# LOS ANGELES HOMELESSNESS EPIDEMIC – AN ANALYSIS OF PROPOSITION HHH

## Abstract

Passed in 2016, Proposition HHH is a \$1.2 billion bill hoping to curb the homelessness epidemic that is rising in the city of Los Angeles with the newly added construction of 10,000 supportive housing units. This study serves to analyze and detail the homelessness epidemic in the Los Angeles Area, familiarizes the reader with how Proposition HHH funding works together with developers, as well as some of its shortcomings to date so far. To garner additional research, a survey was performed with a sample size from both the developers engaged with Proposition HHH and residents of the product in order to gauge how effective the bill has been in tackling the overall issue of homelessness. This survey looks to gather quantitative data from a series of 6 questions asked from 20 developers and 20 residents. A multitude of developers were surveyed from the preconstruction, construction, and completed construction phases of their individual projects. The survey establishes the fact that Proposition HHH has fallen short of its 10,000 unit goal and adjustments need to be made.

**Key Words:** Los Angeles, Homelessness, Supportive Housing, Proposition HHH, Public Policy

Cost Breakdown of HHH-Funded Project

## WHAT WAS THE MOST CHALLENGING ASPECT OF THE CONSTRUCTION PROJECT?
