University Union energy conservation efforts have cut its energy use since 1977 but not without loss of creature comfort and a gain of service problems, the Union director said Monday.

Roy Gersten said the Union has pulled out two fluorescent lamps "where there were four," replaced needed in­candescent lamps with fluorescent ones and removed unneeded incandescent tract lighting altogether. "We also cut the Galerie down from 150 watt bulbs to 35 watt bulbs," he said.

Despite such efforts, the price of electrical energy has risen so much, said Gersten, it costs more now for less elec­tricity. The University Union used near­by 223,000 kilowatt-hours of electricity in October 1979 at a cost of just over $3,000. After receiving a 40 percent boost in electricity rates in late 1977, said Gersten, the Union embarked on a program of lowering electrical use. Four years later, in October 1980, the Union used 23 percent less electricity, approximately 177,500 kilowatt-hours, but at a price of close to $950.

"We have economically reached our limit on what we can do," said Gersten. Future modifications to improve elec­trical usage, such as correcting indirect lighting loss, will require special funds.

Increasing the amount of light reflects­ting off the orange ceiling panels by painting or replacing them, said Gersten, is not possible. The panels are built into the structure of the building and cannot be painted. They are in­sulated for both heat and sound, he said, and the sound holes are small enough to be negligible. Gersten said the Union is searching for low-hanging direct lighting to reduce the indirect loss. But changing different fixtures in the same area has made uniforms for the "dressable," he said four or five different types of fixtures in one area, explained Gersten. He said new direct-light fixtures could possibly be installed next summer.

The air ventilation system in the Union has also been modified at a cost of around $15,000, said Gersten, to decrease the amount of steam needed to heat and cool the building. It is now controlled by a deadband thermostat, said plant operations direc­tor Ed Naretto, which will not turn on or cool if the temperature inside the building is between 68 degrees and 79 degrees. Also installed was an em­pathy control, which will use outside air to cool the building if it is cooler than in­side temperature.

Both these systems are tied into a single ventilation system which serves the entire union complex, including the Stamp Auditorium and El Corral Bookstore. Fans control how much air can be directed where, but said Gersten, temperature is still hard to control.

The new system has brought com­plaints from students, said Union manager Joe Willis, because some areas are cool and warm faster than others. "People may have to wear sweaters or it may be hotter than they want it," said Willis. He said during the first week of this quarter when students were packed into El Corral to buy books, the temperature rose high enough in that section to turn on the absorption cooler. The cool air brought the bookstore back down in temperature, but lowered the rest of the Union so much "people were wearing coats.""There was absolutely nothing we could do," said Willis. Problems with service, according to Gersten, have also made the new air ventilation system a problem. "Very, frankly," said Gersten, "I don't have confidence in the university service." He says there is a problem with ventila­tion in part of El Corral, and it has taken the university too long to find the problem. "I can't understand why it takes days to straighten out the bookstore problem." Naretto said the duct work had been inspected and access holes cut to check the interior, but no cause have been discovered. "Either there's an obstruction or the air is being passed outside through a hole," Naretto said.
First major snow storms arrive

By The Associated Press

It took half the winter to arrive, but the first major winter storm finally blanketed the Sierra Tuesday, with warnings of treacherous driving conditions and high avalanche dangers replacing the glumness of gloomy skiers and nervous ski resort owners.

With two feet of new snow in places, Sierra ski resorts were planning to be in full operation this weekend for the first time this year. Resort workers were receiving the calls Tuesday they had been awaiting since Thanksgiving — to come to work.

"It's a great storm," Brady Hodge, director of marketing at Heavenly Valley said. "It's wet and heavy and when it freezes, it will provide a base that will last the season." Heavenly received more than one foot of snow with more still falling Tuesday. Boreal Ridge reported two feet of new snow Tuesday with 18 inches at Squaw Valley, North Star and Sierra Ski Ranch. Squaw Valley, Alpine Meadows, Sierraville, Mount Rose, Sugar Bowl and Mammoth Mountain all reported more than one foot.

The weight of the snow and its rapid accumulation produced an avalanche warning along the east slope of the Sierra. The U.S. Forest Service said the danger was extreme on all slopes above 8,500 feet on the eastern side of the Sierra from Sonora Pass to near Bishop and was very high on the east slopes of the mountains above 6,500 feet from Sonora Pass north to Yuba Pass.

IUD use by young women discouraged

From page 1

For the most part, the majority of known side effects associated with IUD use are in the genital tract. The most common complaint is heavy, Leonora, and irregular menstrual bleeding accompanied by more severe cramps.

Twelve to 16 percent of IUD users have them removed during the first year of use, usually because of pain, according to research.

Crippling and bleeding occur because the IUD is a foreign body which irritates the uterine lining and may increase the release of prostaglandins, a hormone formed by cells in the uterine lining which produces pain during menstruation, Brauninger said.

Infections of the fallopian tubes are another problem associated with the IUD. Brauninger said they can cause chronic pain, sterility and abortions, which are "life-threatening" deposits of pus.

In 1974 use of an IUD was declined, possibly because of negative publicity surrounding the popular Dalkon Shield IUD, banned from the market for causing tubal infections and one woman had a urological thread acting as "a wick which picked up bacteria from the vagina and transferred it to the uterus, which is sterile and contains no bacteria."

Another serious problem occurs when the IUD becomes dislodged, puncturing the wall of the uterus and then migrating into the abdominal cavity, said Brauninger. "It never hurts all a group owed so much to so many." He cited "countless prayers from countless sympathies and churches all across this country, the expressions of love, many of them that have come through to us by mail from children all across this country.

He said the hostages were moved by a Valentine that reached them in August from a California schoolchild: "It's just not America without you."

Only 41 of the 50 freed hostages chose to take part in the first man press conference since they were released by Iran a week ago. No one said why the other 11 stayed away.

Ex-hostages thank Americans

WEST POINT, N.Y. (AP) - The returned hostages said thank you Tuesday. Thanks to those who prayed for them, thanks to those who waited for them, thanks to those who died for them — and thanks to the schoolchildren who sent them Valentine's Day cards.

Their chief spokesman, diplomat Bruce Langen, said they were "52 equally proud, free and happy Americans" and he paraphrased Winston Churchill: "Never has there been a call upon us to do more than we are doing today."

He cited "countless prayers from countless sympathies and churches all across this country, the expressions of love, many of them that have come through to us by mail from children all across this country."

"It's just not America without you."

Reagan may lift oil price controls

WASHINGTON (AP) - President Reagan is likely to lift the remaining controls on oil prices Wednesday, a White House official said Tuesday.

The action could raise gasoline prices as much as 12 cents a gallon, while also lifting $3 billion a year from the federal treasury through increased tax revenues collected from the oil companies.

The White House had planned to announce the action Tuesday, according to a White House source who asked not to be identified, but held off at the last minute, because most of the day was devoted to the arrival of the hostages freed from Iran.

About 25 percent of all domestic crude oil and all gasoline and propane are under the price controls, imposed nine years ago. Their removal began in June 1979 after then President Jimmy Carter announced a new program in April 1979 that would have lifted all controls by Sept. 30, 1981.

The controls had been imposed by President Richard M. Nixon as part of his wage-price control program and were continued through several periods of oil shortages.

Congress gave the president power to lift the controls in 1975, but that authority was not exercised until Carter acted to gradually eliminate the unwieldy controls while trying to avoid spurring inflation.

Reagan campaigned on a pledge to speed up the removal of the controls to help spur domestic production.

One industry analyst said he doubted consumers would soon feel the impact of the Reagan action on gasoline prices because competition and relatively low demand are likely to delay some of the increases at least until spring. However, other analysts said heating oil users may feel the full impact of crude oil decontrol this winter.

More strikes possible in Poland

WARSAW, Poland (AP) - Workers staged warning strikes in a dozen Polish cities Tuesday to press for a variety of demands while student strikers were expected to resume their strike, calling for higher pay and the end of required courses in Marxism at the University of Lodz.

Meanwhile, a member of the ruling Politburo called for a purge of associates of former Communist Party leader Edward Gierek, blamed in part for a wave of strikes rippled across Poland, the possibility of a general strike loomed in southern industrial and coal regions. Independent union leader Lech Walesa, a long-time critic of Poland's union and calling for greater freedom of speech, staged a new series of strikes that were his downfall last September.

As the new strikes rippled across Poland, the possibility of a general strike loomed in southern industrial and coal regions. Independent union leader Lech Walesa, a long-time critic of Poland's union and calling for greater freedom of speech, staged a new series of strikes that were his downfall last September.

Walesa met with hundreds of angry farmers and workers in Rzeszow, 90 miles east of Krakow. In a related protest, 15 farmers staged an all-night strike in a Roman Catholic church at Swidnica, the union said.
Poly parking problem

No solution is in sight

BY RALPH THOMAS
Staff Writer

Parking problems are not new to Cal Poly, but an increase in the severity of the problem this quarter has concerned administrators who say there is little they can do to solve the dilemma.

"The problem has become particularly acute this quarter — I don't know why," said Doug Gerard, executive dean of facilities planning.

Gerard added, "I really don't see any immediate solution in the future."

He said winter weather encourages more people to drive to school, aggravating the parking situation, but the problem seems to be worse this quarter than in the past.

Jim Landreth, director of business affairs, pointed to an increase in requests for parking permits this quarter. On top of this he noted an increase in requests for "special consideration" by students who, for example, commute long distances or have health limitations. He estimated there were 150 to 175 such requests.

When selling permits each quarter the university uses an "oversell factor," Landreth said this figure determines how many more permits than actual parking spaces can be sold. He said surveys are conducted on the third week of each quarter during "prime parking time" to calculate the oversell factor.

This quarter's oversell factor ranges from 1.6 permits per space in C and H Zones to 2.0 permits per space in the G Zone, according to Landreth. All totalled, he said, there were 4,700 permits sold for 2,700 spaces.

"People want the permits regardless of whether they have to fight for the spaces," said Landreth.

ASI President Willie Huff said he has personally received more than 20 complaints about the parking situation from students.

Petition canvassers were located in the plaza of Cal Poly's University Union, at Mission Plaza, Madonna Plaza, University Square, and a mobile group walked downtown in their drive to honor the Civil Rights activist.

David Tucker, spokesman for the fraternity, said that he felt the drive was a definite success, and that most people who were anxious to sign the document, which will be forwarded to friendly legislators.

A number of nationally-recognized entertainment figures, most notably singer Stevie Wonder, have been active in a national effort to recognize Dr. King's peaceful efforts. Had he not been murdered in 1968, the Nobel Peace laureate would have been 52 years old on Jan. 15.

A car belonging to a Cal Poly student finds a little crevice to park in. Poly administrators admit that there is a serious parking problem on campus, but until the university receives funds from the state, they can't build an additional parking lot to alleviate the problem.

“Is it a big enough problem now that I think I'll start talking to President Baker,” said Huff, who also admits there is not much that can be done.

Huff, however, is concerned about the oversell factor. He said students should be made more aware of the factor when they purchase a permit. He said he is also concerned about how reasonable the factor is. If the factor is too high and if he could prove it, Huff said action would be taken.

In the past, he said, a few students with numerous parking violations took their cases to municipal court. By arguing that the oversell factor was unfair, Huff said they were able to get the violations dropped.

He pointed out that if the oversell factor is too high the university would be committing breach of contract for not providing the services paid for.

Huff stressed any type of legal action would be a "last resort" to be taken only if action from the administration couldn't be generated any other way.

Landreth said he is not aware of any legal grounds concerning the oversell factor.

A solution to the problem would be the construction of more parking space, but Gerad said this is highly unlikely.

He said the university requested $8.1 million from the state this year for the construction of various facilities, including parking lots. Of that request only $58,000 was allocated.

"It's a sort of no-win situation," said Gerad.

Gerard and Landreth mentioned other efforts being made to eliminate the parking problem. These include incentives to get students to ride bikes and mopeds instead of driving. Landreth said new bike racks have been purchased and bike paths are being improved.

The university also subsidizes discount bus tokens for students.

LEONARDO DA VINCI

AND HIS WORLD

The many wonders of this Renaissance genius — and his insatiable curiosity for knowledge will guide this course through many areas of inquiry.

Seven guest lecturers, an exhibition, films, dance, and choral music will be featured in this exceptional interdisciplinary quarter course. "The Exceptional Renaissance quarter will fulfill the Humanities: General Education requirement.

Humanities 212, Spring 1981, TTh 12-1300, Cal Poly Theatre, 3 units. This course will fulfill the Humanities General Education requirement.

MUSTANG DAILY PEGGY CROUSEBERG
Title 9 investigation continues at Poly

From page 1

"We wouldn't be where we are today without it," said Mike Wilton, men's and women's volleyball coach.

"It means that things that have happened for women's athletics have happened at the last minute," Wilton, whose women's volleyball team placed seventh in Division I competition, said that although budgets are tight for all sports, some men's sports are weighted more heavily than women's.

"It hurts to have a part-time job," said Yoshihara. "In part time, you can't do a good job."

When pointed out that discrimination could be an influencing factor in scholarships, according to Dr. Evelyn Pellaton, associate director of athletics.

Although the actual amount of money given to the men's and women's programs for scholarships is the same, said Pellaton, the men are housed in apartment style, while the women are housed in the residence halls available to all students, where the cost is almost three times as much per athlete. Thus, for the same amount of money, 102 men have a lot of opportunities, she said.

Pellaton said she thinks it's great that the university is being investigated for non-compliance of Title IX. Although the process is slow, Pellaton said, she believes Title IX has done a lot for women.

UL Is Interviewing BSEE Candidates

Feb. 6, 8:30-4:00

Underwriters Laboratories, the oldest and most respected testing company, is interviewing BSEE majors and graduates for several rewarding opportunities. These positions are located in beautiful Santa Clara Valley.

Please sign up in the placement office immediately. An equal opportunity employer, m/f/h/v.
Poly Royal head leads hectic life

BY CREOLA MILLER
Staff Writer

In spite of a hectic schedule that includes sorority life, spring graduation, and a rapidly approaching Poly Royal, Poly Royal Superintendent Leslie Binsacca keeps smiling through it all.

Binsacca has been a student at Cal Poly for four years. Although she will be graduating at the end of this quarter, she will be at Poly until spring quarter.

Focus: Leslie Binsacca, the student.

The 22-year-old journalism major was raised on a farm in Soledad. After trying the news-editorial concentration of journalism at Cal Poly she became attracted to broadcasting and ended up being on the KCPR news staff for two years.

Binsacca has been very interested in politics, even though she didn't major in political science, nor does she have any intentions of ever becoming a candidate. She wants to be a political consultant or on a campaign staff.

She said she didn't major in political science because "Journalism is a more broad-based major." She continued to say that journalism offers more political science classes that will prepare her for the campaign trail. Binsacca is a Republican, but she said that doesn't necessarily mean she will automatically work for any Republican candidate. "I'll have to look at the candidate first," she explained.

Another reason why Binsacca chose to become a political campaigner is because she loves people and enjoys working with them. For her senior project, she was the publicity coordinator for the Society for the Advancement of Management (SAM). She is currently finishing up her internship in campus Public Affairs office.

With all of the responsibilities concerning Poly Royal and completing 15 units for graduation, Binsacca also has the responsibility of being president of her sorority, Zeta Tau Alpha. Surprisingly enough, she said she still has time to sleep.

Focus: Leslie Binsacca, general superintendent of Poly Royal.

Binsacca said her position on the Poly Royal board is a daunting role. She is only the second female to be the general superintendent. In 1979, Julie Adams was the first. As head of the Executive Board, she is responsible for meeting with departments such as food services, concert committee, music, custodial, fire and safety, to find out what their standards for Poly Royal will be.

"The Executive Board takes on a lot of problems," Binsacca said. "It is all voluntary and we get no units for it." She said the reason she tackled the job is "Because it's fun, and it's a learning experience and I enjoy working with people. My patience has grown immensely. I am a lot more aware that everybody is different. No one functions in the same way." She added, "When Poly Royal gets off the ground, it is rewarding to walk around and check out everything."

"We've tackled a lot of potential problems already this year. After 49 years of Poly Royal, it's finally running smoothly," said Binsacca.

This year's Poly Royal will be different from past Poly Royals. "We're planning a parade that will go partly through downtown and back to Poly," "Experiencing New Frontiers" is the theme for this year's Poly Royal, and the parade and this year's Poly Royal Queen Pageant will reflect that."

The Queen's Pageant will take place Feb. 24, and the master of ceremonies will be professional comedian Christopher Nance. Nance is a regular attraction in Lake Tahoe and he has opened for celebrities such as Frank Sinatra and Mac Davis. Applications for Queen are currently available.

Binsacca said the board has asked former university president Robert Kennedy to be the honored guest at Poly Royal this year.

Binsacca said the board will be sending out correspondence specifically to all of the high schools within a 150-mile radius. "Poly Royal is a unique educational experience with all of its exhibits." She said that it will be like a career day for the students.

"The importance of the general and executive boards are that we are the ones doing all of the work. It takes a minimum of five hours a week to work on the Executive Board, and they don't get the recognition they deserve," said Binsacca.

Poly Royal will be presented this year on April 24 and 25.

Imagine yourself at Hughes

You won't want to miss the Hughes Career Opportunity Presentation if you're an EE, ME, Physics, Computer Science or Math major. Hughes will be on the Cal Poly, SLO campus:

Thursday, February 5, Orientation Session, 11 am - 1 pm, Science North, Room 201;
Company Presentation, 7-9 pm, Staff Dining Hall, Room B

Hughes Aircraft Company, P.C. Box 90515, Los Angeles, CA 90009.
FIRST QUALITY!  BROOKS RUNNING SHOE SALE

Great buy on these two Brooks shoes that were rated highly in the 1980 issue of Runner's World. STARTS TODAY!

BROOKS VANTAGE
Blue nylon suede. Fully padded heel cap and custom contour inside. Reinforced racing stud sole and lightweight midsole for flexibility.

BROOKS WALKER RT-1
Nylon mesh with suede upper. Padded heel contours. A lightweight racing-training shoe combined with excellent shock absorption.

What does Utah have that California doesn't have? Up until the recent storms which have hit the west coast, the answer to that was . . . snow. Utah claims to have "The Greatest Snow on Earth," so during the Christmas break, three friends and I decided to find out how true that claim is.

We left sunny San Luis Obispo on the last day of finals, December 12, bound for Salt Lake City, Utah. With four pairs of skis on top of the car, we attracted several second glances, after all, the California was suffering from an acute lack of snow.

More than 800 miles later, we didn't look so out of place. At least we had seen snow, and our dreams of skiing were moving ever closer to fruition.

Our accommodations in Salt Lake City did not include a luxurious con
doninium at the foot of the ski lift, but we certainly weren't roughing it.

Our motel covered a full city block and more than met our expectations. The Jacuzzi and indoor-outdoor pool especially interested us, but we had to send the kids over to a soak in the Jacuzzi. After reviewing our options, we chose Solitude as the second day's destination, and this time we took the bus.

When we arrived at Solitude, we found it well-named — no lines anywhere and a barely-filled parking lot.

A small operation with only four lifts, Solitude did not have the feet and legs, Webb said.

In his classes, Webb instructs his students similarly. The program is very individualized, with each person starting at his own pace, Webb said. At first students train only three times a week, with an emphasis on time spent jogging rather than distance covered. Gradually, Webb said, the students increase their training time to four times a week.

"These days a week is good," Webb asserted, "but four or five times is far more effective in creating body weight changes. Weight changes can be as much of a loss as 35 to 40 pounds in one 10-week quarter."

Zarek further recommends a cool-down period after jogging. He said one should not merely collapse after finishing a work-out, but should walk around and relax gradually to prevent any tension from re-maining. Moving around and stretching for five to ten minutes is advisable.

Both Webb and Zarek highly recommend beginners avoid hard surfaces when jogging, such as sidewalks and pavements. This is to avoid injuring one's foot when the foot contact with much more force than it is used to, said Zarek, who suggested Cal Poly's soccer field as a good surface for beginning jogging.

Extremely important to a good jogging program are good-fitting shoes or shoes without good support in the heel can cause problems of over-stress in the feet and legs, Webb said.

Webb, however, suggested one should jog a while before investing in expensive jogging shoes. He said many types of literature are available on proper shoe selection.

Although many people believe that "running off a leg cramp will ease the problem," Zarek asserted this isn't true. One should stop running when pain occurs, and apply ice, not heat, to the painful areas.

Webb added a few final qualifications.

"You have to be able to read your body," he emphasized. "You will naturally have some aches and pains — soreness in muscles that aren't used to strain. But a chronic lingering pain is different. If a person doesn't feel it, it can lead to tendinitis or fatigue problems that don't go away." Webb added it may take almost a year for the legs to truly adapt to the strains of jogging.

By ROSEANN WENTZ
Staff Writer

Allowing time for the body to adjust to a new activity is the key to a successful jogging program, according to Cal Poly's athletic team doctor and a jogging instructor.

Jim Webb, the athletic team doctor and a jogging instructor, strongly recommended a transition period to allow muscles and ligaments to adjust.

"The heart and lungs will adapt quickly," Webb said during a recent interview, but easing into a program is important to prevent problems for beginners.

Dr. David Zarek, Health Center physician, agreed. He recommended three specific steps to prevent injuries.

1. Warming up is especially important. Zarek stressed this should include stretching exercises for about 15 minutes, to increase flexibility in the calves, metatarsals, Achilles tendon, and legs in general.

2. Stretching first will help prevent strained muscles and ligaments, Zarek said.

3. Secondly, a person who has never jogged before should start very gradually, perhaps only walking briskly at first. Zarek recommends exerting enough effort to keep the pulse at about 70 percent of the training heart rate. The training rate is roughly 180 minus one's age.

In his classes, Webb instructs his students similarly. The program is very individualized, with each person starting at his own pace, Webb said. At first students train only three times a week, with an emphasis on time spent jogging rather than distance covered. Gradually, Webb said, the students increase their training time to four times a week.

"These days a week is good," Webb asserted, "but four or five times is far more effective in creating body weight changes. Weight changes can be as much of a loss as 35 to 40 pounds in one 10-week quarter."

My anticipation was razor-sharp as we drove into Morro Bay last Saturday. The slight off-shore breeze brought the tantalizing smell of the sea to my nostrils, enhancing my excitement. At long last, I was soon to meet those friends I had only admired from afar—the California gray whales.

As we waited for the crew to ready the boat, I was surprised at how few college-age people were among the group. The majority appeared to be old hands at watching the earth’s largest animals. Many of the whale fans were toting young grandchildren and armed to the teeth with cameras and binoculars.

We finally were able to observe several whales at length about 12 miles from Morro Bay and three miles off Point Buchon. First we saw several spouts, then they showed the backs of their barnacle-covered bodies. Finally, the great beasts raised the notorious “fluke”, or tail, as an indication of a dive, and disappeared for five to seven minute intervals.

The narrator spoke of their habits as we watched the whales gracefully moving in the water. He told us the California gray whales might weigh as much as one ton per square foot, and can eat up to one-third of their body weight. They build up a supply of food to sustain them on the long trek back to the northern water of the Arctic Sea and Bering strait. They migrate north after having sustained them on the long trek back to the northern water of the Arctic Sea and Bering strait. They migrate north after having their calves off the coast of Baja California. All gray whales make the migration, not only the pregnant females.

The skipper again cut the engine and the boat drifted freely on the choppy sea. We all hoped the whales would become curious and come closer to the boat to investigate. But the recent storms had made the animals hesitant, and they maintained their distance for only a few moments before vanishing.

We were toting young grandchildren and armed to the teeth with cameras and binoculars.

As we started out into the mouth of the harbor aboard a 60 foot fishing vessel from Virg’s Fish’n Barcadero in Morro Bay across from the PG&E stacks. The fee is $7.50 per person. Reservations are recommended and can be obtained by calling 772-2216. Tours are every day at 11 am, weather permitting.

The skipper knows the way—by foot.

California gray whale shows its flukes before diving west of Hazard’s Canyon.

The skipper again cut the engine, and Hardy went on speaking of whaling practices while we watched the graceful creatures from 75 yards away. As he spoke of the cruel whaling procedures of the past and the huge factory/slaughter ships of today, still used by Russia and Japan, a shiver ran up my spine to think someone could actually kill these beautiful, gentle animals. Noting the domes of Diablo Canyon nuclear power plant a short three miles from where the whales frolicked, my apprehension grew.

A somber mood fell over the group as the boat began inching back towards the bay. The suddenly-icy wind and high swells added to seasickness of myself and several others. In trips to the rail, I contemplated the magnitude and dignity of the whales I had seen, and silently prayed for their survival.

Even without such serious thoughts, a whale-watching trip is most definitely exciting. Our tour was with Virg’s Fish’n Center, located on The Embarcadero in Morro Bay across from the PG&E stacks. The fee is $7.50 per person. Reservations are recommended and can be obtained by calling 772-2216. Tours are every day at 11 am, weather permitting.

The skipper knows the way—by foot.

10th ANNIVERSARY CELEBRATION of the Julian A. McPhee University Union
FEBRUARY 1st through FEBRUARY 7th

KALEIDOSCOPE
University Union Board Of Governors

THIS WEEK IS FROM UUBG TO YOU!!! COME EXPLORE THE UNION AND CELEBRATE THE BIG NUMBER "10" BIRTHDAY!!!!!

Evening Entertainment in Chumash Auditorium

Sun. 7pm Direct from the Tonight Show—
   ED SHAUENESSY & Energy Force Big Band
   Students $3.50 Adv. $4.50 At the Door
   Public $5.50 Adv. $6.50 At the Door
   ASI Fine Arts

Monday 8pm THE AMAZING KRESKIN—
   World Famous Mentalist and ESP Specialist
   Students $2.00 Adv. $3.00 ATD
   Public $3.00 Adv. $4.00 ATD
   ASI Speakers Forum

Tuesday 8pm PETE BARBUTT—Jazz Pianist and Comedian (18 and over, ID Required)
   Students $3.00 Adv. $4.00 ATD
   Public $5.00 Adv. $6.00 ATD
   ASI Special Events

Wednesday 7pm & 9pm in 3-D
   CREATURE FROM THE BLACK LAGOON
   $.50 (Not open to the public)
   Tickets go on sale at 6:15 the evening of the show
   ASI Films

Thursday 8pm
   Special Coffee House—Peter Alsop in Concert
   Students $1.00 Public $1.50

Friday 8pm
   Dance and Casino Night—
   Featuring the Band "MAGIC"
   Students $1.00 Public $1.50
   ASI Recreation and Tournaments

Saturday 8pm Polyphonics Choral Concert
   with Special Guest Gary Fry
   Students $1.50 Public $3.00
   Music Board of Control

Kaleidoscope Specials!!!

½ PRICED ICE CREAM CONES—
   The Ice Cream Parlour
½ PRICED BOWLING, Discounts on Billiards—
   UU Games Area
   Specials at the Bookstore—
   El Corral

Something is Going On All The Time!!

Mon-Fri 9am-5pm BILLY CRYSTAL
   on Video Tape in the Stairway Lounge
   ASI Television Programming

Tues-Thurs 10am-6pm A CRAFTS FAIRE
   WITH A COUNTRY FLAIR!
   ASI Crafts Center

Tues 11am-2pm Cultural Awareness Plaza Fair—
   Cultural Shows & Food
   Cultural Awareness Committee

Thurs 11am-2pm Club Day in the Plaza
   All Clubs Are Invited! Sign up now!

Fri 1pm LIVE IN THE PLAZA!!
   The Band MAGIC will perform!!
   ASI Recreation and Tournaments

TICKETS ON SALE NOW IN THE UU BOX OFFICE
Presented by UUBG in coordination with ASI PROGRAM BOARD

**Lost and Found— **

*the 4th dimension*

**BY CARLA SIMI**
Staff Writer

Ever wonder where personal belongings lost on campus often end up? The fourth dimension or a parallel universe are good guesses, but a more appropriate choice is Cal Poly's Lost and Found department.

Although not every misplaced or forgotten item finds its way to the campus Lost and Found, the amount of paraphernalia that does come in is "incredible," said Ethel Cappelluti, office supervisor for the plant operations department.

"Noting that many departments tend to hold on to abandoned items, Cappelluti said, "In the long run, the easiest thing to do is to bring them directly to Lost and Found."

Common drop-off points such as the University Union and Vista Grande, along with individual departmental offices, are examples of where lost items are frequently retained, even though the Lost and Found department exists solely for that purpose.

Located in the same building (No. 70) as the Receiving Warehouse, the Lost and Found department is admittedly out of the way for daily visits. But "sending things on a regular basis" would alleviate a good deal of trouble for the individual who loses a valuable possession, according to Cappelluti.

She also stressed the importance of recording the serial numbers of one's private property for identification purposes. Calculators in particular frequently turn up at the Lost and Found department, but unless the owner knows the serial number, one TI-55 generally looks just like the next one.

The serial number is required to claim calculators and similar valuables, unless distinctive characteristics can provide positive identification, Cappelluti said.

That policy stems from a costly experience several years ago when the department had to buy a calculator for a student after the one he lost was claimed by another student who had identified it merely by brand name. The rightful owner knew his serial number, but he became the victim of an unfortunate error.

As a result, the Lost and Found department will not release an item until proper identification has been made, Cappelluti stated.

Unclaimed property is eventually put up for sale at the Lost and Found auction, which are held when large amounts of miscellaneous have accumulated, usually about twice a year, she said.

Only items that have not been claimed after six months or longer are included in the auction, which operates on a blind bidding system.

The system allows bids to be offered individually, with the sale going to the highest bidder.

The money collected from the auction goes into Cal Poly's general scholarship fund. The Lost and Found department contributes approximately $2,000 to $4,000 annually through auction proceeds.

The most common items to appear at Lost and Found include clothing, calculators, textbooks, and car keys, Cappelluti said.

**CAREER OPPORTUNITY IN ELECTRONICS**

Are you interested in the engineering challenges of a dynamic manufacturing concern? If so, we may have just the position you're looking for.

WILTRON is a world leader in the manufacture of state-of-the-art microwave and telecommunications test instrumentation. Due to our steady growth, we currently have several opportunities for MANUFACTURING ENGINEERS and RESEARCH AND DEVELOPMENT ENGINEERS.

You will enjoy challenging work in a modern facility with an outstanding benefit package that includes cash and invested profit sharing, tuition reimbursement and flexible work hours.

A WILTRON technical representative will be on campus Wednesday, February 11, 1981, to conduct pre-employment interviews. Contact your placement office today to arrange a convenient time.

---

**ESDCO.**

LET'S TALK ABOUT GOALS, YOURS AND OURS!

Interviews - Wednesday, February 4, 1981

We are a San Diego based electrical and plumbing wholesale distributor with locations in Southern California and Arizona.

If your career goals match our growth and expansion plans, we offer a training program in all aspects of wholesale distribution.

Ind. Technology and Bus. Administration students graduating in March, June and August, 1981, please contact the Placement Center for an interview appointment.
Cal Poly baseball prospect John Silacci has been forced to await a ruling by the NCAA to determine his eligibility for next year's Cal Poly team. The Cuesta College Transfer was involved in a serious automobile accident and was not expected to play baseball again.

Accident and ruling stymies

BY VICKI WIGGINTON Staff Writer

A serious accident and an obscure junior college ruling may keep a Cal Poly baseball player off the playing field for a season. According to National Collegiate Athletic Association (NCAA) rules, a college athlete has five years of college in which he may compete in four years of intercollegiate athletics. This rule is serving as a source of frustration for 21-year-old John Silacci, that baseball and switch hitter for the Mustangs.

While attending Cuesta College in 1979, Silacci and five of his teammates were involved in a serious traffic accident. A drunk driver crossed lanes on Highway 101 and put the van of the team members head on. All the players were seriously injured, and none were able to continue play of the 1978-79 baseball season at Cuesta.

Silacci, asleep in the back of the van at the time of the accident, remembers his reaction clearly.

"The first thing I was aware of was gasoline, and that brought me around in a hurry," Silacci pulled himself and a teammate out of the van, still unaware he had a serious enough injury to keep a teammate out of the hospital for six months, it was during the 78-79 season when Silacci became aware of the eligibility of the six injured players. Due to the nature of the accident none of the players were at fault and the small number of games they had played in, the officials decided to give the players their year of eligibility back. Their names were wiped off the participation lists for the 78-79 season, giving them eligibility to play in the upcoming year.

"As far as the league was concerned, I wasn't aware of the Cuesta team in 78-79," said Silacci, "I wasn't aware of the time, however, that I might lose a year of eligibility at a four-year college." It was during the 78-79 season when Silacci became aware of the possibility the NCAA may have hurt Silacci's eligibility, he sent an eligibility review request form to the NCAA through Associate Athletic Director Dan Marple. "I don't think they'd be stupid," said Silacci, "I don't think they'd do that."

Harr and Heaton agree that Silacci's absence on the 78-79 participation lists may be the key issue, though Heaton added that if the NCAA looks at the fact that Silacci did play part of the 78-79 season the NCAA may disregard his absence on the lists.

Dan Marple, baseball coach at Cuesta College, doesn't believe the junior college conference was aware that they could be causing the players eligibility problems. At the time, said Marple, the league was very sympathetic, because "it was questionable whether any of the boys would be playing ball again.

Marple tried to get an opinion from the NCAA during the 78-79 season, but said the harder he tried to get an answer the more of a runaround he got from the NCAA. He says now he may have hurt Silacci's eligibility chances by stirring the matter up, but at the time it was only concerned with Silacci's chances of playing college baseball.

The only other accident victim still playing baseball is Silacci's friend, Carl Root. Root is facing the same problem as Silacci at Hanilasu State University, but will wait to make his request until after the ruling on Silacci. Though it must be frustrating to spend money practicing with a team he may not get to play with in competition, John has a positive attitude.

"I don't let it affect me too much. I'm concerned about it, but I don't let it affect my play. I know I still have one year left, so I just don't think about it on the field." When asked about his expectations on the ruling, John said: "I'm optimistic, but I won't be surprised if they say no.

If given only one year of eligibility, Silacci says he will play next year, and concentrate this year on his senior unit. Harr said Silacci is welcome to continue practicing with the team this year regardless of the NCAA's ruling, which is expected within the next week.

The waiting game Silacci is playing doesn't seem to have affected his love for baseball in any way. When asked about a future in the big leagues, he gave a vague reply.

"It's every baseball player's dream to make it to the big leagues. For some, the dreams don't always coincide with reality." It looks like reality, in the form of fate and the NCAA, is throwing Silacci a curveball.

Eat a Pizza or be stupid!
At invitational tournament

The Cal Poly gymnastics team will be busy this week. The Mustangs visited Sacramento Wednesday for a tri-meet with San Diego State and Chico State. Coach Amy Proctor’s team then faced Sac State again on Friday in a tri-meet with San Francisco State in the Bay Area. The Mustangs hold a 1-1 record with a win over Southern California Athletic Association foe Cal Poly Pomona. The Sac State Hornets, under coach Barbara Stoglow, are coming off victories over Arizona State and Scottsdale Junior College in Arizona. The Hornets are paced by freshman Terri Meyer who should compete in the floor exercises against Poly.

Last year Chico State defeated Cal Poly, 122.0-105.25. Poly’s Tammi Whittemore was the only individual winner as she finished first on the balance beam with a 7.85 score. Chico’s Cathy Skyles won the floor exercise, bars, vaulting and the all-around titles.

Poly gymnasts travel north for two tri-meets

Bowling club claims first at invitational tournament

Senior guard Ernie Wheeler (left) has been a key element in Poly’s Division I leading defense which has yielded only 54.8 points per game. Poly finishes league first half tonight as it visits Bakersfield.
It has been said that nothing in life is inevitable except death and taxes. If that is the case, Cal Poly students are going to have to face the inevitable—soon.

The ASI student senate passed a resolution last week to submit a proposal to the campus voters at the spring ASI elections which would raise the ASI fee gradually over the next four years. Because the existing $20 each student pays every year as part of the registration fee is no longer enough to financially support the 310 organizations the ASI recognizes, a fee boost seems both practical and necessary.

Expenses have zoomed 541 percent since the student senate last hiked the fee increase. Income, however, has lagged slightly behind, as the ASI has taken in 584 percent more funds last year than it did 15 years ago.

But unfortunately that is the good news. The proposed fee hike was increased dramatically from 1965 to 1977 because there were few limits on Cal Poly's growth, hence an increasing number of students to tax. But a population ceiling was instituted in 1977 which choked off significant jumps in income.

At the same time inflation has spiraled. So while prices have leapt considerably since 1977, the income base has not. If nothing is done, organizations on campus face serious funding trouble.

To avert a financial catastrophe, the ASI passed a resolution Wednesday which would increase fees $2 next fall and $1 per quarter for the next four years. This means the ASI fee would be hiked to $18 by 1985. Translated into dollars, this means the student senate would have $16,000 more to dole out to clubs at the end of next year.

This proposal, if it is accepted by the voters in June, would not only benefit members of the individual clubs, but anyone who has watched a movie, listened to a concert or taken advantage of any of the services campus organizations provide. The ASI reserves about $2000 over the last year. Without an ASI fee hike the ASI Films Committee will probably either have to raise its admission prices or buy less expensive, and correspondingly lesser quality, films for similar numbers. Letters should be written to the student senate, in Room 226, Graphics Arts Building, to urge them to do this. Letters must include writers' names and numbers and names of the people or organizations involved, in case further condense, rewrite and edit press releases are needed.

The student senate has taken care not to raise the ASI fee too drastically. The Mustang Editorial board believes that students will be able to absorb the $8 increase.

The student body of Cal Poly, when it strolls up to the voting booth this spring, will be given the choice of whether to pay a dollar more to the ASI each quarter or veto the student senate proposal and endure a reduction in the quality of services offered on the campus. We hope the students decide wisely and open up their wallets a crack more so that the services the students enjoy today will be of the same quality—or better—years from now.

Cal Poly isn't one of them.

Only recently have the first of a series of steps been initiated to rectify this situation at Cal Poly. It will be 1982 or later before any Cal Poly student will graduate with VDT experience under her or his belt. As a graduating senior I will feel sick to my stomach! You blew it, Iran. The Mustang Editorial board believes that students will be able to absorb the $8 increase.

There are many departments on campus which are fortunate enough to have computers available to their students in order to further educational and career goals. Unfortunately, the journalism department is not so well endowed.

We're not. It's not the large metropolitan dailies of this country I'm speaking of (they could do a lot better - years from now.) It's the home town paper - even San Luis Obispo's Telegrapm Tribune is in the process of switching to VDTs.

I have heard that Iran might have delayed releasing the hostages until Inauration Day in an effort to hurt Jimmy Carter, as he would undoubtedly get less credit for procuring the hostages' release.

A rather pathetic effort, in my opinion. A much more devastating way for the Iranians to hurt Jimmy Carter and the entire United States of America would have been to release the hostages during the Super Bowl.

America would drive itself to distraction trying to figure out what to watch on TV that day, and would break millions of televisions by switching channels back and forth at breakneck speed. Furthermore, if Iran had blown up the hostages' airplane, millions of football fanatics would be driven to collective, bloody-minded rage when the unpardonable sin (interrupting the Super Bowl) would have been committed to announce a trivial thing like that. America would have been instantly driven into barbarism.

You blew it, Iran.

Fee increase is OK

Editor:

You diehard Libertarians make me sick to my stomach! When Mr. Jensen, did you poll 15,000 students and get our opinion on ASI fee increases? And who are the people in general anyway?

The ASI is a very valuable part of each student's life here at Poly. The ASI provides funds for films, concerts, football and a host of other organizations and activities that most of us take part in. Who do you suppose is going to provide funds for these organizations? Do you really think voluntary donations are going to do the job Mr. Jensen? I hardly think so.

ASI also provides a way for students to actively participate in these organizations with an added dimension to education, a learning by doing. Or haven't you heard Mr. Jensen?

I not only favor a $15 increase over the next five years, but I wouldn't mind paying an increase of $20 over the same period of time.

Douglas Bryan
