

Modular Utility Rack & Accessory Line

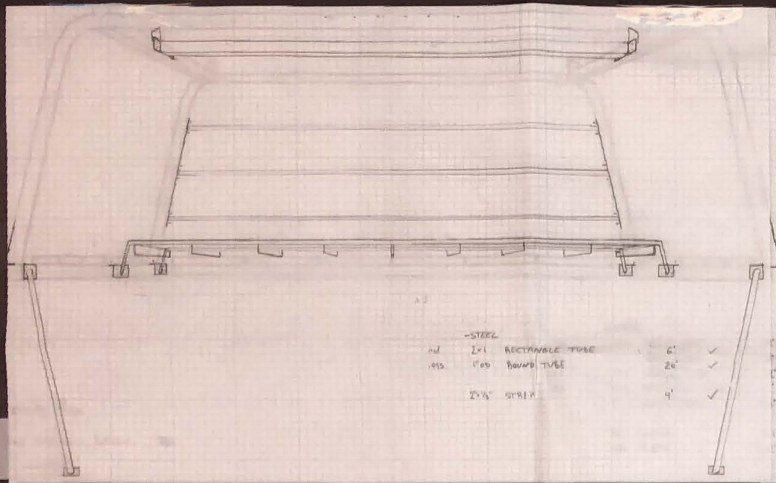

There is a large gap in the market for heavy duty work racks for fleet vehicles. Modular racks have recently been introduced to the industry allowing contractors the ability to customize them to their needs. However, all customizable racks are limited to lightweight applications. The high strength steel rack I have designed is both modular, and sturdy enough to handle up to an estimated one thousand pounds. On our website, contractors will be able to scroll through the available attachments for his make and model rack and view them built on to his vehicle in 3D computer generated graphics.
