s lagging record of conserving energy, he said, is the large number of students living in residence halls. The 2,733 on-campus residents represent almost 20 percent of Cal Poly students. The highest residence hall population of any CSUC university.

Gerard said that since the dorms are in operation continuously and year-round, there is a concern for much of the energy consumption.

Energy conservation within the CSUC is part of a long-term objective to reduce the amount of fuel, gas, oil and electrical energy consumed, he said. This is to be achieved by 1983-84.

Cal Poly has completed 21 percent of the CSUC’s energy conservation goal, the executive dean said.

The steam plant, located south of the Graphic Arts building, provides energy for heating, lighting and air conditioning to various locations around campus, the executive dean said.

The steam plant, which also heats the indoor and outdoor pools, heats and cools the campus by underfloor ventilation. There are four main lines, one in each direction of the compass, that radiate away from the plant.

The CSUC’s conservation effort as of June 30 represented $2.8 million in utility cost avoidance.

Gerard said Cal Poly has had to cut back on its energy consumption by putting fans on a limited schedule when buildings are occupied and by lowering the wattage of the air conditioning during high demand periods.

The co-generation project, costing between $2 and $4 million, will increase the efficiency of the university’s present steam plant generating plant, he said.

The steam plant, located south of the Graphic Arts building, now provides energy for heating, lighting and air conditioning to various locations around campus, the executive dean said.

The plant, which also heats the indoor and outdoor pools, heats and cools the campus by underfloor ventilation. There are four main lines, one in each direction of the compass, that radiate away from the plant.

A frequent complaint heard in the administration building, Graphic Arts, the old and new libraries, the administration building.

Gary R. Gerard, the assistant dean of parking and transportation, said that complaints are not uncommon. But, he added, "We are making an effort to improve the situation and to make the parking lot safer and more user-friendly."
**Female authors in line for Nobel**

STOCKHOLM, Sweden (AP)—The Swedish Academy of Letters today announced the Nobel Prize in literature today, and literary writers here said women authors are top contenders for the award.

The prize, considered by many as the world’s highest literary honor, was usually awarded last, after the Nobel prize for physics, chemistry and other sciences. The 18-member Academy forebore the tradition Wednesday by moving up the announcement date from Oct. 16 to Oct. 9 with only one day’s notice.

Several prizes, and ad interim candidates were D.

Los Angeles (AP)—Genetic engineering was used on humans for the first time, as far as is known, by a UCLA doctor who tried to cure a fatal inherited blood disease by adding a new gene to the living cells of two patients, university officials said Wednesday.

The historic and controversial procedure was carried out in Israel and Italy by Dr. Martin J. Cline. It was met with official concern that he was moving too quickly from the animal experiments that won scientific praise last April.

The results of the procedure were reportedly inconclusive. After three months there was no indication the new genes inserted into defective cells of the patients’ bone marrow, were producing normal blood cells.

Both patients were reported alive and doing well, although the treatment apparently had no effect on the disease, called beta thalassemia major.

Moped rule viewed as unfair in 300-person survey

BY BECKY MARR
Stall Writer

Just two students helped write a new moped rule which an overwhelming number of students interviewed felt is unfair to moped riders.

According to Doug Gerard, executive dean of facilities planning and a member of the Public Safety Advisory Committee, that decided the ordinance, both students on the committee favored banning mopeds from the campus interior streets. "A pedestrian would have a moped accident prompted all this. You know it only takes one such incident to stir everyone up," stated Gerard.

Agreed upon during summer quarter, the rule took effect the beginning of fall but won't be enforced the first three weeks of the quarter. "At this time we are placing warnings on mopeds taken into the campus," students at the registration requirement, explained participant Lennie Venter of Cal Poly's Public Safety Department. "Students should continue to register their mopeds. Registration is mandatory but free."

After the three week warning period, 82 citations will be issued to registered mopeds parked illegally. 85 citations to unregistered, illegally parked mopeds. Persistent illegal parking will result in a tow-away of any moped. Of the 300 moped and non-moped riders who filled out a planning Daily survey form, some felt the moped rule was fair in its application to illegal parking. Most felt moped riders were being treated unfairly. "As far as this rule is concerned," commented sophomore Andrew Poljak, "I really can't think of a reason for it."

"Bikes don't make any noise...You can't hear them coming up behind you," said student Linda Wiedemann. "Yeah, it's unfair. They might as well make it for everybody."

Many students use mopeds for the same reasons as bikes: transportation to get near classes. Dwayne Orss, a freshman who lives in Yosemite dormitory, said he may as well leave his moped behind if he is going to be required to park it on the edge of lots far from his classes.

Moped parking may be found in those areas allotted to motorcycles and in one area that isn't. Lots C-2 to C-1, G-1, H-2, H-4, R-1, and R-2 allow mopeds to park alongside motorcycles. Lot C-1 has recently been redesigned to allow mopeds.

Open Channel focuses on gas costs

Tune into Open Channel Thursday Oct. 9 at 6 p.m. and learn how to make your own auto fuel and convert it to your car. The guest is David Blume, an ecological biologist.

Blume has perfected the idea of turning agricultural waste into alcohol fuel. He can tell you how to make the fuel and convert the fuel to your car.

Open Channel is designed with the listener in mind. Therefore your calls and questions are encouraged. Join host Susan Mee and guest David Blume and learn how to make your own auto fuel.

New campus club appeals to woofer, tweeter buff

BY MICHAEL WRISLEY

Do you enjoy music? If your answer is "yes," then the Audio Engineering Society might interest you. Cal Poly's Audio Engineering Society is composed entirely of students, and is the only student-run chapter in the United States. The AES is open to all Cal Poly students, regardless of their major or class standing.

The next meeting of the society is at 7:30 p.m. October 17, in Room 247 of the Computer Science building. The club meets every other Wednesday, and encourages students who are interested in audio systems to attend. Entry into the society involves going to at least two consecutive meetings. There is no fee required to join the club.

AES activities range from building your own stereo, at half the cost of commercial components, to field trips exploring the Capitol Records facility in Santa Monica. The club also holds an audio demonstration each year at Poly Royal.

Benefits to club members encompass everything from buying blank cassettes at wholesale prices, to an equipment workshop to repair members' components. Items such as taking the sound specifications on your stereo, and an occasional check of your apartment, are all on the agenda for this quarter.

The new president, Eric Pariser, is enthusiastic about the year ahead. In an interview with Pariser, he conveyed his feelings toward opening up the club to people with an interest in any form of audio or stereo equipment. The club now has about 40 members.

The society publishes a newsletter called "Spindles." Three times a quarter, club activities are also posted on the club's bulletin board in the Engineering East building.

Pariser has some tips for students interested in purchasing stereo equipment. First, he advised to do some research on what you're looking for, and the amount of money you have to spend. Second, be wary of salespeople, and remember that the system you hear in the sound room will not sound the same in your apartment. For those on a low budget, Pariser recommends used equipment. Often the equipment is in good shape, and can be purchased at considerable savings. Pariser explained that a preference in music should affect the choice of components.

Pariser said that in the end you should cast the deciding vote in buying a stereo.

Panetta proposes legislation to halt population growth

BY BEVERLY BRINTNALL

A population growth program could be in the United States if a bill supported by the Zero Population Growth is before Congress. Senator Walter, an active member of the San Luis Obispo chapter for ZPG, said the bill, HR 3062, would establish the office of population policy to oversee a new federal policy of planning for changes in the population. It would attain a balance between the environment and human demands made upon it, said Walters.

Eighteen organizations, including the World Population Society, the National Wildlife Federation, and the American Public Health Association are supporting the bill, said Leon Panetta. "Carmel Valley is co-sponsoring the bill.

"More people need help," explained Walters. ZPG does not want people to stop having children, but rather to have fewer, she said. Walters explained that couples shouldn't have more than two children so that the United States population would level off by 2010.

"Each child would reduce a parent," she said. ZPG has two thrusts: educational and political.

The United States makes up five percent of the world population and uses 30 percent of the country's population. America consumes for food, energy and other resources because of the under-developed Third World, said Walters. Greater public education on population dynamics is needed, said Walters. Young people should be aware of the population problem. How many children they will have will determine how livable life is for those children.

"The more people the more air pollution, water pollution and land pollution," said Walters. ZPG was behind the movement to get abortions legalized, said Walters. ZPG is working towards a universal access to contraceptive sterilization and abortion information.

Immigration is another way a country's population grows, said Walters. ZPG favors reducing illegal immigration, said Walters. "Fewer children for a better future."

Correction

In our Wednesday, Oct. 2, edition, we incorrectly credited the American Cancer Society. We apologize. The front-page photographs of a blue whale were taken at Honda Point. The photographs were actually taken by Birg Hartwell of Hartwell Productions, Laguna Beach.
Soap addiction: a mental wash

BY LISA ASATO

Surrounded by brick walls and relaxing in big, overstuffed easy chairs, a group of fifteen students are oblivious to the world that passes by the large picture window of the Sequoia dormitory. Mesmerized by the huge television that looms above them, they are silent, except for a few uncontrollable outbursts of laughter, or snide remarks mumbled to themselves.

Ted Martin, a goody-goody, young and naive teenager, has just been dumped by his girlfriend. In order to try to get over her, he has asked a girl to get him some pot. Erika, both beautiful and pregnant, has been sneaking around her husband's back for the past few months in New York, trying to land a modeling job, while her unsuspecting husband thinks she is visiting her interior decorator, Ed Warner, who has been kept from marrying the woman he loves because of her jealous and possessive father, finds out on his wedding day that he has impregnated another woman.

FBI agents in charge of the Aug. 27 was "the largest investigation of the bomb, and have instructions on how to disarm the bomb, but attemp-ted to make a helicopter drop of the money failed.

Among these affec-tations, it appears that the favorite character is also the most hated: Erika, the luscious brunette, who is married to a gorgeous, kind, and hard-working husband, but who isn't satisfied to be a mere wife and mother.

Among the enthusiastic viewers sit a lone male, Tom Arnold, a 25-year-old Computer Science major, blames his addiction to All My Children on his girlfriend.

"I used to ask her how someone so intelligent as herself could watch such junk. Then I figured I can't sit there and watch alone. The next thing I knew, I was hooked."

When asked if he has any hang-ups or complexes about watching soap operas, he replies, "At first, I used to be afraid people might find out and think there was something wrong with me. Now I real-ly don't care what anyone thinks. I'm going to do whatever makes me happy, and if someone doesn't like it, that's just too bad.

Squeezing in one last comment before the last commercial, Arnold said, "I'm afraid when beings from other planets land on Earth and see us watching soap operas, they're going to report back to their leader that there was, indeed, no visible sign of intelligent life on the Planet Earth."

FBI says bombers were like a family

Stateline, Nev. (AP) - Who set off the bomb last Aug. 27 at Harvey's Resort Hotel casino on State Line Road? August was probably part of a group so close knit it was like a family, says the FBI agent in charge of the case.

Agent-in-charge Joe Yablonsky said he drew that conclusion after an of-fer of a $200,000 reward for information leading to the bombers turned up no takers.

"Under normal condi-tions a person would sell his mother down the river for $200,000, " he said. "This would produce somebody on the periphery of some group, probably Yablonsky said the

Outdoors
Energy crisis proves boon for bike tour business

By Bob Berger
Outdoors Editor

With the price of gas going through the roof and the ever decreasing availability of parking on campus, Poly students are turning to that pre-drivers license mode of transportation, the bicycle.

Not only is biking to school cheap—after the initial investment—but it also provides the avid biker with a new form of exploring and recreation: bike touring.

This weekend alone there will be two bike tours starting on campus. The ASI Outings club is sponsoring a day trip to Montana De Oro on Saturday, Oct. 11. The tour will start at the visitors parking lot by the Administration building at 8:30 am and should return around 3 pm. There will be a $2 charge, but bikers should bring their own sack lunch and drinks. The trip will be led by Helen Jones to Spooners Cove.

There will be another tour on Sunday, Oct. 12, leaving from the Main Gym at 1:00 pm headed for Morro Bay. Organized by several interested students, this trip will be a loose, informal tour.

If group tours aren't your thing, there are plenty of other trips to be found in SLO county. For beginning bikers there are several short-range tours. The Montana De Oro trip is an easy 35 mile round trip while the Morro Bay—Mugu Rock bike-hike is only 25 miles round trip.

For beach goers there is a 22 mile round trip tour to Avila Beach. The route follows lower Higuera south to Ontario Rd. to San Luis Bay Dr. and onto the beaches.

If one is looking for something a little longer, there is a trip out to Lopez Lake. Take Broad St. south to Riddle Rd. to Orcutt Rd. to Lopez Dr. to the Recreation Area gate. Admission is 50¢. The round trip is 45 miles and is rated as moderately difficult.

In the medium range there is a 72 mile round trip tour to Cambria and back. Route finding isn't too difficult. Follow Highway 1 north. For a good beginning overnighter, continue on to San Simeon for a 90 mile trip. The Cambria San Simeon trips aren't rated as difficult, just long.

For an extended overnighter through the rugged Big Sur along Highway 1 there is the Monterey—San Luis Obispo tour. The recommended agenda is to take Amtrak to Salinas and spend the night in a motel, or camp. On day two ride to Big Sur via Monterey, Pacific Grove and Carmel. And, on day three, make the big leg from Big Sur straight through to SLO for a 160 mile trip. Conditioning is highly recommended if not necessary, and one should have experience in overnight tours.

In order to make this biking adventure a pleasurable memory, one should take along a minimum of equipment. Five day touring, your equipment checklist should include a tire patch kit, a tire pump, a water bottle, a light, a helmet, and toe clips. On an overnighter, necessities include bicycle racks, panniers (saddlebags), a sleeping bag, tent (optional), and for added comfort, bike shoes and shorts.

Here are a few hints to ensure a safe trip:

- Don't trust cars. Take the least traveled roads.
- Watch out for loose dirt, gravel and sand.
- Watch out for grazing cattle, guard rails, railroad tracks and the like.
- Obey traffic laws as if you were in a car.
- Wear a helmet.
- Watch out for opening car doors and cars making right turns in front of you.
- Stay to the right as far as possible.

There are two bike clubs in town, the Cal Poly Wheelmen and the San Luis Obispo Bike club Inc. for those who want to rub elbows with fellow bikers. And, for help in planning a trip, or for inexpensive equipment rentals see the people in the Escape Route office from the El Corral Bookstore.

The U.S. Environmental Protection Agency today announced that EPA is seeking a total of $152,300 in penalties from a fleet of 30 gasoline retailers in the Monterey-San Luis Obispo tour. The route, or for inexpensive equipment rentals see the people in the Escape Route office from the El Corral Bookstore.

The Annual Audit for Fiscal Year 1979-80 for the Associated Students, Inc., including the University Union and Child Care Center, have now been completed. Copies for public information are available in the ASI Business Office, UU202, the Student Officers Office, UU217A, and the campus library.

This row of bikes on campus shows how tight rack-space is and the growing popularity of this type of transportation.

state of California for violations of Federal unleaded gasoline regulations.

Matson Terminals, Inc. of Oakland, was issued an administrative civil complaint assessing a penalty of $113,650 for allegedly introducing or allowing the introduction of leaded gasoline into company vehicles which were designed to use unleaded fuel and for not having the proper signs and labels in the pump stand area. This complaint followed an inspection by EPA inspectors from Denver.

Administrative complaints were also issued to Chevron, U.S.A., Inc. (56,100; Energy Carriers, Inc. of Placentia, Calif. (46,100), and Howard Dickerson's Chevron of Westmorland (1,460), for dispensing or offering for sale gasoline represented to be unleaded which contained lead in excess of EPA standards. Under EPA regulations a retailer is liable if contaminated unleaded gasoline is sold under the retailer's brand. In addition, complaints were issued against four retail gasoline outlets for equipping leaded gasoline pumps with undersized nozzles which allow leaded gasoline to be used in vehicles designed for unleaded fuel. The five retail outlets and the penalties assessed against each are as follows: Hall's Olympic of El Monte, $77,400; Elliott's Sav-On-Gas of Van Nuys, $6,000; & M Oil Co. of Montebello, $6,000; and Goodrich Oil Co. of Turlock $6,600.

Bicycle maintenance doesn’t require a wizard

BY KEITH HOWELL AND BOB BERGER

(Contrary to popular belief the bicycle is not a mysterious machine only the mechanical wizards can trouble shoot their wheels.) According to the Mechanical Engineering Major Keith Howell the bicycle is the most efficient form of transportation on the road. Howell teaches night classes on bicycle repair in the UJ Craft Center. All of his classes this quarter are full.

Not having the proper tools when working on a bike is no excuse since the Craft Center has all of the necessary equipment. In this article Howell explains, step by step, how general maintenance can save expensive repairs.

Brakes

Check the cables. If they are rusty or frayed they should be replaced right away. New brake cable cost less than a penny and most common problem with brakes is the proper tension.

To tighten your brakes properly you must adjust the tension so that the brake shoes fit squarely against the rim.

Squeeze the brakes against the rim and use a "third hand" (a C Clamp) will do to hold them in place.

Insert the brake-anchor bolts Take a pair of needle nose pliers and insert them into the brake sheath. Rotate the pliers so that the wire will wrap itself around the nose. Pull the wire out and tighten the anchor bolts. Lubricate all pivot points with an oil like WD-40. Be sure to lubricate the wire where it leaves the housing and the brake block.

The Chain

The single most important factor in caring for your chain is to keep it clean.

With a one or three speed bike simply find the master link and pry it off with a screwdriver. Ten-speeds have an "endless" chain. One will need a chain breaker to separate the links. Use the chain breaker to push the pin in the link through. He careful not to get the pin off otherwise you will have to replace it. Once the chain is removed soak it in kerosene. Use the chain breaker to separate the link. Use a tooth brush. Clean thoroughly by putting the chain on the big front sprocket and on any of the rear sprockets. Pull the front section of the chain over the sprocket, the chain more than 1/4, or if you can see the teeth of the sprocket, the chain is too loose and should have a few links removed. Wait until the kerosene has dried then use a special chain lube to oil it. Special chain lubes found in automotive supply stores or motorcycle repair shops are the best.

Cleaning (front and rear)

A clean chain won't do you any good if it is always being derailed.

The front derailleur can be adjusted in two ways:

First, check the derailleur position. It should be parallel to the chain wheel and should be clear of the big sprocket when shifting. The position can be adjusted by moving the derailleur up and down, or by rotating it on the seat tube.

Next, you must adjust the derailleur for chain travel. To adjust it for shifting the chain outward, place the chain on the large front sprocket and the smallest rear sprocket. The derailleur must be aligned with the chain and is adjusted by use of the small screws on it.

To adjust for inward travel (lifting down) set the chain on the small front sprocket and the large rear sprocket. Once again, line the derailleur up with the chain and adjust the screws found on it.

For the rear derailleur, line up with the smallest (fifth) gear and adjust it with one of the two small screws found on it. For the inward travel, line the derailleur up with the largest first gear and adjust the derailleur accordingly.

Check the cables to both derailleurs. If they're loose, tighten them like the brake cables.

Always keep your tires inflated to the proper pressure. They'll ride better and get less flats. It's wise to always keep the tires at the standard tube tire. They're the easiest to repair.

When you have a flat use tire irons (cost about 396 Santa Rosa Street, San Luis Obispo, CA 93401)

If you've been riding off of curbs and your stallion has wobbly wheels, they could need to be trued.

Tighten the left hand spoke and pull it slightly to the left and inward. If you tighten the left hand spoke and loosen the right, it will pull the rim to the left but not inward.

It's important to keep the spokes tight to keep the wheel strong. The size of the left hand spokes varies from country to country. When you buy a spoke wrench take your bike with you. The minimum tool re-

Rent problem raises question...

Student study finds SLO rents no. 1 in county

San Luis Obispo is the most expensive place in the county to rent and finding a place to rent here isn't any easier, according to a Cal Poly researcher.

The typical monthly rent for a one-bedroom apartment or house in San Luis Obispo is $275. That's according to a one-year study conducted by David Botts, a Poly junior-business major graduate currently enrolled in the School of Business' Master of Business Administration program.

The twenty-three-year-old Botts, who compiled his statistics from Aug. 1, 1979 to July 31, 1980, did the study of the county's rental housing market and found a

Please see page 11

Experts divided on what causes very high rents

High rents are caused by the federal government's imposition of such interest rates—about 15 percent—over planning and by speculation, depending on who you talk to.

Cal Poly economics professor Mike Johnson—a specialist in urban economics—says part of the blame is on the federal government. He says many prospective landlords and builders of new apartment units are often deterred from entering the rental market and from supplying housing because they're afraid they won't get a return on their investment—an investment which is formidable enough without high interest rates.

"High interest rates," he says, "can really chill a market. And with fewer new rentals being added to the supply of housing, the demand for older, already-occupied rent is increased.

The landlords of new units are in a tough spot today compared to landlords of old units. And says, unfortunately, landlords are forced to charge higher rents for them."

Please see page 11

Uncle Sam, assistance—are you qualified?

The federal department of housing and urban development gives out money through local housing authorities to families—including married students—who earn less than 80 percent of the median income of the city in which they live. That median income is different from city to city and is different depending on how many are in your family.

If you answered "true" four times, you are eligible for housing assistance. Believe it or not.

Answer true or false to this No. 2 pencil:

1. I am married.
2. I over 18 years old.
3. I am a student and don't know what
4. I have a spouse and are under 62 years of age.
5. I have a spouse and are less.
6. I am over 62 years old.

If you answered "true" four times, you are eligible for housing assistance.

Please see page 11

Author Joe Stein is a senior journalism major and Mustang Daily editorial assistant.
From page 10

... Where is the SLO housing? ...

From page 10

... the older units because of depreciation and increased demand. Johnson says the demand will persist in many cases because prospective landlords hold their time until interest rates come down.

San Luis Obispo senior planner Glenn Matteson thinks the unavailability of affordable housing is a major problem for those within and without the city. Matteson, however, feels helpless because he believes the problem is not confined to San Luis Obispo.

"It's the case throughout the country, particularly California." The shortage of rental housing in San Luis Obispo, however, is acute. The city has a vacancy rate of only two percent—and the rate of vacant dwellings which students can afford may be even less. Only 71 rental units were completed last year in San Luis Obispo, according to Matteson. He sees only about 20 units added to the supply of rental housing in all of 1980, or "maybe 25 or 30."

He blames high interest rates for the shortage of rental housing in San Luis Obispo. "There's always a surge of speculation on real estate during inflationary years. Unfortunately, he says, rental housing isn't as profitable to investors—or as an investment—as single-family homes.

San Luis Obispo mayor and realtor Lynn Cooper, however, says the city council and planning staff are partly to blame for the shortage of rentals. "They believe the majority of city residents don't want higher-density housing, nor are they willing to have city government make the zoning changes necessary to permit higher densities."

That students are victimized by the residents' preference for lower-densities is a coincidence, says Cooper, and cannot be interpreted as anti-student bias.

In addition, the majority of city residents have consistently demanded the city grow in population no more than two percent a year and are more concerned about the city's growth than its vacancy rate. In hopes of rechanneling this dilemma, Cooper offers one of his pet projects—a fraternity-sorority row on campus, complete with grocery stores and other conveniences. "You could have a whole community," he says.

Such a community has yet to get off the ground. However, "We've tried to work with the university," says Cooper, "and, of course, they're hampered by lack of funds. And we (the city) can't underwrite it.

"I was very hopeful about a year ago when (Cal Poly President) Baker came on board. But I don't see it right now as the top priority of the university. I'm not blaming the university totally. I think the city itself needs to be working maybe a little harder on it, also."

Botts and Classified Computer manager Tim Roodthaler said it was impossible to estimate how many landlords discriminate against students. Although a newspaper ad might expressly rule out student applications, a landlord could set his rents low enough to include married, non-student couples or families and discriminate indirectly against students. Botts said his research was not sophisticated enough to delve into the motivations of landlords, or into the attitudes of landlords toward students.

According to Botts, the best time to look for an apartment is late May or early June, but rents everywhere are going up rapidly. For example, more than 95 percent of all one-bedroom apartments, in San Luis Obispo could be rented for less than $100 in 1975, according to a special federal census conducted in that year. That's about 75 percent of what one-bedroom apartments in San Luis Obispo are renting for now.
The Cal Poly volleyball team prepares for their upcoming season.

**BY VERN AMENDES**

Sports Editor

This weekend could prove to be the turning point for the Cal Poly women's volleyball season.

Cal Poly faces two tough teams as Pomona pays a visit to the Cal Poly Max Myn Gym on Friday at 7:30 p.m. and Los Angeles State takes on the Mustangs Saturday at 7:30 p.m.

"Pomona is good but I know nothing about Los Angeles State," said volleyball coach Mike Wilton. "L.A. State has a new coach but I do not want to treat anyone lightly this year."

Wilton still fears the Mustangs two tough teams as Pomona pays a visit to the Cal Poly Max Myn Gym on Friday at 7:30 p.m. and Los Angeles State takes on the Mustangs Saturday at 7:30 p.m.

The Cal Poly Mustangs' cross-country teams will put their top ten rankings on the line as they travel to Palo Alto on Friday for the Stanford Invitational.

The meet will be the last look into Division I challenge for both the men's and women's teams until the NCAA Division I Championships in late November.

"This meet will be the last big moment for us against the high caliber teams," said men's coach Steve Miller. "This meet also gives us a chance to see how well we stand against those teams."

The Stanford meet, scheduled for Saturday morning at the Stanford Gold Course, will draw Division I foes UCLA, Reno and host Stanford in the men's competition and Division II challengers Riverside, Humboldt and Sacramento State. This week Cal Poly was rated as the top men's Division II team in the nation, Hubbard and St. Mary's was second, Sac State third and Riverside fourth.

The women's team is expected to solidly land in the national top ten rankings following two back-to-back national performances. Women's coach, Lance Hart, is expecting trouble from Stanford. Cal State Hayward, Sac State and the strong running club the San Jose Cindersgals.

"We are going to turn Eileen Krammer loose this week and let her make contact with the leaders," Hart said. "We are emphasizing the unity of our four, five and six runners as we want them to jell as a pack."

Hart will send his B team to Santa Maria to run in the Hancock Invitational on Saturday.

Doctors cannot find drug signs in fighter

LAS VEGAS (AP)-Muhammad Ali, who claims an overdose of a thyroid medicine left him "physically unfit" for last week's heavyweight title bout with Larry Holmes, did not show characteristic signs associated with the drug, the fight's ringside physician said Wednesday.

Ali said that medication he took for a thyroid condition weakened him to the point that "I couldn't pick up my legs" while jogging three days before the fight. Ringside physician Dr. Donald Romeo said Ali's reaction to an overdose of Thyrolar was not characteristic.

An overdose of Thyrolar tends to make a person overly nervous, overly anxious and overly excited," Romeo said.

Kansas City, Mo. (AP)-Yankee-killer Larry Gura survived consecutive record-setting home runs in the second inning and Frank White, Willie Aikens and Wilson Wilson delivered two-run hits Wednesday, leading the Kansas City Royals to a 7-2 victory over New York in the opening game of the best-of-five American League Championship Series.

Gura, an ex-Yankee who has won his last seven regular-season decisions from his old club but was one-list against them in playoff action, settled down after surrendering a double in each of the first three innings, as well as home runs by Rick Cerone and Lou Piniella with one out in the second inning. It was the first time consecutive home runs had been hit in AL playoff history.

The veteran left-hander, noted his first victory since Aug. 25 by checking the Yankees on five singles after the third inning.

The Royals pounded New York's Ron Guidry for four runs on five hits and four walks in the fourth and fifth games, if necessary, Saturday and Sunday in Yankee Stadium.

The Royals Stadium crowd of 42,598 was the largest in Kansas City's baseball history.

In the 11 previous AL playoffs, the winner of the first game has gone on to win the Series eight times. In losing the 1976, 1977 and 1978 playoffs to the Yankees, Kansas City took the opener only in 1971.

SOPHOMORES/JUNIORS: GUARANTEED PILOT TRAINING

Apply for an aviation position with the Navy right now, and you'll be guaranteed flight training upon graduation. We have no obligation to the Navy until you complete the Initial phase of training and obtain your commission.

Our entry-level package, excellent benefits package, extensive pay grade. Totals $14,000 in tuition and fees each year. For information, call toll-free, collect from 8 a.m. to 5 p.m. weekdays, 30 days' notice, rapid promotion.

See our representative on campus Oct. 14, 15 and 16 in Science North Bldg., Rm. 210A for testing and interview viewing on those dates, between 8 a.m. and 5 p.m.

These two TI calculators can help you handle courses in math, in science, or business. Now, and in the real world.

One real-world lesson you'll learn in school is the importance of productivity. Time you spend learning the math part of the problem is time you can't spend learning more about it.

A Texas Instruments' professional calculator will help make your study time more productive. And data, if programmed into it, can help you move into the world of a professional. A world where knowing the concept is only part of the solution. Bringing out the answer requires a working knowledge of a powerful personal calculator.

Texas Instruments technology — bringing affordable electronics to your fingertips.

U.S., keep out!

Despite hopeful indications that the two-week-old war between Iran and Iraq would end this past weekend, the drama continues. Both characters still play the villains and new twists are added to the plot.

But one complication that should not be added to the already complex plot would be to have the United States enter from the wings a supporting character.

Though President Carter has "unequivocally affirmed" the country's neutral stance on the Iranian-Iraq war, there appear to be some top Pentagon officials content to drag this nation into another Viet Nam to protect the United State's Middle East interests.

Foremost on the list of "interests" the Pentagon believes this nation must protect, even if it leads to bloody war, is the rich oil reserves sitting on the Persian Gulf. But despite all the clamoring of the importance of Iranian oil to the United States, this country only imports about 4 percent of its oil from that country. Iran is also not a major oil producer for the United States, at least when compared to Saudi Arabia and Nigeria.

The only way the United States could be crushed under the weight of reduced oil flow is if the war spilled over to Saudi Arabia and other Arab nations. But Carter has muted the possibility of the Iran-Iraq war extending into Saudi Arabia by selling to that country four Airborne Warning and Control Systems aircraft to greatly bolster its air defense capabilities.

It has also been hypothesized that should the United States offer weapon or troop aid to Iran, this country would have a bargaining device, a wedge to drive into the stalled hostage negotiations. But the Pentagon forgets to consider the pride of the Iranian people. The U.S. government has been condemned as an instrument of the devil for aiding the shah in grabbing the reins of power from Mohammad Mossadeq in 1953 and continuing to support the shah since then. No offer of military assistance, no matter how tempting, would be accepted from a country which holds such animosity toward the United States.

Nor should the United States send troops in exchange for the hostages, even in the unlikely chance of Iran agreeing to such a deal. In this instance the 52 American hostages are being treated like symbols, not 52 individuals. President Carter must continue to work diligently to secure the hostages' release, but hundreds or thousands of lives should not be risked to do this.

Some have been deluded into believing that if the United States entered the war, it could perhaps overthwart the Khomeinist government. Hasn't the lesson of Viet Nam stayed with us? The Viet Nam debacle should have taught us that it is futile to try to impose an unwanted government on any nation. The Iranian people support Khomeini, and no U.S. military coup would change that.

The United States must stay out of the Iranian-Iraqi conflict and we commend President Carter for taking a neutral stance. But the energy presently used to fuel the rumors of this slaughter, but hundreds or thousands of lives should not be risked to do this.
