

San Luis Obispo Botanical Garden Concrete Benches

Anthony Masarweh

California Polytechnic State University, San Luis Obispo

Key Words: Concrete, Formwork, Benches, Foam Insulation, Rebar

This senior project consists of a team of six Cal Poly Construction Management undergraduates building a total of ten concrete benches for the non-profit San Luis Obispo Botanical Garden. Our team was responsible for the design, construction and installation of these benches. This site will be used as a venue for a variety of events and the botanical garden, including classes and even weddings. This project turned out to be a success, through many obstacles and lessons learned. This project gave us exposure to all aspects of the construction process, even though each individual had distinct duties and obligations.
