South African plants in bloom at arboretum

Facility and staff members who can't make the long trip to South Africa can still experience the beauty of that nation's flora at the campus's Leasing Pine Arboretum.

Brilliantly colored flowers native to South Africa are in full glory during April and May, according to Tom Elstroth, director of the arboretum.

In addition to the South African garden, visitors can tour the arboretum's Australian garden, Mediterranean garden, Californian garden, and a collection of palms and colorful aloes.

The South African garden, located at the east end of the arboretum, features a sloping bank nearly 400 feet long covered with flowering succulent mesembryanthemums in a "riotous array of colors," Elstroth says.

Punctuating the "mesem" bank are other South African native plants, including orange and yellow kniphofias, succulent aloes, succulent mesembryanthemums, and a mix of unusual grass-like rests.

"Acrobatic hummingbirds flit among the many plants of South African fuchsia soid with tubular pink, red and purplish flowers," Elstroth said.
