Student groups said to be 'suffering'  

ASI fee increase justified by officers

BY BARRY CALISTER

Double-digit inflation and a freeze in employee paychecks have taken the sting out of the ASI fee increase, said ASI President Nick Forestiere, who mentioned that the increase would allow the ASI to keep up with inflation until the maximum population of 500 was reached. This means that the ASI must use this money to run the ASI Operations Center as well as the ASI Fee Office.

The budget increase from $4,450 to $6,264, which was justified by officers, will allow for an increase in student fees from $4 to $6.25 per semester. This increase is expected to raise about $1,800 per semester for the ASI Operations Center and $1,100 for the Fee Office.

The ASI increase is expected to be passed on to the students in the form of higher fees for services such as music, theater, and dance. The increase will also allow for the purchase of new equipment and the replacement of old equipment.

The increase is also expected to allow for the expansion of ASI programs and services. This includes the ASI Fee Office, which will be able to hire more staff to handle the increased workload.

Campus conservationists complete energy audits

BY ROBIN LEWIS

Energy audits of six Cal Poly buildings have been completed and are allowing funding to implement the results. Cal Poly Director of Plant Operations Ed Naretto reported Friday that the six buildings, Fisher Science Hall, Men's P.E. building, the administration building, the Health Center and Santa Lucia dormitory, were checked for electric and heating problems that could increase by a California Energy Commission audit system, Naretto said.

Performing by student auditors and accredited by the CEC, the audits recorded building size, construction materials, the type and amount of insulation in the building, and the use of preventive measures such as weather stripping.

The auditing recommendations such as lighting reduction, but the major modifications are suggested by engineers who look at the report to decide how problems should be corrected when funds become available, said Naretto.

Broken into two categories called Operational and Maintenance measures will be returned in four months. The bulk of Operational and Maintenance measures involve reducing unneeded light, explained Naretto, as there has been done in the University Union and the corridors of many campus buildings.

Such measures are inexpensive and have a short investment return time. Operational Energy Conservation measures are the operational proposals that first pass through an energy coordinator in the California State Colleges and University system, Naretto's office, then are submitted to the CEC, where they are approved or disagreed with help from the Department of Energy. Naretto said schools must compete with other state institutions such as hospitals and approval is awarded "to those institutions with the most payback as far as energy is concerned." Naretto said the call for application usually goes out at the beginning of January, but so far he has "not heard a thing." He believed changes within the Department of Energy were holding the process up. The call for application usually goes out at the beginning of January, but so far he has "not heard a thing." He believed changes within the Department of Energy were holding the process up.

An energy audit for the Health Center showed that for an $837 investment, $2314 worth of electricity could be saved each year. The initial investment would be returned in four months.

But major system changes, said Naretto, those known as energy conservation measures, are much more expensive, and if approved by the CEC will have to be contracted.

Harmful fruit fly feared by SLO County farmers

BY DAVID BRACKEY

Much of California's fruit industry, including that of San Luis Obispo county could face wide-spread damage from the Mediterranean fruit fly, a Cal Poly professor reports.

Dr. Sherman Phillips, a crop science professor, warned that if allowed to control the fly in the Santa Clara Valley, the fly will be infested by them "in no time."

"The flies could be the biggest agricultural threat to the state for the next decade," Phillips said. Better known as the Medfly, it was first discovered in the San Fernando Valley and in San Jose. The flies were quickly exterminated from the San Fernando Valley, but they spread from San Jose to infest much of the Santa Clara Valley. Although the flies lay eggs in more than 200 fruit species, and Phillips said that if California should become infested by the Medfly, it will be very difficult for the state's growers to export any fruit. Other states and countries, he explained, will be reluctant to buy any fruit they fear is infested by the Medfly. Mediterranean fruit flies are about the size of the average house fly, and are recognized by dark bands or spots in their wings.

If they should spread to SLO County, Phillips said, it will be necessary to take containment measures similar to those taken in the Santa Clara Valley. Containment can be a very difficult, if not impossible process, he added.

In the Santa Clara Valley, Phillips said, 133 square miles of city and agricultural area have been sprayed from the air with the pesticide Malathion. This spraying, he said, is intended to put a significant dent in the medfly population. However, Phillips stressed that Malathion is one of the safest pesticides known to man.

With the spraying process now completed, Phillips said, the Santa Clara agricultural commissioners are now releasing sterile male Medflies at a rate of 100 per acre. "We hope that enough of these sterile flies will mate with females to wipe out the species from California," Phillips said.

If the flies should reach SLO county, Phillips said that spraying large areas with Malathion might not be popular at first, but stressed that it would be safer and cheaper than letting the flies become too numerous in the area.

Reagan abolishes oil controls

WASHINGTON (AP) - President Reagan abolished the last federal controls on oil prices Wednesday in a hope that higher costs for consumers will force more conservation in homes and spur increased production by the industry.

As a result, motorists may pay 3 to 5 cents more a gallon for gasoline in the days ahead, said Energy Secretary James B. Edwards. Consumer groups said the increase could be as much as 12 cents a gallon.

Edwards said the impact on home heating oil prices would be minimal, if there were any at all. Energy Action, a consumer group, said heating oil prices could jump by more than 10 cents a gallon in February.

Edwards, a dentist by profession, readily admitted he did not know the full impact of Reagan's order and, at one point, said he was "a little confused" about some of the details.

"We did it because the president promised it in the campaign," Edwards said. "We think it's good for America, and we have certainly studied it to some extent." He cleared up one loose end not specifically covered in the agreements, which would be the disposition of nearly $500 million in military equipment purchased but not shipped by the Iranians are living up to their obligations under the agreement as well.

Many forms of birth control unsafe or ineffective

BY MARY KIRWAN

The quest continues for safer and more efficient means of contraception, a number of products now in use are under scrutiny by the medical community, and, in some instances, are being removed from the market.

Cal Poly’s La Femme Clinic, trading all other county agencies, recently stopped prescribing the morning-after pill as a means of contraception after years of use, according to clinic physician consultant Dr. Andrea Brauninger.

This is the third and last part in a series on birth control for college students.

"The reason we don't use it any more is it's such a huge dose of estrogen that we really felt uncomfortable. The side effects are unknown. It's like taking a year-and-a-half's worth of estrogen, which have been shown to cause cancer led to its ban in Australia and New Zealand. In the United States, the FDA recommends that it be used in emergency situations only and emphasizes that when it is used and fails, abortion should be considered, because the drug may have damaged the fetus."

Thus far, La Femme Clinic has not treated any serious side effects resulting from use of the morning-after pill, Brauninger reported, although, nausea and vomiting are common problems with its use. This is treated by either pills or postponements, she said.

Another new method of birth control is the prostaglandins, a group of naturally occurring chemicals which bring about abortion by stimulating contractions of the uterus. One problem with prostaglandins, according to literature, is their effect on muscles of the digestive tract, producing nausea, vomiting and diarrhea. Another problem, said Brauninger, is the possibility of excessive bleeding and infection if an incomplete abortion occurs and all products of conception are not expelled.

Long-acting progestin injectables and implants under the skin are another recent means of pregnancy prevention being studied. Although these are not used in the United States, they are used in over-populated and poverty-stricken countries Brauninger said. This particular type of progestin comes in suppository form.

"They are not as effective as I was thought they were when they first came out," said Brauninger. "One of the newer types of progestin implants, Encore Oval, which was tested in West Germany and made available in the United States, has proven ineffective, Brauninger said. This particular type of progestin comes in suppository form."

After insertion it is supposed to form a dense sperm-killing barrier across the cervix, similar to a diaphragm. Brauninger said their effectiveness rate is low because they are often dislodged.

There are many other types of birth control in the testing stage but few compare to the effectiveness of methods already on the market. As of yet, flawless birth control is far from sight, but the quest for it continues.

Sound waves used in fetal care

TUCSON, Ariz. (AP)—Arizona scientists are bouncing sound waves off tiny hearts to search for cardiac defects and problems while babies are still in the womb.

The "ultrasound imaging" techniques being developed at the University of Arizona's Health Science Center may be able to provide accurate, safe, and non-invasive diagnosis of congenital heart defects, said Dr. David J. Sahn.

Sahn told an American Heart Association seminar Tuesday his team has examined about 400 unborn infants, half of them born in high-risk pregnancies and has succeeded in interpreting their "ultrasound images, which allows diagnosis as early as 18 weeks into a pregnancy, can ease a high-risk mother's anxiety if results are good.
Poultry to gobble goblins

Cal Poly's Poultry Industry Department will celebrate a significant milestone when students, faculty, alumni and guests gather at the golden anniversary Turkey Banquet on Saturday, Feb. 7. Dr. John Cosart first suggested that Cal Poly have a business fraternity and has been a guiding force of the department, said Voitle, head of the Cal Poly Poultry Industry Department.

Voitle said the golden anniversary banquet will mark the inception of three new awards to be presented to student and industry recipients.

Two of the awards have been made possible through Richard Leach, who served as department head for 37 years and was the guiding force of the department. Leach is now deceased.

The outstanding senior student in the department will receive the Richard Leach Outstanding Senior Award, an engraved watch and certificate, and have his or her name engraved on a plaque permanently displayed in the department's display case.

Another student will receive the Richard Leach Superior Service Award, an engraved plaque and have his or her name also engraved on the department's display case plaque.

Letting students know what the poultry industry and business worlds are like, is among the goals of the newest business fraternity on campus.

Delta Sigma Pi, which had its first meeting in social fraternities, is open to students majoring only in business and economics. The fraternity fills a niche not served by the School of Business, said Carol Wingeried, head of the Cal Poly Poultry Industry Department.

Voitle said the golden anniversary banquet will mark the inception of three new awards to be presented to student and industry recipients.

Two of the awards have been made possible through Richard Leach, who served as department head for 37 years and was the guiding force of the department. Leach is now deceased.

Alpha Beta Tappa Kegga I Felta Thi and Whipp It Too is what the girls call the 'sorority' of Fremont Hall.

While other girls believe that joining a sorority is a way to bond with other pledges. President Pam Cordi said, "We are not allowed to morally degrade others for initiating or just being part of the fraternity."

Kicking off the pledges, making them eat or drink and causing excessive fatigue are definite no-nos.

Some of the business activities include tours of Bank of America, San Luis Bay Inn and luncheons with businessmen.

They also have social activities like wool socks and yellow ruffles for $50 worth of gas, Halloween caroling for coin-operated homes in town, parties for pledges and their guests and dinner with other pledges.

The fraternity's leadership is voted for by the pledges. President Pam Cordi first suggested that Cal Poly have a business fraternity.

Costar's duties are to preside over all meetings and to coordinate the fraternity.

Vice President Jim Voor said, "We are concerned with the membership of the fraternity and are in charge of all committees."

Other officers include Secretary Carol Wingeried, Treasurer Gambersett and Historian Astrid Lang-

Fremont sorority formed

Dorms whip study breaks

"It's almost the entire second floor," said Estep.

People are willing to join the group because it's something fun, Estep said.

She said about every other night the girls get out their plastic sunglasses, Mickey Mouse ears and matching green Cal Poly t-shirts, and while wearing this bizarre attire they sing into tennis rackets and do a song routine to the Devo song "Whip It." "It's like a study-break type thing," said Estep.

The 'sorority' enjoys doing the "Whip It" routine and doesn't have many other activities.

Yet, Estep said, "Some of us went to Disneyland at Christmas and we have gone out to dinner together." She said, "It's not a serious thing. We want to get our minds off studying for a while."

Because all the girls live in the dorms, the 'sorority' is their opportunity to get together and "let off some energy," said Estep.

Alpha Beta Tappa Kegga ... was originally the idea of Maria Casas and Julie Ragu. "They started listening to 'Whip It.' Then everybody started listening to it. We started dancing up and everyone got into it," said Estep.

"It's just a fun thing to do," she said.

There is also a nine member executive board which coordinates the fraternity's basic policies.

Jim Kaplan, Cathi Crawford, Bill Vogel and Astrid Lang-Ree, members of the fledgling business fraternity Delta Sigma Pi, discuss ways to introduce fraternity members to the world of business.

Energy funds due

Poly art professor Robert Reynolds paints realistic pictures of scenes along the central coast. A native of San Luis Obispo, he has work in more than 800 collections public and private.

Since he was born and raised in San Luis Obispo, much of Reynolds art deals with the images found here and throughout the state. Looking back, Reynolds says that it was harder for him to see one of his paintings sold when he was younger. "I felt some remorse," he says. "But on the other hand, it's a wonderful experience to know that someone else likes the work you've done."

At a local art store. "From then on I knew for sure it was what I wanted to do," he said.

Two years later, he was accepted to the Art Center College of Design in Los Angeles. The college was a "training ground" for him and Reynolds says that the school taught him how to be a professional. But by the end of his four years there, he was "burnt out."

After working at Hearst Castle as a photographer, Reynolds came to Cal Poly to get his teaching credentials. It was at this time that he started selling and displaying his work.

Newest Northrop Fighter Advances
F-5 Family
March 24, 1980 - Hawthorne, California

The new generation of Northrop's F-5 family of low cost tactical fighter aircraft, the F-5G, was announced at Hawthorne today, stepping up a nearly 20 year evolutionary program for the company. The single-engined F-5G is conceived to meet world defense needs today and throughout the 1990's, and offers an affordable, supportable defense system that keeps pace with the changing requirements for national security.

February 1981

Northrop Aircraft is still designing and building high-performance aircraft today in the company's multi-plant complex in Hawthorne, California. For 10 years, we've promoted the people associated with our products and furnished one of the line's benefits packages available in high impact industry segments. An education reimbursement for employees in an accredited graduate study program; a convenient savings plan; for every dollar invested, Northrop contributes 50 percent of automatic matching - including a week-long Christmas holiday. In addition to a creative work environment, you'll enjoy Southern California's year round recreational paradise. And, Northrop's recreation club sponsors many enjoyable activities such as skiing, golf and fishing.

If your interests are in TECHNICAL ENGINEERING, which includes AERONAUTICAL, ELECTRICAL, MECHANICAL, COMPUTER SCIENCE, MATERIALS SCIENCE, and MATH, B. S. level only, see Northrop today for your tomorrow.

Contact the placement office to schedule an appointment with a Northrop representative. If you come to visit with us at this time, please forward your resume to:

Making advanced technology work.
Craft Center instructors have been putting in 25-30 hours of free time per quarter, Nelson added, and if they refuse to donate their time anymore there will be no more Craft Center instructors.

"The Fine Arts Committee will be hard-pressed to book a Quintessence series with professional classical musicians," Nelson said, "and they will have to change to young professional artists and sacrifice quality.

The quality and diversity of programming over all would be affected by further reductions, Nelson noted, because with a 10 percent subsidy cut per year the board cannot afford to schedule events that will not attract at least 60 percent of the students.

Forestiere agreed with Nelson, saying that groups cannot afford to take chances with cultural or special interest programs with a small audience appeal and must therefore schedule events that will satisfy the majority.

ASI President Willie Huff also agreed with Nelson, adding that the board must develop a narrow focus and only plan events that will show a profit.

Nelson noted that many of the program cuts are recovered in an addendum to the board's budget request which would become effective if either the present fee increase proposal or a similar fund raising measure were initiated.

A less visible but nonetheless vital part of the ASI organization is the ASI business office, which also faces cutbacks and raising costs.

The business office handles all of the financial accounting for ASI organizations and bylaw groups, including 310 clubs.

Harvey Blatter, ASI accountant, released figures from audit statements in 1965-66, when the last fee increase was put into effect, and 1979-80 when the campus reached maximum enrollment.

These figures indicate that in 1979 the office had to handle accounts for twice as many clubs than in 1965-66, and in 79-80 ASI organizations comprised only 9 percent of the total budget, compared to 17 percent in 1965-66.

In addition, Blatter noted, the office has lost half of a position and must operate more accounts with less personnel.

Blatter explained that the office has been able to keep up with increasing salary and equipment costs only because the students have manipulated the budget to allow for business expenditures necessary to run the ASI.

As a result, he added, groups must now pay for services which were provided free of charge and must deal with lower subsidies each year.

He noted that clubs generate almost as much business as all other ASI organizations and programs, as they account for almost half of the checks and purchase orders issued by the office.

Both Forestiere and Huff emphasized that the office is vital to campus clubs, for without it the clubs would have to deal with local banks which would not offer the freedom and convenience the business office features.

Forestiere noted that groups can receive cash advances from the business office without normal loan procedures and can cash checks without the two signatures required by most banks.

Huff said that if further cuts are needed, certain groups will no longer be able to use the business office as first priority and must go to administering the ASI.

Huff is chairman of a senate committee designed to educate the student body on the importance of the fee increase.

He noted that the drive will be run much like his presidential campaign and will examine opposing arguments and develop counter-arguments.

He said they will also use the student senate as an open forum with some special sessions in the University Union Plaza and dormitories.

"We can publicize the way we spend our money," Huff said, "we have nothing to be ashamed of because we do an exemplary job, compared to other campuses."

Huff added that "when we get the information out students will realize that ASI is doing a good job."
Dungeons and Dragons—fantasy on a game board

BY NANCY LEWIS

Role-playing, escapist, relaxing, imagination, frustration-releasing. These are just some of the adjectives Poly students have used to describe the phenomenon of Dungeons and Dragons.

Dungeons and Dragons is a war game based on medieval mythology. The object of the game is to survive and become both rich and famous.

"A definition of the game," said sophomore aeronautical engineering major Don Erickson, "is hard because the game can't be stated concisely.

"Any definition on the game Erickson said "it is a paper and pencil game in which imagination is a must; it is an escapist's fantasy game and it differs from other games in that there is no set victory condition." The content of the game includes paper, pencil, die ranging from four- to 20-sided, graphs, maps, screens to set before the player and a dungeon master, also known as the referee or GOD (game operations director).

The dungeon master plays the role of all the monsters. Individuals are taken down into dungeons, rooms traps, and above ground where the monsters lurk.

"The number of monsters," said Erickson, "is limited by the dungeon master's imagination and ingenuity."

Dragons, the other half of the title, are among the most powerful monsters, and during medieval times they surpassed any other type of danger, according to the sophomore. They are "intelligent creatures who use magic," he added.

The game begins with the six-sided die to determine what character each player will act out in the setting decided for the game.

There are six major classes of characters: the fighter, cleric, magician-user, thief, monk, and the bard. Each character contains one or all of these virtues: strength, intelligence, wisdom, charisma, dexterity, and constitution.

In "D and D," an individual can have more than one character, but according to Erickson, these dual roles are reserved for the more knowledgeable players. This is where the real acting comes in.

Erickson said the beauty of the game is the role-playing system. It is open-ended and there is no set victory, as in other games. "D and D" can have any number of people playing, although it tends to become much more complicated the more people that play.

There is a distinction between a game and a campaign. A game lasts one night, but a campaign can last forever, as long as the members continue it.

The major charge against "D and D" is that it is a war game, but Erickson said, "It is just the position you're looking for.

Erickson agreed with this analysis. "D and D" to me is fluff, it's total escapist," said the war game lover. "Your imagination becomes so involved that you become totally oblivious to the world around you."

He feels it is very relaxing, although some people tend to become more involved than others.

Erickson gave one example of how involved the players at Trinity Hall became. During finals quarter, he and other players played from 7 p.m. to 7 a.m.

Another charge brought against the game is its interference with school work.

Erickson said for some players, school does come second to the game, but feels most students have average grade point averages.

Erickson stated that in the Society of Wizards and Warriors, the "D and D" club on campus of which he is an officer, there are a few people that seem to live in this world of make-believe most of the time.

Are you interested in the engineering challenges of a dynamic manufacturing concern? If so, we may have just the position you're looking for.

By MARIA CASAS

Becky Bonsall ran in her first marathon in Oakland during Thanksgiving vacation. Her time was 3 hours and 50 minutes. On April 22 she might be running in the Boston Marathon.

"George is a shot-blocker, an agile player who depends on quickness and finesse. When he's in the middle, other teams have to think twice about driving. And when we need some more offense, we bring in Corzine. He can shoot, he's an excellent passer and he puts his body on people."

During high school Bonsall was on the track team but her time was not yet fully devoted to running. She was on the volleyball, field hockey, cross country, and gymnastics teams. Coming to Cal Poly she decided to join the volleyball team. She quit the team last summer.

"Running is a real big part of my life," said Bonsall. "I think about it all the time. It's what I want to do."

Qualifying for the Boston Marathon and improving her time at Irvine was very rewarding for Bonsall. Her family, who is very supportive of her running, had never seen her run in a marathon. Bonsall said it was exciting and special to share it with them.

Bonsall is also very thankful to friend, Gregor Robin, who she said, "is my inspiration and he totally motivates me to run.

"He taught me to see myself doing something. Winning. Accomplishing," said Bonsall. "Something was gained because I saw myself doing better."

Bonsall has not decided if she will compete in the Boston Marathon. There are so many other races she can run in.

"I will run the Boston Marathon someday," said Bonsall. "It doesn't have to be this year because I'll be running for the rest of my life."

When Bonsall does run in the Boston Marathon she will plan on winning and improving her time. If she does not win, knowing she tried her best will make her happy.

Alumni, pros featured on baseball schedule

Coach Berdy Harr's Cal Poly Mustang baseball team will start off the 1981 season by playing a team of Major League All-Stars some Mustang "oldtimers," and a team of Cal Poly pro alumni.

The Mustangs play against Jim Wohlford's Major League All-Stars this Saturday at San Luis Obispo Baseball Stadium at 11 a.m. Wohlford, an outfielder with the San Francisco giants, has gathered a team of Major Leaguers including teammates Jack Clark and Darrell Evans to play a benefit game for the Mustang baseball team.

The pros will be in town after having participated in a benefit golf tournament Wohlford has organized for Escuela del Rio, a school for the handicapped in Atascadero.

Cal Poly will play against a team of its baseball alumni Saturday, Feb. 7 in a doubleheader at noon. The "Oldtimers," as they have been dubbed for this game, will be comprised of former Cal Poly baseball players, many of whom still reside in the area.

The Central Coast baseball fans will be in for a special treat Sunday, Feb. 8 at 1 p.m. when the Mustangs host a team of Cal Poly Pro alumni, also at SLO Stadium. The team will be comprised of former Cal Poly players who have gone to play baseball professionally in either the minor or major leagues.

San Diego Padres outfielder Ozzie Smith is expected to be among the players participating that day.
END OF MONTH SPECIALS!

**ROTEL RX-604**

100 WATTS OF POWER AND BEAUTY
Rotel's beautiful RX-604 features 50 watts per channel of power with plenty of features for your expanding hi-fi needs. 2 year warranty included.

- **Dual power meters**
- **Subsonic filter controls feedback**
- **Radio signal strength for better tuning**
- **FM muting eliminates between station noise**
- **Hookup for 2 tape recorders**

**$199**

Coach hopes tournament will prepare volleyball for league

BY RON HUTCHERSON
Staff Writer

Men’s volleyball coach Mike Wilton feels that as his team matures it will be ready to challenge for the Western Collegiate Volleyball Conference championship when the chase begins in March.

“I expect to develop a young inexperienced team into one that can challenge for the league championship,” said Wilton.

March calendar

Start training now for the March 22 Bed Cross marathon, set for 7:30 a.m. Runners will meet at the corner of Meadow and Obispo at Meadow Park. For more information, call Rob Gordon at 544-5072.

With a starting team which consists of three freshmen, two juniors and a sophomore, Wilton said the main setback was that the players had not played as a unit long enough.

“It’s there, it’s coming on fast,” said Wilton of the ability of the youngsters to play together as a unit.

Wilton pointed out that they are trying to play a lot of matches so that the team will be able to gel before league play begins.

“One testing ground will be the C.U. Santa Barbara Tournament where Cal Poly will face, Long Beach State, U.S. International, U.C. Santa Clara, and the University of Southern California in pool play.

“That’s pretty good company,” said Wilton.

Wilton said Kent Terry was the leader on last year’s squad which has only one other returnee from last year’s team, Kelly Palmer.

The biggest positive points for the squad, according to Wilton, is that is loaded with good athletes, and that they have shown the ability to play together.

“There is an excellent team attitude. They’re exactly the kind of guys we are looking for. They’re here for an education and a career, not just to play volleyball,” said Wilton.

Wilton gave much of the credit of pulling the team together to assistant coach Lindsey Crow, who played for Cal Poly and was an All-American in 1979.

The league championship should be a dogfight between three teams according to Wilton: Cal State Northridge, who Cal Poly defeated in a tight battle earlier this season, U.S. International, which Cal Poly will face in the Santa Barbara Tournament, and his own Mustangs.

Cal Poly Mustang schedule

Thursday
Basketball: 7:30 p.m.—Arizona State at Cal Poly.

Friday
Basketball: 7:30 p.m.—Pepperdine at Cal Poly.
Swimming: 3 p.m.—Irvin women at Cal Poly.

Saturday
Swimming: 10 a.m.—San Diego at Cal Poly. Freestyle State meet at Cal Poly at 3 p.m.

Wilton said Scott Terry was the leader on last year’s squad which has only one other returnee from last year’s team, Kelly Palmer.

The biggest positive points for the squad, according to Wilton, is that is loaded with good athletes, and that they have shown the ability to play together.

“There is an excellent team attitude. They’re exactly the kind of guys we are looking for. They’re here for an education and a career, not just to play volleyball,” said Wilton.

Wilton gave much of the credit of pulling the team together to assistant coach Lindsey Crow, who played for Cal Poly and was an All-American in 1979.

The league championship should be a dogfight between three teams according to Wilton: Cal State Northridge, who Cal Poly defeated in a tight battle earlier this season, U.S. International, which Cal Poly will face in the Santa Barbara Tournament, and his own Mustangs.

It has been more than two years since a Cal Poly women’s swim team has lost to a Southern California Athletic Association opponent.

The Mustangs, under coach Katherine Barten, will put that string on the line this week as they host U.C. Irvine Friday at 3 p.m. and the University of San Diego on Saturday at 10 a.m.

Irvine, under first year coach Kaia Hedlund, should be strong in the freestyle events. The Anteaters are led by senior Karen Whilsmack and sophomore Lisa Dickey and Janet Channel.

Wilton pointed out that is is the ability of the youngsters to play together as a unit.

The senior from Santa Cruz has already qualified for the Division II national meet.

Valerie Young, Lori Botson, Sally Baldwin and Heather Davis, besides Taylor, have qualified in individual events, with Pam Miao and Ruth Cranston earning bids to the meet as part of a relay team.

Poly swimmers defend unbeaten league skin

It has been more than two years since a Cal Poly women’s swim team has lost to a Southern California Athletic Association opponent.

The Mustangs, under coach Katherine Barten, will put that string on the line this week as they host U.C. Irvine Friday at 3 p.m. and the University of San Diego on Saturday at 10 a.m.

Irvine, under first year coach Kaia Hedlund, should be strong in the freestyle events. The Anteaters are led by senior Karen Whilsmack and sophomore Lisa Dickey and Janet Channel.

Irvine has five excellent divers, including Beth Gerard who was a Pan-Am finalist and an AAU age group champion.

San Diego has only ten swimmers on the roster, but each are specialists in their events. Val Skufsca is San Diego’s top swimmer as she holds seven individual school records.

The Mustangs will be using the two meets to qualify for the AIAW national meet. Jody Jenkinson, a junior from Los Angeles, should be able to meet the national standard in the backstroke events and the 1,500-yard freestyle. Lori Thomson and Kelly Karrigan will be looking to make the qualifying time in the backstroke events.

The Mustangs will be looking for a strong performance from Sue Taylor in one and three-meter diving events. The senior from Santa Cruz has already qualified for the Division II national meet.

Nastase’s in Denver tourny

DENVER (AP) — Ilie Nastase, the unpredictable Romanian with a flair for controversy on the courts, has entered the 25-man field for the 1981 United Bank Tennis Classic in Denver, officials say.

The former U.S. Open and Grand Prix Masters champ will join defending United Bank champ Gene Mayer in the $175,000 event, to be held March 24 at the Denver Auditorium Arena.
Mustangs slip in polls

The only reason Cal Poly did not fall from the NCAA Division II basketball rankings into the "honorable mention" group this week was because the Division II Basketball Committee expanded the poll from a Top 15 to a Top 20.

Coach Ernie Wheeler's Mustangs dropped four notches to No. 18 this week after splitting its California Collegiate Athletic Association games, beating Chapman, 76-60, and losing to Dominguez Hills, 60-53.

Dominguez Hills swept its conference games, defeating Cal Poly and dropping Bakersfield, 70-67, to move into the No. 5 slot in the nation.

DIVISION II STANDINGS

1. Mt. St. Mary's 15-1
2. Wright State 14-2
4. Indiana State 14-3
5. Dominguez Hills 12-2
6. Central Florida 13-3
7. Central Missouri 12-3
8. Central Florida 12-3
9. Central Florida 12-3
10. Central Florida 12-3
11. Central Florida 12-3
12. Central Florida 12-3
13. Central Florida 12-3
14. Central Florida 12-3
15. Cal Poly SLO 13-4
16. Central Florida 12-3
17. Central Florida 12-3
18. Cal Poly SLO 12-3
19. Central Florida 12-3
20. Central Florida 12-3

Honorable mention: Bridgeport, Cal Poly Pomona, Central Connecticut, Clarion State, Eastern Montana, Elizabeth City, Lincoln, Mansfield State, Northern Michigan, Quinnipiac

The Cal Poly Mustang wrestling team will look to break a four-game losing streak as it hosts the No. 8-ranked Arizona State University. Leading the Mustangs will be heavyweight Paul Spieler (below). Spieler has won two of his last four bouts for a 6-2 dual meet record.

Mustang wrestlers host Arizona State

Cal Poly will host Arizona State tonight at 8 p.m. in the Mustangs' last regular-season home date of the season. The match will be in the university's main gym.

The Mustangs of Coach Vaughan Hitchcock, ranked ninth in the latest poll by the Amateur Wrestling News, will take on No. 8 Arizona State with two of the Sun Devil wrestlers individually ranked.

Gary Bohay, a junior from Fountain Valley, is ranked third in the nation at 126 pounds while heavyweight Dan Severn, a senior from New Lothrop, Mich., is rated third. Bohay is 16-0-1 this season and Severn is 20-2.

Bohay figures to go against Mike Barfuss of Cal Poly while Severn should draw Mustang heavyweight Paul Spieler. Other Sun Devils with impressive records include 134-pound Tom Riles at 1-2 and 158-pound Chris Bodine at 14-2. Joe Solorio (l.O) is expected to wrestle at 142 in place of Harlan Kistler (14-4). Kistler — last season's NCAA runner-up at 134 pounds — has a knee injury which will probably sideline him for the remainder of the season.

Platoon system solves San Antonio pivot woes

From page 10

Johnson was signed as a veteran free agent in August after completing his contractual obligations with New Jersey. Both clubs offered the same money, but the Nets offered only a two-year contract while the Spurs guaranteed Johnson three years. As compensation, San Antonio gave New Jersey its 1981 first-round draft choice, which will turn out to be one of the late No. 1 picks in view of San Antonio pivot woes. As compensation, San Antonio gave New Jersey its 1981 first-round draft choice, which will turn out to be one of the late No. 1 picks in view of San Antonio pivot woes.

Corzine, a second-team All-American at DePaul, was the Washington Bullets' first-round draft choice in 1978 and the heir apparent to Wes Unseld. But for the next two years, he hardly got off the bench, and with Unseld still going strong, the Bullets were happy to unload Corzine on San Antonio for two second-round draft choices.

"We stole Corzine for two No. 2s and got Johnson for a No. 1 that will turn out to be low," said Albeck. "You can't hope to do much better than that."

The two centers are an intriguing contrast. Both are 6-foot-11, but after that the similarity ends. Johnson is 32 years old, Corzine is 24. Johnson is lean and angular, Corzine is wide and muscular. Johnson is black, Corzine is white. Johnson is a veteran of nine pro seasons, Corzine is just beginning to feel his way around the NBA.

One historical note: In 1975, Johnson also shared playing time at center with a muscular pivotman in the Corzine mold, Clifford Ray. That was with the Golden State Warriors, who won the NBA championship.

Mustang wrestlers host No. 8-ranked ASU

From page 13

The Mustangs were shut out, 46-0, by powerhouse Iowa Tuesday night. The Mustangs lost to Iowa State, 31-9, Northern Iowa, 19-17, and San Jose State, 20-16, all within a week.

The road-weary Mustangs will be led by Spieler with a 6-2 dual meet record and Louis Montano and Mike Barfuss who both boast 7-3 dual meet marks.

The Cal Poly wrestling team has stumbled upon rough times. Tonight it will look to snap a four-game losing skid. Poly's 167-pound wrestler Tim Vaughn (left) survived a bite from his San Jose opponent to post a win. Vaughn carries a 4-2 record against Arizona State. The match begins at 8 p.m.

Heavy blow

A series of votes earlier this week by the pro-development majority of the San Luis Obispo City Council has dealt a heavy blow to those with high hopes for the future of our community.

The Monday noon session brought several amendments to the city's General Plan—the outline broadly defining planning goals, which zoning ordinances interpret and enforce—all of which are disheartening to the character, environment and quality of life here:

— a resolution to expand the urban reserve line, which marks the expected limit of the city's growth, to include 110 acres of land in the south mountain before standards have been set, before we know if there are adequate water and sewer services to the area, and before we know the costs of modifying the Marsh Street interchange to accommodate the expected traffic increase— all surely are signs of poor planning.

— a resolution which could make it easier to develop more than 1,000 acres of rural land near the county's airport for industrial use. This will cause much more air pollution, water shortages, greatly aggravated housing and traffic problems and turn San Luis Obispo into a factory town. Also, attracting several thousand and more people to the area in search of jobs is a ludicrous thing to do when the present housing supply cannot support the existing population and employment base.

— a resolution that paves the way for the demolition of rental housing in the 1130 to 1162 block of Walnut St. and in the 625 to 643 block of Toro St. And in their place? Yet another motel and more tourist facilities. To destroy housing in favor of tourist-related businesses not only denies the seriousness of the housing crunch and the problems of those reliant on rentals, but creates a spiraling demand to convert even more housing tourist facilities.

These ill-thought resolutions take effect in 28 days, which days hopefully will not be wasted.

City council candidates Melanie Billig, Allen Settle and Glenna Deane Dovesy plan a petition drive to put the planning policies before the voters in a referendum. They have until Feb. 25 to present about 3,300 signatures to the city clerk to qualify their challenge of the council's actions for a special ballot. It's too late for the referendum to be included on the ballot in the March 3 municipal elections. If the petition drive succeeds, the council will consider whether to reverse its actions or schedule such a special election.

The Mustang Daily editorial board applauds the efforts of these three far-sighted citizens who evidently care more for the quality of life and environment of our area than the majority of our city council. Those interested in circulating petitions may pick up and deliver them at Stuart and Shaw, 981 Osos St. no later than Feb. 23.

Title Nine article biased and misleading

Editor:

Wednesday's front page article about Cal Poly's Title IX compliance presents a biased and slanted view of the true situation at Cal Poly. Cynthia Barakatt did not prepare the whole story.

The headline "Students complain about 'widespread' inequities" is false and misleading. The article does not give any examples of student's complaints, nor are any inequities substantiated by an authoritative source.

Why could the article be held until Dr. Vic Buccola was able to comment? The story that was printed was not so substantive that it couldn't be held until complete facts were available.

Barakatt claims Lorene Yoshihara says there is inequity between men's and women's locker facilities. Unfortunately, due to the original construction of the gymnasium, it was impossible to turn the men's bathroom into a women's facility when extensive remodeling was done a few years ago. The efforts of the Sports Information office on campus to accommodate the athletic program say Title IX compliance is coming too slow at Cal Poly.

In addition, it is more likely the increased coverage in the Telegram Tribune is due more to a change in sports' editors than anything in Cal Poly has done.

With regard to scholarship funds, Title IX deals with the amount of money spent, not the nature of the housing market in San Luis Obispo.

Barakatt also reported a complaint by Volleyball Coach Mike Wilton that his team didn't have warm-up suits, unlike other teams at the National Championships. If Barakatt had checked, she would have learned that Wilton never requested the item.

Barakatt also says "some people" in the athletic program say Title IX compliance is coming too slow at Cal Poly. Who says Cal Poly isn't in compliance? We should not be complacent.

Gary Martin
