

## Pismo Beach Lion's Club Sidewalk Replacement Project

The objective of this senior project was to provide a long lasting and safe sidewalk for all the people that attend the Lions Club for future events. The idea came to be after talking to Karen Walsh, and how many previous visitors had tripped and fallen from the uneven sidewalk. The sidewalk was originally poured over 30+ years ago, and it was time for a newly built pathway. The project involved creating an estimate, schedule and coordinating with the club to see the project all the way through. The new sidewalk is now built stronger than ever before and is now reinforced with concrete Ramesh which will help with cracks in the future. The sidewalk is now suitable for any events being hosted at the Lions Club and there will be no need to worry about an uneven and cracked pathway.
