CPT-Based Liquefaction Field Case Histories from the 1995 Hyogoken-Nambu (Kobe) Earthquake, Japan

by

Y. Suzuki, K. Tokimatsu, R.E.S. Moss, R.B. Seed, and R.E. Kayen

A report on research sponsored by the Kajima Corporation, California Department of Transportation (CalTrans), the California Energy Commission (CEC), and Pacific Gas and Electric Company (PG&E) through the Pacific Earthquake Engineering Research Center’s (PEER) Lifelines Program, Task 3D02

Geotechnical Engineering Research Report No. UCB/GE-2003/03

Introduction

This report documents CPT-based field case histories from the 1995 Hyogoken-Nambu (Kobe) Earthquake in Japan. These case histories are proprietary and were acquired by Mr. Y. Suzuki of the Kajima Corporation under the supervision of Prof. K. Tokimatsu of Tokyo Institute of Technology.

Each case history is composed of two pages, one page of vital statistics and one page showing the CPT trace with the assumed critical layer delineated. Field performance of each site was assessed by Mr. Y. Suzuki as well as the performance assessments published in Akai et al. (1995).

The liquefaction and non-liquefaction data that were used in the subsequent liquefaction triggering analysis (Moss, 2003) are summarized in the accompanying Table 1. Figure 1 is a map of the greater Kobe Port region that shows the approximate locations of these CPT field case history sites (which have a three letter designation corresponding to the trace), superimposed over SPT field case history sites (which have number designation corresponding to the log) and PGA contours, the latter two are from Cetin et al. (2000).

This report is intended only as a compilation of the Hyogoken-Nambu (Kobe) data, details on interpretation and processing of the data are presented in Moss (2003).
Acknowledgements

The acquisition of CPT data was funded by the Kajima Corporation, and this support is gratefully acknowledged. The processing and compilation of the data was funded by the NSF-sponsored Pacific Earthquake Engineering Research Center (PEER) Lifelines Program via California Department of Transportation, the California Energy Commission, and Pacific Gas and Electric, under PEER Lifelines Task 3D02, and this support is gratefully acknowledged.

Earthquake: 1995 Hyogoken-Nambu (Kobe), Japan
Magnitude: $M_w=7.2$
Location: Sankyu Delivery Center
Nature of Failure: Liquefaction

Comments: Omitted from Subsequent Liquefaction Triggering Analysis (Moss, 2003)

### Summary of Data:

#### Stress
- Liquefied Data Class
- Critical Layer (m) st.dev.
- Median Depth (m) st.dev.
- Depth to GWT (m) st.dev.
- $\sigma_v$ (kPa) st.dev.
- $\sigma_v'$ (kPa) st.dev.
- $a_{\text{max}}$ (g) st.dev.
- $r_d$ st.dev.
- $M_w$ st.dev.
- $C_{\text{SR}}$ st.dev.

#### Strength
- Soil Class
- $D_{50}$ (mm)
- %Fines
- %PI
- $q_c$ (MPa) st.dev.
- $f_s$ (kPa) st.dev.
- norm. exp.
- $C_q, C_l$
- $C_{\text{thin}}$
- $f_{s1}$ (kPa) st.dev.
- $q_{c1}$ (MPa) st.dev.
- $R_{f1}$ (%) st.dev.

\[ \text{C.O.V.}_{CSR} \]
Earthquake: 1995 Hyogoken-Nambu (Kobe), Japan
Magnitude: \( M_W = 7.2 \)
Location: Sumiyoshi Elementary School
Nature of Failure: No Liquefaction

Comments:

- Estimated \( a_{\text{max}} = 0.5 - 0.7 \) from contour map
- Nearest Cetin (2000) SPT 31 & 28
- Crit. Depth correlates with SPT 31
