

CAL POLY AVOCADO ROOTSTOCK TRIAL

Cal Poly's Horticulture and Crop Science Department is facilitating an avocado rootstock trial taking place on Radio Tower. The goal of the trial is to find a rootstock that could potentially be resistant to the *Phytophthora cinnamomi* pathogen which causes the root rot disease in avocados. Positive results in the trial could improve CA avocado production and help understand the pathogen better. Read more on it from an article on the Ag Circle Blog by scanning the QR Code!
