increase in enrollment surprises administrators

BY MIKE CARROLL
Staff Writer

The 1980 presidential election has ignoted the death of the traditional Democratic coalition and the emergence of an increasingly independent-minded electorate, but a political realignment toward the Republican Party is not in the making.

That was the verdict handed down by Cal Poly political science professor Richard Ellings and Dave George during Monday's seminar "Reflections on the 1980 Election."

"I'd say the (Democratic) coalition is dead," Ellings said to an audience of 30 faculty members in the faculty office building.

George said there was no evidence the American electorate was going through an ideological shift to the right.

Both political science professors have conducted research and public opinion surveys on electoral behavior in the United States. Ellings noted the Democratic coalition—make up of southerners, organized labor, Catholics, blacks, farmers and Jews—has shown "longstanding" signs of disintegration.

The 1976 election, he said, was evidence of a weakening Democratic party base. Even after such Republican setbacks as Watergate, the Vietnam War, unemployment and former President Ford's performance in the debates, Ellings noted Carter could outdistance Ford by only 2 percent of the popular vote.

Even so, Ellings does not foresee a significant shift of the electorate to the Republicans because of the declining role of the major political parties in general and the increasing number of independents.

Ellings said a political realignment requires a change in the socioeconomic status of the electorate, a dissatisfaction of the major political parties in general and "zero-based bargaining."—that is, it would be considered the primary concern of the electorate.

Planning the emergency procedures to be taken in case of a major earthquake here is a "very difficult task," according to Richard Brug, Cal Poly's public safety director. Brug and Don Van Acker, environmental health and safety officer, are working in conjunction with city and county agencies on these emergency plans.

"Any kind of large earthquake brings into the process (of emergency procedures) things you just don't anticipate," said Van Acker, who is also the chairman of the University Disaster Preparedness Committee.

Brug said he feels Cal Poly is better prepared for an earthquake than it has been in the past. But, he said, "they're not really making any effort to hold down the return rate."

Administrators are also obligated to CSUC administrators to keep full-time equivalent enrollment (the aggregate number of course units at Cal Poly divided by 15) at 14,200 students—whichever is fewer.

The figure was a small surprise to city planners who had hoped in the mid-1970's to have enrollment held at 15,000 students. They later bargained with Poly administrators for 16,000. The current figure "probably doesn't mean much" in terms of numbers, according to senior planner Glenn Matterson. But, he says, "they're not really making any effort to hold down the return rate."

Cal Poly's enrollment barely budged this year from last year but surprised administrators who predicted enrollment would drop.

There were 16,045 students on campus this quarter—an increase from fall quarter 1979 of 71, according to Cal Poly's director of institutional research, L.H. Dunigan.

In addition, administrators said they had predicted "several hundred" fewer students but was surprised by an unexpectedly large number of continuing students.

Campus administrators refused admission to 5,500 qualified applicants, who were redirected to other institutions or advised of other educational alternatives. According to Dunigan, however, administrators don't have control over the number of continuing students and never know for sure exactly how many students continue from one quarter to the next. The enrollment figures are important to administrators because they are obligated to San Luis Obispo city officials and to California State University and College administrators to keep enrollment to 16,000 people on campus or to 16,000 full-time-equivalent students—whichever is fewer.

City braces for Kian-Nazi verdict
GREENSBORO, N.C. (AP) - Police increased security Tuesday in preparation for a verdict in the Kian-Kian
Nazi murder trial, as deliberating jurors re-examined in
minute detail a videotape of events leading to the
shooting deaths of five infants.
Six Klanmen and Nazi are charged with first-degree
murder and felonious robbing the five of Commu
nist Workers Party members at a "Death to the Klan"
ra1ly on Nov. 3, 1979.
Jurors got the case Friday and deliberated a full day
Monday without reaching a verdict. The trial, in its 22nd
week, is the longest in state history.
City officials, who have mounted tight security for
the entire trial, said they were taking increased precautions.

Health care funds run short
WASHINGTON (AP) - Congress voted Monday to pass a bill
authorizing $480 million in Medicaid funds, $30 million
short of the amount President Carter sought.
Sena or Democratic leaders said the final $45 million
shortfall was due to the withholding of funds for the
National Institutes of Health.

Costs for MX missile system rise
WASHINGTON (AP) - The cost of the MX missile system pro
posed by the stiff opposition in Utah and Nevada, the
shaky ground due to spiraling costs and
the government to the executi
branch.

An overhaul for the MX mission?
SALT LAKE CITY - Already on
shaky ground due to spiraling costs and
stiff opposition in Utah and Nevada, the
MX missile system proposed by the
outgoing Carter administration appears
headed for an overhaul by the incoming
Ronald Reagan and his advisers.

"I'm not going to be tied to it," said
William P. Clements, the Tennessee
Republican slated to be the
majority leader, he hopes to
"change the nature of the Senate, " concentrating its at
powers on policymaking and oversight of government
functions and leaving the day-to-day administration of
"government to the executive branch.

Deer feast on student’s gladiolus crop

BY MICHAEL WRLSEY

A crop of Gladiolus flowers potentially worth more than $6,000 was destroyed early this quarter by a herd of about 15 cute, but ravenous, antlers with antlers that reside in the hills behind Cal Poly. The animals are commonly known as deer—the devastated gladioli crop is known as a loss of many hours and dollars to Dennis Levine, an ornamental horticulture major. The gladioli were the third enterprise project Levine has undertaken in the last few years. Enterprise projects consist of students having their plans approved by an advisor; the university then provides the funds and the student the labor.

There’s long been a deer problem on campus. Levine, but the administration doesn’t want to admit it. Levine’s project is not the first to be affected by the deer, but since the animals are on the hills behind Cal Poly, Levine said he had deer problems in his second project of 22,000 corms (garden bulbs), despite an eight foot fence. “I used to take the little electric cart from the OH unit out at night and watch the deer walk right up to the fence and just hop right over it. I could be two feet away, almost reach out and touch them, yet I couldn’t do anything,” Levine said, with a sigh of relief. If a loss is incurred in the course of the project, the school absorbs it.

“Enterprise projects are set up really well” said Levine, “we’re like a no risk adventure.” Enterprise projects are common in other majors such as Architecture and Agriculture.

Levine, realizing if something was not done soon he would lose all 22,000 gladioli to the deer, became desperate. After trying every deer repellent on the market, Levine went to the cages at Madonna lim for some lion urine and manure. These remedies didn’t work, Levine explained, since the deer had never been introduced to a mountain lion or similar cat.

At this point, frustrated, Levine altered his strategy. “I decided to try and make what the deer were eating taste as bad as possible,” he said.

Levine spent $150 on a mixture of 100 gallons of water, four pounds of powdered garlic, and four pounds of ground cayenne pepper. To this Levine added X-77, a compound which thins the mixture and makes it stick to the plants.

The solution worked, and saved the crop of 22,000 bulbs. Levine’s first project was done off campus at Shevchenko near the California Coast. The 3,800 corms planted there were unaffected by deer, Levine said.

The Gladioli were gathered in bunches of ten and sold to wholesalers in Carpenteira, Salinas, and Lompoc. A bunch of ten sold for $2 wholesale and $2.50 retail. Levine knew that between October and December the price for a bunch of ten gladioli went up to $3.80, sometimes as high as $4.50. Prompted by this, Levine said he decided to plant 30,000 corms in June, in the same area behind the Poly Plant Shop. The crop was due to flower in late September.

On September 20, Levine said he spent eight hours spraying the gladioli with his garlic and cayenne pepper special mix, just as the plants were beginning to flower; but the mixture worked for only a couple of days. The deer had learned to wait until the tips grew above the first growth, then they would eat all the buds. Levine said.

Since Levine couldn’t possibly spray every two or three days, 30,000 gladioli had to be thrown out at a $300 dollar loss. Levine knew that between October and December the price for a bunch of ten gladioli went up to $3.80, sometimes as high as $4.50. MEChA to celebrate

MEChA will present a festival beginning tomorrow at 6:30 p.m. celebrating the 70th anniversary of the Mexican Revolution and the overthrow of Porfirio Diaz. The Comemorativo la Revolucion Mexicana will be in Chumash Auditorium and will include a theater group, Mexican folkdances and music provided by a local marimba band. Tickets are $2 for the public and $1.50 for students. They are on sale at Cuesta College, Hancock College, Santa Maria High School, Righetti High School, the ticket desk of the University Union, and the Cal Poly Educational Opportunity Program Office. They will also be available at the door the evening of the performance.

MEChA has arranged for Teatro Estudiantil de Santa Maria (Student Theater of Santa Maria) to perform the play, El Chuco in both Spanish and English. The Righetti Marimba Band will perform Latin music on traditional percussion instruments, and Folklorico Los Robles, a children's dance troupe, will perform traditional Mexican dances.

Refreshments will be served during the event in the intermission. A nominal donation will be requested.

Nov. 20, 1910, is a date central to Mexican history. Following the Plan of San Luis, authored by Francisco Madero, which constituted a call to arms against the oppression of Diaz, several Mexican states began a serious round of insurrection. Armies led by Pancho Villa fought in one part of Mexico, while Emiliano Zapata led forces elsewhere. Eventually, Diaz was deposed, and a number of constitutions were written until adoption created the seeds for today's participatory democracy.

MEChA is one of a number of cultural interest organizations affiliated with the Cultural Advisory Committee of Cal Poly's Associated Students Inc.

Dietetics
Shelley Marks will speak on the WIC program at tomorrow night's 7:30 meeting of the Dietetics Club in the Home-Ec dining room. Info: Marianne Frew, 541-6252.

Float Display
Poly's rose float will be on display in the U.U. plaza all day Friday. Roses will be on sale. Info: Jackie Loper, 543-7864.

**Earthquake safety tips**

1. **Remain calm.** Try to calm and reassure others.
2. **STAY IN THE BUILDING.** Take shelter under desks, tables, doorways, and similar places. Do not run to an exit. Stairways may be broken and jammed with people.
3. **Keep away from overhead fixtures, windows, bookcases, filing cabinets, and hazardous materials, etc.**
4. **After the shaking has stopped, walk quickly outside to a clear area.**
5. **If outside, avoid high buildings, walls, power poles, and other objects which could fall. Move rapidly but cautiously to an open area away from overhead hazards.**

**SLO faces major quake**

BY RALPH THOMAS

Northern California was rocked Saturday by a strong earthquake, but luckily there was no serious injury or damage. What would be the consequences if such an embler (7.1) on the Richter scale were to strike the Central Coast; more specifically here at Cal Poly?

There's some good news and there's some bad news.

First the good-news: according to David Chipping, a physics instructor who teaches a class on earthquake at Cal Poly, the San Luis Obispo area is mostly on solid rock. The advantages of an earthquake would be sharper, causing less damage.

The bad news is the much talked about threat of a major quake being stored because of tension on major fault lines. Chipping said we are in a "high risk" zone of the San Andreas Fault. He said the average time interval between large quakes on the San Andreas is 160 years. The "last biggie" was in 1857.

"I wouldn't throw my arms in the air and say 'a big one is coming,'" said Chipping, but he did admit there is "some chance" of a major quake.

Chipping said a 7.0 magnitude quake on the San Andreas Fault with its epicenter in San Luis Obispo County would cause some damage. But a temblor of the same magnitude on a local fault, such as the Hosgri, would produce "quite severe" damage. A quake of 8.0 magnitude, he warned, would surely cause "major destruction."

President’s path asphalted over

If you’ve strolled past President Warren Baker’s house lately, you may have noticed the dirt trail winding through the evergreen of the grounds has been covered with asphalt.

The trail was surfaced following several complaints from students according to university director of plant operations Ed Naretto. He said students complained that the trail got soft and muddy following rains. Surfacing of the path began about three weeks ago.

Naretto said an accurate estimate of the cost of surfacing the trail can’t be made because operations officials haven’t included the cost of labor—equipment operators, grounds people, maintenance and students. Materials, however, were $500, said Naretto.

A Poly student ambles up the asphalt path leading past the president’s house—a path that was once dirt.

House committee passes spending bill

WASHINGTON (AP)—The House Budget Committee ignored Republican protests Tuesday and passed a binding federal budget ceiling that would obligate President-elect Ronald Reagan to cut federal spending by 2 percent.

The resolution, which would affect all federal spending except that for defense, was sent to the full House for a vote during the lame-duck session that begins Wednesday.

Democrats answered criticism by saying they were just giving the incoming president an opportunity to fulfill campaign pledges.

"Mr. Reagan has said that a 2 percent cut can be made in 1981 solely through the elimination of—and I quote—waste, extravagance, abuse and outright fraud," said Rep. Robert N. Giaimo, D-Conn., the committee chairman who offered the plan.

"The 2 percent cut was added to a resolution setting a binding federal budget ceiling for fiscal 1981. Reagan would have to decide how to make the cuts after he takes office in January.

Committee Republicans refused to participate in the 14-0 vote approving the cut. Rep. Delbert L. Latta of Ohio, the ranking Republican on the committee, voted "present."

There then was a 14-8 party-line vote approving the full measure. Latta said it was "just unfair... to rush this through."

Before the vote, Senate Republican Leader Howard Baker of Tennessee said Giaimo "is playing political games with us" in pushing the spending cut before Reagan takes office Jan. 20.

... It's up to the Reagan administration to take their first fair shot at it, not to Giaimo or any other democrat." Baker said. "It is Reagan's turn at bat; the country gave him that."

Baker was interviewed on the ABC TV program "Good Morning America."

In an opening statement to his panel, Giaimo countered: "I am not attempting to sandbag the new president."

"Mr. Reagan has said that he can make such a 2 percent cut without harming the American people," Giaimo added. "That will not be simple to do, but it is a challenge that the president-elect has posed for himself. We should give him the opportunity to meet that challenge."

Fiscal 1981 began Oct. 1, but Congress, bogged down in election-year politics, has not approved a binding budget resolution, as required by its rules. The 1974 Budget Act calls for congressional passage of the binding budget resolution by mid-September.

A draft of the budget resolution drawn up by the committee staff called for a $648.7 billion budget with a deficit of $38.4 billion. The plan approved by the committee would reduce spending to $631.7 billion leaving a deficit of $25 billion.

ATTENTION: DIABETIC PATIENTS!

On November 14th from 10:30 A.M. to 3:00 P.M. we will have Marsha Gates, RN. Consumer Products Representative for the Monoject Corporation with us to demonstrate the Monoject Insulin Syringes. We invite you to come and meet Marsha and have her show you this remarkable syringe.

During this time period from 10:30 A.M. to 3:00 P.M., November 14th AND THIS TIME ONLY, we offer you the best prices on Monoject Syringes in the U.S.A.!!! So even if your box of syringes is not yet empty our price during this demonstration may be so tempting that you may wish to restock early!!

Nuclear Energy Forum

Scientists and Engineers for Secure Energy (SEF) has invited distinguished scientists to present their views on nuclear energy. No personal fee or payment of any kind has been made to individuals expressing their opinions here. The views expressed are those of the scientists. Pacific Gas and Electric Company, as a contributor to Scientists and Engineers for Secure Energy, is sponsoring this ad.

DR. EUGENE WIGNER ON NUCLEAR SAFETY.

"Nuclear plants have the best safety record of any major technology in America."

Eugene P. Wigner
Emeritus Professor of Physics
Princeton University
Nobel Laureate

Dr. Wigner's scientific contributions have dealt with atomic, and nuclear physics, and have earned him numerous citations, including the Nobel Prize for Physics, the Albert Einstein Award, the Atomic Scientists Group National Security Award, and 23 honorary degrees from universities worldwide.

Eugene P. Wigner: Founded in 1976, Scientists and Engineers for Secure Energy is a society concerned about the integrity, current and future directions of energy policies. It was created to counter a movement among certain self-aggrandizing groups to spread the idea that nuclear energy is too dangerous for any use.

Forbes Magazine included SEF in "Who's Who in America," and the group's direct mail program has been widely lauded for its quality and effectiveness.

Nuclear plants have been producing commercial electricity for more than twenty years. In all that time there has not been a single nuclear-related death or injury to any member of the public or plant workers.

In the past ten years more than 450,000 Americans have been killed on our highways. Nearly 2,000 have died in coal accidents, 2,700 perished in plane crashes. Yet, no one is demanding a stop to these activities. They are part of the risks we assume in our lifestyle. In the face of nuclear's safety record, it simply doesn't make sense that certain groups ask for a stop to nuclear power.

"Nuclear plants have always been designed with safety as the top priority. The fact that no major industry anywhere can boast a better safety record is proof of the nuclear industry's dedication to safety."

"Even the highly publicized Three Mile Island accident—an event viewed very seriously by the nuclear industry—did not cause a single death or injury. This even though several errors were committed—errors which in the future will certainly be prevented."

"No technology is 100% safe. But the elimination of technology would cause very much more harm than its maintenance. This also applies very much to nuclear energy's technology."

"Nuclear energy is a source we desperately need. Without it our dependence on foreign oil would be greater than it is now and energy costs would be even higher."

Forbes Magazine included SEF in "Who's Who in America," and the group's direct mail program has been widely lauded for its quality and effectiveness.

Nuclear energy has kept the lights on in much of the country during coal strikes, oil embargoes, and natural gas shortages. The society does not argue that technologies, including nuclear energy, are free of faults. It also encourages frank and vigorous debates in search of better understanding. The society hopes this series of statements will contribute to the understanding that nuclear energy has the potential to bring enormous benefits to America and the world, if it is used with the wisdom and safety required for progress in the tumultuous years ahead.
Government internships are quite an experience

BY LISA ASATO
Stall Writer

Three Cal Poly students fond of political science are having eye-opening experiences with government officials.

Cal Poly junior Carrie White is one student who benefited from her participation in the political science department's Sacramento Semester Program. "I was tired of the classroom. I wanted to get involved in a practical experience without leaving school." White is interning with California senate minority floor leader William P. Campbell of Whittier. He helps the senator by answering letters, reviewing his unsuccessful legislation, by answering phones and by performing other tasks. She also sits in on hearings and press conferences, takes tours and helps Campbell design future bills.

For this work, she receives 15 semester units. But she recognizes other benefits. "I'll be able to relate this experience to my future. People I've met, some influential, have shown how things really get done. I'm sure some of these people will be able to help me later."

In order to apply for the program, White completed lots of paperwork. She said there weren't many people who applied because of the inconvenience of relocating in Sacramento for a semester.

White will be returning to Cal Poly for winter quarter. Although she would like to return to Sacramento for more interning, she would prefer to be paid in the future. But, she said, "It's quite an experience to see how government works and all the various aspects involved."

Political science majors need not go all the way to Sacramento to intern. There is a local internship program administered by the political science department at Cal Poly.

According to Dr. George Clucas, head of the political science department, the program at Poly has existed for eleven years, and the feedback has been positive. Clucas said the purpose of the program is to give political science students an opportunity to work in various branches of local government. The students receive four units per quarter for three and a half days of work per week.

Clucas added the experience looks good on resumes and on graduate admission forms. He said prospective employers usually call a student's intern supervisor before their major advisor because the intern supervisor generally knows the student better and what he can do.

John Larrick, a senior political science major, is interning for the city administrator in Arroyo Grande. He does any projects the City Administrator directs him to, most of which is research and reporting.

"I think everybody should participate in interning. It's given me confidence in knowing I could do what I was going to school for. It will open up job opportunities for me."

Deanna Wheaton, also a senior political science major, is interning for the city administrator in Arroyo Grande. She does any projects the City Administrator directs her to, most of which is research and reporting.

"I think everybody should participate in internships. It's given me confidence in knowing I could do what I was going to school for. It will open up job opportunities for me."

Her current pet project is a surplus sale auction which will take place on November 22. This is the second time she has managed the sale, and said this time there will have "a lot of good stuff." Much of the merchandise is stolen or abandoned items which are held by the Police Department.

Wheaton has used her work at the city administrator's office as a special problems class, and will do her senior project based on her internship.

"I think everybody should participate in internships. It's given me confidence in knowing I could do what I was going to school for. It will open up job opportunities for me."

Students who are interested in participating in the Sacramento Semester Program or Cal Poly internships should contact Dr. Clucas in the political science department. Applications for the Sacramento Semester Program are due November 26, 1980.

The Navy Officer Qualification Test (NOOT) is a piece of cake, right?

Q. The Navy Officer Qualification Test (NOOT) is a piece of cake, right?

A. Not necessarily.

If you're majoring in engineering or another technical area, we would expect you to do better on the test than an average Montana Cultural Arts major, but you'd better not tell us telling someone that the test is easy. The NOOT is an aptitude test dealing with number and letter parison, instrument interpretation, word analogy, physical judgement, mathematical reasoning, mechanical comprehension involving gears, pumps, fluids, etc. For those interested in an aviation program, there is an extra section dealing with aircraft orientation.

The Navy Officer Aviation (NOA) test is being administered the last two weeks of November, Dec. 12, 13, and 14 at 2:30 p.m. (or more information the Navy will be located at the F.F.D. parking lot from 8 a.m. to 5 p.m. on the same days Tests will be scored immediately, and an Officer will be available to discuss your results and the various programs you may be qualified for.

Tanking the exam in no way obligates you to the Navy, but it just might test you something about yourself. Come in and give it a shot—you might even pass.
Over 200 donate the fluid of life

The Tri-counties blood drive of Thursday, Oct. 30 exceeded the expected goal of 175 pints, as 215 people gladly donated a pint of blood. Donations are not limited to certain blood drives as the Tri-Counties Blood bank, located at 1250 Peach St. in San Luis Obispo, accepts donations at any time. Among the many generous donors were (clockwise): Nurse Kristen Lewis makes sure that Drew Gentile’s blood does not coagulate; a patient clinches his fist to maintain pressure in the vein; nurse Ann Kalil readies the syringe to insert into the arm of Laura Wallace; the blood donating process is all over and Drew holds up his arm and applies pressure to prevent bruising.
Poles shout anti-Soviet barbs at fete

WARSAW, Poland (AP) — Thousands of people gathered at the tomb of the unknown soldier Tuesday for an unofficial service marking the 1939 revival of the Polish state, and a Roman Catholic priest included victims of communist secret police in his prayers.

During the ceremony, the wife of Lech Mostulski, a jail

Saturn rings discovery

PASADENA, Calif (AP) — Voyager 1, one day from its rendezvous with Saturn, astonished scientists Tuesday with pictures of two mismatched rings set amid the planet’s concentric rings and what may be huge forest fire dangers.

The two-ton spacecraft, on a journey of 38 months and 1.24 billion miles, was to skim within 2,500 miles of the biggest moon, Titan, late Tuesday before making its closest encounter with Saturn on Wednesday.

Everything in the spacecraft and on the ground is going

From page 1

- Police and fire departments would respond and take care of injuries. Brug said minor injuries would be handled by the campus Health Center and major injuries would be sent to Sierra Vista or French hospitals.

- Next, a check would be run for health hazards, such as gas leaks.

- If the crisis was major an Emergency Command Center would be set up for temporary treatment of injured.

- In the meantime “decision makers” from agencies such as police, fire, plant operations, health center, food services, would meet to make any necessary emergency decisions.

- Emergency workers would work to help any trapped victims.

- The final step, Brug said, would be to clean up.

He pointed out that Cal Poly is fortunate to have ten Emergency Medical Technicians who, like other emergency workers, would be put on 12 hour shifts in the event of a disaster.

“Our main goal is to protect lives and property,” said Van Actor.

A major concern of safety officials is the buildings on campus and how they would stand up to a large quake.

“We have no buildings that are ‘unsafe’ for earthquakes,” said Doug Gerard, executive dean of facilities planning.

“But he added, ‘There are varying degrees of safety.’

He said the university is not required to renovate old buildings to meet the standards of the state building codes. It is interesting to note the only two buildings that meet the present codes are the new library and the faculty office building.

“The situation is like shooting on a moving target,” said Gerard.

BE ON THE BOARD OF DIRECTORS AT 22.

Profs: Democrats are dead
From page 1 with the status quo, a belief that groups can effect change and a belief in party politics.
A candidate opposing Ronald Reagan in 1984 could gain support quickly with an image-slick guy,” George said.

George noted that today’s politicians are often resorting to the “consumer model” in win elections.

“Politicians have borrowed the consumer approach used in marketing, sales and advertising in the economic sector of our society,” George said.

He said candidates obtain positive images when they are seen as having strength, integrity and the “ability to empathize.”

Furthermore, television—which focuses on image rather than substance—has taken over many of the political parties’ functions, George said.

Ellings said that though Reagan won an overwhelming number of electoral votes, the Republican candidate did not score a landslide in the popular vote. (Reagan had 51 percent to Carter’s 41 percent.)

Pollsters’ forecasts of a closer margin between the candidates demonstrated a large number of undecideds waited until the last moment before voting for Reagan, Ellings said.

George indicated 52 percent of the electorate turned out to vote in 1980—the lowest showing since 1948.

Both professors’ cited numerous statistics to back up their findings.

BELL & HOWELL
PASADENA OPERATIONS

Come talk with us about the A, B, C and D’s of Bell & Howell.
The Pasadena operations is a major high-technology center of the company and develops products for electronic information systems.

Products range from transducers and catagories to video entertainment, to high performance magnetic tape recording systems. These operations also provide research and development support for the company. The four divisions located in Pasadena are:

AVICOM DIVISION
Engages in the design, manufacture and marketing of audiovisual entertainment systems for airlines and ocean-going vessels.

BUSINESS DATA PRODUCTS DIVISION
Engages in the design, manufacture and marketing of complete onestep, high speed Remittance Processing Systems (RPS).

CEC DIVISION
A recognized leader in the development and manufacture of precision electro-mechanical measurement instrumentation.

DATATAPE DIVISION
Specializes in providing services and products to the commercial test instrumentation and the defense electronic markets.

If you’re looking for challenge, career growth and a company where your accomplishments will be noticed and rewarded, we’d like to talk to you. We have openings in the following areas:

An Equal Opportunity Employer
Mustang football team blanks Pomona as Jackson racks up three touchdowns

The biggest game of the 1980 campaign awaits the Cal Poly Mustang football team in the form of the Boise State Broncos this Saturday night in Mustang Stadium.

Mustang head coach Joe Harper is not trying to fool anybody with a false approach to this week's game. He knows it is the hardest game on the schedule this year for his team.

"Boise State does not seem to have any apparent flaws," said coach Harper. "This is by far one of the best Boise State teams that I have ever seen."

Boise State heads into Saturday night's meeting with a 7-2 record 5-1 in the Big Sky Conference. Boise State is the best team in the form of the Broncos, said defensive lineman Tom Gilmartin.

"Boise State is our only challenge scoring 21 points in the first half to secure the Pomona win. A powerful ground game combined with effective passing led the win."

The Mustangs churned out 237 yards on the ground led by Lloyd Nelson's 148 yard effort. Steve Loyd picked 59 yards in the fourth quarter and fullback Dan Craig added 41 yards.

Jackson scored three touchdowns to spark the win. Jackson reached the paydirt from 14, 20 and 11 yards out. Jackson had an 18-yard third quarter touchdown scamper called back because of holding. Jackson now has rushed for 1,136 yards this season.

Cal Poly scored two more touchdowns at Pomona. Craig powered his way in from one yard out with two minutes left in the second quarter and Brooks Wise hauled in a 14-yard toss from Lloyd Nelson in the waning minutes of the fourth quarter.

Craig powered his way in from one yard out with two minutes left in the second quarter and Brooks Wise hauled in a 14-yard toss from Lloyd Nelson in the waning minutes of the fourth quarter.

The offense rose to the challenge scoring 21 points in the first half to secure the Pomona win. A powerful ground game combined with effective passing led the win.

Cal Poly scored two more touchdowns at Pomona. Craig powered his way in from one yard out with two minutes left in the second quarter and Brooks Wise hauled in a 14-yard toss from Lloyd Nelson in the waning minutes of the fourth quarter.

The defense will be the key for the Mustangs if they hope to throttle the Division I-AA power Boise State. The defense has been rising to the occasion as of late as it has surrendered only six points in the last three games.

The offense rose to the challenge scoring 21 points in the first half to secure the Pomona win. A powerful ground game combined with effective passing led the win.
Mustangs finish soccer season against Fresno

BY VERN AHRENDES
Sports Editor

The Cal Poly soccer program has come a long way and the 1980 campaign has been another one of the best in the nation. John Knudsen or sign up for an "program running the University of San Francisco for the Pacific Soccer Conference North league title.

Cal Poly wrapped up its California Collegiate Athletic Association play last weekend as it split with Chapman College and Northridge to finish third in the league. Cal Poly edged Chapman, 1-0, Friday night with the game winning kick coming from Rich ten Bosch. Poly traveled to Northridge Saturday afternoon and it suffered a 3-1 setback. John Becker scored Poly's lone tally. These departing seniors have suffered through the growing pains of a developing program. Brown and Cutting give scoring and he leads this year's team with nine goals.

THE Mustangs host Fresno State tonight at 7:30 p.m. Fresno State was rated last year as the top program according to the coaches' poll and it suffered a setback. John Bicker Rich ten Bosch since my scored Poly's lone tally. junior varsity days in high school.

"I have been playing against one of the best teams in the nation but it will also be the last time that Jeff Brown, Randy Cutting and Jaime Saucedo will don a Cal Poly Mustang soccer uniform."

The Mustangs host Fresno State tonight at 7:30 p.m. Fresno State was rated last year as the number one soccer team in the nation.

"Fresno is going to be our best game of the year," said soccer coach Wolfgang Gartner. "Fresno is running with the University of San Francisco for the Pacific Soccer Conference North league title."

Keyes leads Mustang hopefuls to cross country championships

BY VERN AHRENDES
Sports Editor

The Cal Poly women's cross country team is packing its bags for Tyee Valley in Seattle, Wash., for the Division I national championships. The team will be led by senior Maggie Keyes. The race in Seattle will end an illustrious collegiate career for the Cal Poly standout. Her accomplishments are endless as she has left her mark at this school as one of the greatest athletes in Cal Poly history. She is heading into the national championships as a three-time All-American in track and cross country, a two-time 1980 National Champion in the AAU indoor mile and in the AIAW 1500 meters in track, only to mention a few.

She is heading into the Seattle race as the dark horse favorite but she is a seasoned veteran who is smart enough to run her own race.

"I am not expecting to win the national title but I am looking to finish in the top five," said Keyes. "I just want to be with the leaders with a mile and a half left."

The Cal Poly team is expected to finish as one of the top 10 teams in the nation which is a big turn around from the beginning of the season.

Contrary to some opinions, an athletic shoe does not have to look like something out of Godzilla just to keep from falling apart. Tuffs are rugged beyond belief. Right fielder could be key factor

Paul Hertzler could prove an important factor in the 1981 baseball campaign. Mustang right fielder Paul Hertzler could prove an important factor in the 1981 baseball campaign. Hertzler named Mott winner

Paul Hertzler has been named the recipient of the seventh annual Robert A. Mott award. Hertzler, a junior from Reedley, earned the honor by collecting 50 hits, including four doubles and five triples for an overall .331 average in four game last spring. Hertzler named the recipient of the seventh annual Robert A. Mott award. Hertzler spent this summer playing semi-pro baseball for the Santa Maria Indians.

It was good playing for the Indians this summer," he said. "After playing last spring and seeing exactly what I had to work on, I centered my efforts on improving my hitting, stealing and maintaining my mental concentration."

Hertzler was recruited as a first baseman but was moved last year by Bill Cadwallader to right field and it caused Hertzler some problems at first.

"It was hard to keep up my mental concentration for every single pitch all three goals and Steve Wright and Berrie..." the said. "Last year was rough. We are in a tough conference and the winner must have five goals to push our team to the second round."

Hrchler named Mott winner

BY VERN AHRENDES
Sports Editor

Right field may receive a lot of attention next spring for the Cal Poly Mustang baseball team, mainly because Paul Hertzler will be patrolling the corner. The 6-3, 190-pound agricultural management major from Reedley could be a key factor in the success of next year's baseball team.

The talented junior has already had one honor bestowed upon him for his accomplishments at Poly as he was named the recipient of the seventh annual Robert A. Mott Award. Hertzler spent this summer playing semi-pro baseball for the Santa Maria Indians.

It was good playing for the Indians this summer," he said. "After playing last spring and seeing exactly what I had to work on, I centered my efforts on improving my hitting, stealing and maintaining my mental concentration."

Hertzler was recruited as a first baseman but was moved last year by Bear Cadwallader to right field and it caused Hertzler some problems at first.

Poly poloists win two tests on road

The Cal Poly water polo team climbed to within one game of the school's record for the most wins in one season with victories over San Jose State University and the University of Santa Clara.

The Mustangs outscored San Jose 18-10, and Santa Clara, 13-6, to push its overall record to 12-7, one game short of the 1975 season mark of 13 wins.

The Mustangs, after claiming a 4-2 first quarter lead, outscored San Jose 7-2 in the second period to ensure the win. Freshmen Bryan Buck and Brian Chase netted four goals apiece for the winners. Brad Stahl added three goals and Steve Harris, Steve Wright and Berrie Birnbaum scored two each.

A superlative defensive effort sparked the Santa Clara victory. The Mustangs only gave up 11 shots on goal to Santa Clara. Five of the attempts were man-up or penalty situations.

Wright led the Cal Poly scoring with five goals to push his team leading scoring total to 41 goals during the season. Bill Cadwallader follows with 34 goals.

The Mustang scoring was balanced by Bill Morgan, and Stahl with two apiece. Morgan's efforts has given him five goals in the last three games and Stahl has netted six tallys in the last three games.

The next scheduled game for the Mustangs is the California Collegiate Athletic Association conference tournament slated for Nov. 21 and 22 at the Cal Poly outdoor pool.
Censored

Opinion

Readers may recall the Mustang Daily's election dayiasco. We discovered almost too late an obscure but important statute prohibiting our endorsement of political candidates.

This is the statute, Title 5, Section 42403 of the California Administrative Code:

Funds of an auxiliary organization shall be used for purposes consistent with Board of Trustees and campus policy, and shall not be used to support or oppose any candidate for public office, whether partisan or not, or to support or oppose any issue before the voters of this state or any subvention thereof or a city, municipality or local government entity of any kind.

Because of this provision, we restrained distribution of all 7,000 copies of the Nov. 4 edition and had to run another batch off our presses with an explanation.

The law leaves us a little confused—and very angry. We were advised to kill the edition because it had contained an editorial supporting the re-election of President Carter. Our advisor consulted with a CSUC attorney on the matter and was told unspecified "action" would be taken if distribution of the offending issues was not prevented. A second look at the provision, however, reveals the arbitrary application of the code by CSUC administrators on the publishers of the Daily.

The Daily and 18 other campus newspapers in the CSUC system have editorialized for years on issues large and small, on issues trivial and important. We, however, have been told to keep quiet.

The unfair application of this statute is a violation of our 14th Amendment rights to equal protection of the law. However, even if the statute were applied fairly it would still represent an unconstitutional abridgment of press freedom.

In writing the statute, Trustees were understandably anxious to prevent possible conflicts-of-interest among state employees, mixing official duties with politics. CSUC Chancellor Glenn Dumke, for example, was criticized a few years ago for allegedly using CSUC stationary to prompt administration rank-and-file to oppose the passage of Proposition 13.

University newspapers, however, should not be legally defined as "auxiliary organization" to be penalized for editorializing because those concerned about campus affairs—including people on and off the state's payroll—need and desire an independent source of campus information. In Cal Poly's case, the Daily is the only such source in town. The city's paper, the Telegram-Tribune does a poor job of reporting campus events and the views of campus officialdom are already aired in its slick publication, Cal Poly Today.

Perhaps we are just overreacting. The provision, after all, only regulates the content appearing on the opinion page and leaves the rest of the content to publishers.

Not necessarily. The funds of an auxiliary organization, according to the statute, "shall be used for purposes consistent with (the) Board of Trustees and campus policy ... Who interprets this vague clause?

The Trustees.

It's not. The endowment we planned to run probably would have had little influence among campus voters, even as it would have had on the day of election. But the pulling of that Tuesday's edition symbolized the dark potential of the Trustees' interpretation and application of their statute.

Letters

Editor: Secretary of the Interior Cecil Andrus has made his decision: delete the four northern tracts of OCS Lease Sale 53, and offer the southern tract, the Santa Maria Basin, for lease to the oil companies. However, this decision is not final, and the next 60 days are critical.

Many people, including myself, believe that there is a strong argument for deleting or deferring the entire Santa Maria Basin from this lease sale. Some of these arguments are:

1) The Final EIS does not take into account the fact that the resource estimates for the Santa Maria Basin have been doubled. The revised resource estimates render the already deficient Final EIS completely invalid;

2) The proposed lease sale will not protect onshore air quality, causing violations of standards and non-attainment status for our county. This will result in serious socio-economic consequences to the tune of $6 million, as onshore businesses and industries pay to reduce their emissions to make up for the emissions that will occur on the Federal OCS. Non-attainment could also result in the loss of Federal funding for new industry, highways, and development;

3) Oil spill containment is ineffective in the moderate to rough seas which occur along our coast. The 3.29 major spills and the uncomputed number of minor spills that will occur, given revised resource estimates, will wash directly ashore due to the wind-blown currents which occur along our coast;

4) The proposed lease sale fails to protect the endangered southern sea otter and makes a travesty of the Marine Mammals Act and the Endangered Species Act;

5) The lease sale will adversely affect other sensitive coastal resources, prime fishing areas, and significant, high-use recreational areas along our coastline, should a spill occur.

At this point in the leasing schedule, Secretary Andrus has sent his decision to Governor Brown, who in turn has 60 days to respond. This allows another chance for additional public input. If you are concerned about the disastrous environmental/economic effects this lease sale will have, I urge you to make your concerns known. Write to Governor Brown and Secretary Andrus. You may also want to send a copy of your letter to Senator Alan Cranston and the California Coastal Commission.

Please send a letter soon. Your silence will cost you your coast.
