## Bridge Rebuild

Anthony Flores

The San Luis Obispo Botanical Garden's entrance was recently relocated. The old entrance was a bridge used by staff, volunteers, and visitors alike. This project's goal was to rebuild the rotting utility bridge to be used by the facilities staff and volunteers. One student acted as the designer, performed the preconstruction work, and constructed the bridge. Design and preconstruction were done prior to plans being approved and material procurement. Deconstruction and construction were focused on building on-time, within budget, and to plan. This poster displays the before and after of the bridge rebuild.
