Welcome to the School With a Future
Life starts anew at Poly as the winter quarter brings some 50 new comers here. So it is time again to welcome these incoming men to Cal Poly.
Our school might well be called "the school with a future," for in every sense of the word we are a school with a future. We have only begun to grow. Materially, we are one of the most fortunate colleges in the country.
A great number of schools can boast of large and beautiful campuses, but few can say they possess two such campuses in opposite ends of their state. We can.
Moreover, in every fact that they have a distinguished faculty. At Cal Poly we are proud of our faculty. Every instructor is an expert in his own particular field, and yet we have one of these faculty for every 15 students.
Now with the expected coming of a B. S. degree to Poly, we are taking our largest step toward the goal every Polyteer is urging his school to make. That goal is not alone to be a good four year college, but set down on two pretty campuses and watched over by a faculty envied by any school. No, it's more than that. It is to be respected by the citizens of this state and other colleges whose ideals are as high as our own.—Don Carlson.

The Danger Spot of the Campus
Hundred of California State Polytechnic students and faculty members, as well as residents of the California Park area south of the campus, are subjected to a needless risk at the Hathaway grade crossing.

There are about 300 cars on the campus belonging to students alone. There are 50 or more vehicles of instructors and administrative employees that are used every day as a means of transportation to and from school. There are many commercial vehicles that serve the student body and industry on the campus. Then, too, there are scores of residents of the area on the north side of the tracks. All of these vehicles cross the tracks at Hathaway at least twice a day in some cases and in and from the school.
Without doubt the Hathaway crossing bears the heaviest traffic of any grade crossing in San Luis Obispo county. As it is now the conditions at this crossing are definitely dangerous.

One significant reason for this unsafe condition is the angle of the track and the roadway. In order for a driver to see both directions on the track it is necessary for him to turn his head almost 90 degrees to the track and the roadway. In order for a driver to see both directions on the track it is necessary for him to turn his head almost 90 degrees to the track and the roadway. In order for a driver to see both directions on the track it is necessary for him to turn his head almost 90 degrees to the track and the roadway. In order for a driver to see both directions on the track it is necessary for him to turn his head almost 90 degrees to the track and the roadway. In order for a driver to see both directions on the track it is necessary for him to turn his head almost 90 degrees to the track and the roadway.

To make matters worse, even the most careful driver is handicapped by the fact that the instructors have yet to pass a permit.,

The next game here will be at Volunteer night with the Boulevard Clovers—oh boy! What a fight! Those Broadway boys are handsome, but oh boy! A quarter to see them is a quarter well spent.

The fresh men are being welcomed very nicely by the staff. I'd like to say something in the paper's behalf.

The teacher, like all other school institutions, is in its own hands. The school and its staff will be judged by its results and for improvement.

Let us always think of the future. About things to be done, not what was done. On the other hand,new and old...Everyone.

Robert B. It's on the program.

We'll say again:

Let's hear from you.

Student Pilots Take Exams; Flight Well Delayed
No student pilots took exams at Cal Poly this week because of the flight delay. The exam was brought in order to comply with the regulations of the Civil Aeronautics Administration.

The first exams on the courses being taught in the Cal. A. Flight training program were given this week. The students who are taking the exam were given the tests on Monday and Tuesday.

The flight delays will continue until the tests are taken Monday and Tuesday. The flight training course bought the insurance required by the course Thursday night.

**Alumni News**

**Mark of 441 Pounds per Cow Exceeds California Average by 80 per Cent**

A new butterfat record for San Luis Obispo county was set by the dairy herd at California State Polytechnic during 1939, according to the State Dairy Committee. The new mark was 84 pounds per cent, which is 80 per cent higher than the state average. The dairy herd at Cal Poly is owned by students.

**New Lampshade Designed Here**

A new design of a lampshade is being used to good effect on the Poly campus to eliminate glare and aid to lighting conditions now being used at the central administration building. Arnold Alvey, head of the industrial department, who has an experimental section of the new shade made up, says that with the new shade he will be able to satisfy the requirements of from 10 to 100 feet of light evenly over a larger area. When the new shade is put into production, Alvey says that it will be able to cut down ship on the heavy tension and other types of lamps used in most lighting systems.

**Easter Lambing Begins; Progress Rapid on Building**

Lambing for the Easter market is in progress at California State Polytechnic this month as most animal husbandry students looked forward to completion of the new $10,000 sheep unit during the winter quarter.

While the outside work continued, work is proceeding rapidly on construction of frame and stucco design for accommodations for nearly 600 sheep according to John Fleischhacker, instructor. Eight different pens where lambs may be set out are being built.

Will Permit Increased Activity

"The new shed will give us an excellent layout," Fleischhacker commented, "and a real opportunity to increase sheep work. It is an ideal setup for feeding and breeding."

Animals students have had no centralized housing for their sheep projects.

The new shed includes a barn that is 60 by 74 feet, a hay loft, and a project shed that is 60 by 200 feet, in the barn will be facilities for meat packing, feeding pens, a feed room, wool packing cells, and rooms for housing sheep during the winter quarter.

Work Completed in March

When the building is completed it is expected to accommodate up to 150 sheep. The building will be used in the future for the new $50,000 air conditioning facilities on the campus. The building has been almost completed. The ewe will not be completed until spring.

**Newt Year in Improvements to Campus Buildings, Roads**

During the coming year, considerable work will be done on buildings, roads, and other parts of the state. One of the buildings to be completed this year will be the new $50,000 air conditioning and heating building. The building will be used for training building. Potts will be a member of the class of '48.

Mr. and Mrs. Harry Whitley and daughter of San Luis Obispo visit friends in Santa Monica. Whitley left for Poly last week.

Edith Burchel, a member of the Poly class of '48, will enter the University of Minnesota this spring, according to friends. She has been living in Los Angeles.

Frank Burnett and his family were campus visitors during the holidays. Burnett, a member of the '10 and '11 classes, is employed in the San Francisco area for the federal government.

Polytechnic.

Dr. McPheeters left San Luis Obispo Tuesday night to attend the convocation meeting of the school for the Polytechnic alumni at the Colusa College of Agriculture at Davis. About 150 representatives from California attended the meeting.
