Morosi Wins Honors For Poly at San Jose

Although Cal Poly's hoop team came back from the recent San Jose State College basketball tourney with the ladder with four losses, one win and one tie, it was not gloom among the Mottmen as Poly's ex-olymer from Brooklyn, Hank Morosi, was named "most valuable player" of the three-day cage tourney. Morosi, playing the same fine defense and offensive game as on the courts at Fresno State, College of San Jose State, Santa Barbara, San Francisco State and Chico, but rather his fast-ball-handling ability and teamwork. Coach Peabody of Cal Poly was pleased with his squad's team play and the battle of the men, which was the only thing that kept Poly in the game. Morosi, who is a senior and a Chico girl, was sent to high school here.

The conference opened Monday at 2 p.m. with a broadcast over the regular 110 volt circuit from the public health wing of the beef unit. The board will be asked to consider and report the following: the terms and conditions of the new semester, the public health wing of the beef unit, and the control of the new school.
Spectator Sportsmanship

When anyone judges a college he usually relies heavily on an intangible concept of that institution which is called the reputation of the college. Reputation is difficult to define but it is a very real part of the school. A college's reputation is not static. It can be improved, a slow process, it can be torn down, a very rapid process. Nothing which concerns the college or its personnel changes a balance with the college's reputation.

One of the items that bulks largest in the overall reputation of any college is its reputation for fair play. Good sportsmanship includes the attitudes of the players, the coaches and the spectators.

However, identifying “good sportsmanship” at basketball games are probably the ones who can do more to tear down the reputation of any other sports, because the spectators. Probably this is true because of the closeness of the spectators to the players and also the personal contact that can come with watching any game, the individual voices of the spectators can more easily be heard.

At any rate, the fact remains that the spectators who group together in our gym to watch the Mustangs take on the Cougars, are the ones who are going to be seen as havingPosterize good sportsmanship as well as having good basketball teams.

Good sportmanship for the spectators at basketball games requires that every one be quiet when another is speaking and that a free throw, that opponents and officials be treated courteously. Another part of good spectatorship is to keep the teams on the floor. Every spectator wants his team to win. But winning a game is hardly as important as the attitude of the players, the coaches and the spectators.

Let's remember that Poly has a good reputation and that we should do our best to see that it remains in good condition.

The Kick of the Mustang

By Rosalie F. Lipschitz

Editorial

Several things happened to me this past Christmas which quite overwhelmed me. It seems that nearly everyone begins to think of the new year and to set his goals for the new year. It seems that everyone has a litmus test for himself.

Welcome back to the fold dear students. I hope that big hats and new shoes have brought you ever closer to your goals. Here you are, practicing another sport.

I think I have never quit this newspaper racket. Lee isn't the first Mustang man to get hooked by some alien in the business. New papers are being started all the time.

I am told the story that "Margie Dead" isn't built for running. It seems that she nearly missed being in last night. The best opposite contender, competing for the title of the year, that's the way.

Pat told me that Miss Marvin was in the annual Christmas show at the post Christmas. By hearing she claims and the other must say that she is good. If the beautiful ladies and the other must say, she is good. If the beautiful ladies and the other must say, she is good, I am told the story.

Deer John:

I know I am getting this letter pronto but I am always happy to hear from you when I am no longer in your life. I am in your life. I am in your life.

Leach recovering

The many friends of Dick Leach are happy to hear that he is recovering very rapidly from his operation. Leach underwent the operation Tuesday at the Los Angeles General Hospital. Although he is making excellent progress, it will be some weeks before he is able to return to his teaching duties for several weeks.

Dear John,

There are three important items which I have been thinking about this past week. First, it is really cold and second, it is really cold. I am always happy to hear that you have been thinking about this past week. I am always happy to hear that you have been thinking about this past week.

Ed. Note: It is all probability there is some

Dear John

Harry Stanfield, the former basketball player, is due for his next operation in a couple of weeks. He is looking forward to it with great enthusiasm.

Dear Harry:

I am always happy to hear that you are recovering very rapidly from your operation. I am always happy to hear that you are recovering very rapidly from your operation. I am always happy to hear that you are recovering very rapidly from your operation.

Ed. Note: It is all probability there is some

Man & Beast

Must Fight

Some Diseases

Among the important infectious diseases transmissible from animals to man are tuberculosis, tularemia and rabies. In order to preserve the health of the campus, the Student Body President has charged the student body, faculty members, staff members and the Student Body's Student Body's Health Fund with the task of informing the students and the faculty about the following:

1. Tuberculosis, which causes undue loss of human life and is transmitted from infections with tubercle bacilli. It affects the body's lungs and throat and can result in severe illness.
2. Tularemia, which affects only wild and domestic animals but causes severe sickness and death in such animals. It is transmitted by the bite of an infected animal and is fatal in 100 percent of infected humans.
3. Rabies, which affects not only wild and domestic animals but can strike humans and other wild animals as well. It is transmitted by the bite of an infected animal and is fatal in 100 percent of infected humans.

Public Health

An important function of public health is to prevent diseases in animals which affect the well-being of the human body.

A disease was brought into this country through the purchase of infected animals and was transmitted to pigeons. This transmissible respiratory disease of the pigeon has killed thousands of pigeons in the city of Los Angeles. It is transmitted by the bite of a diseased pigeon and can be prevented but not cured. Health officials hope that the present treatment will prevent any further spread of the disease.

Rubella, a contagious childhood disease among children who have not been vaccinated against rubella, is on the increase in the United States. The disease is spread by the respiratory tract and is not transmitted from infected persons to their offspring. It is primarily transmitted from infected persons to their offspring. It is primarily transmitted from infected persons to their offspring.

The red and white flag is a symbol of victory and health. It is flown to indicate freedom from disease and to promote public health.

**Gaucho Confident of Win Over Mustangs Friday**

SANTA BARBARA, Calif. Jan. 9—Opening their California Collegiate Athletic Association schedule, the Santa Barbara Gauchos tamed the Cal Poly Cagers, 56-40, Saturday night at San Luis Obispo and Fremont State the following night at San Luis Obispo.

Although the Gauchos will be favored in the remaining games, close battles can be expected. The Gauchos won their last six games, for example, while Santa Barbara scored a 51-48 win over Cal Poly last week and a 14-10 victory over Fremont.

Poly was the third highest scoring team in the clinic with 137 points compared with 110 for Santa Barbara. Hank Moskovic, who was selected the outstanding player of the tournament, led the Mustangs with 30 points for his team in individual scoring. Roland Talbot, Cal Poly guard, made the Clinic Most Valuable Player.

**Poly Rolls, Elect Conley As President**

By BILL SMITH

The Gauchos moved Cal Poly Bowling League first after the games last Monday to start the bowling conference. Bob Conley was selected president; R. O. Smith, secretary; V. E. Stewart, treasurer; and J. D. Hubler and Dan Flippen volunteered to act as captains.

Next Monday night a game will be given for the championship of the evening games. The Gauchos have been defeated by the Mustangs in two of the eight games to date. The standings will be updated for further information.

The high game for the last Monday was rolled down by Dixie of the Crops club, with a 191. The high string was thrown by Pierce from the Tort club rollers with a 128 string.

R.I.O.

WHAT OUTFIT?"

The compelling question asked of students at the recent San Diego Invitational Clinic, but Coach Hal Besty has expressed belief the Mustangs will prove more effective over a full game even than in the 20-minute contest featured in the clinic. The Mustangs have won four of five regular games so far this season.

The Gauchos have won six of their eight games to date. The Gauchos are opened by diminutive Leroy Hal, an All-American guard in 1943, who scored 214 points in that year. Statler, a guard with a deadly eye, is a cool, heady floor leader as well. Willie Isles, national broad jump champion and one of the first stringer for the Gauchos.

The Gauchos and the Mustangs control the conference and will play two conferences this year, the Gauchos winning last year’s conference with a 12-game lead over two conference opponents, whereas the Gauchos are first in the standings with 11 games completed, and the Mustangs are second.

State Official Warns of 'Hooft and Moutch' Germ

Some two hundred California veterinarians and nineteen state agricultural agents are now on the alert for signs of a possible outbreak of "Hooft and Moutch" disease. The warning came from Dr. A. E. L. Muste's recent visit to Europe, where the disease was prevalent.

Dr. Karr, state veterinarian of the University of California, reported to the board of supervisors that the disease had broken out recently at the University and that many of the animals had been infected. He described the disease to the board as a very serious one, and warned against its spread.

The disease, which is known as "Hooft and Moutch," is caused by a germ that attacks the digestive system of livestock. It causes a great loss of appetite and a great deal of death and destruction of stock.

Dr. Karr said that the disease had been reported in California in the past, but had been under control. He warned that the disease could be spread by infected animals moving from region to region.

The disease is spread by flies, which carry the germ from one animal to another. It is spread by the flies' contact with the diseased animal. It is transmitted from the flies to the healthy animal by the flies' saliva, which contains the germ.

The disease is usually spread by flies that have fed on an infected animal.

The disease is very difficult to control, and there is no known cure for it. The only way to control it is to keep the flies from coming into contact with the diseased animal. This can be done by keeping the flies away from the infected animal, or by killing the flies that are in contact with it.
