Your stars are mine

By JOHN FITZRANDOLPH

David," Joan's enchanting name to her poetish husband in a poem I wrote, "The stars in your sky are the stars in mine and both poisons of this life are we...

She's both poetically and politically accurate, I was telling Cyprus. He was cleaning his front paws. People share the stars, I went on, but the facts of who people are, chain them to themselves. Because people are locked within their own lives, they perceive the stars and chains from individual vantage points; people taking wholly to their self-policed perceptions.

Not very profound, I told the cat. The sun was coming up about then. Cyprus cared nothing for poetry-he whined and I let him out as I left to get the morning's Chronicle.

On page 4 of the Chronicle I began my transition from romance to politics-I had long since left peace.

Even State Senator Donald Grunsky (Rep-Watsonville) is tied to the dogma of his own insights and beliefs. I thought, reading a marijuana story, Back lyrics still in mind.

Grunsky is chairman of the Legislature's Joint Committee on Marijuana. The committee's report was introduced in late April by Assemblyman Richard E. Miller, a registered Republican who said marijuana use had "settled down" to "the level of the 1960s."

"When we got the report," Grunsky said, "we had a big battle, because people are locked into their own lives, they perceive the stars and chains from individual vantage points; people taking wholly to their self-policed perceptions.

"The sun was coming up about then. Cyprus cared nothing for poetry-he whined and I let him out as I left to get the morning's Chronicle.

On page 4 of the Chronicle I began my transition from romance to politics-I had long since left peace.

Engineering department gets five new profs

A research scientist for the U.S. Army Aeronautical Research Laboratory at Moffett Field since 1960, Dr. Rudland will join the faculty of the Aeronautics and Engineering Department. He is a graduate of Georgia Institute of Technology, where he earned his doctorate and two other degrees. Dr. Sennett, a member of the University of California at Santa Barbara faculty since 1988, will assume teaching duties in the Aeronautics and Engineering Department. He graduated from the University of Pennsylvania, which has granted him three degrees including his doctorate.

Robert A. Wysock, an alumnus of this college, will join the faculty of the Industrial Technology Department. He earned his master's degree at Fresno State College and has been a graduate assistant instructor while studying for his doctorate's degree at Utah State University for the past year.

The names of five new members of the faculty of the School of Engineering and Technology have been announced.

Dr. Fabricius, who will join the faculty of the Electronic Engineering Department, has been an associate professor at Rochester Institute of Technology in New York for the past two years. He is a graduate of the University of Missouri at Rolla and New College of Engineering in New Jersey from which he received his doctor's degree.

Joining the Electrical Engineering Department teaching staff after having been on the faculty at University of Miami in Florida most recently is Dr. Goldber. He received his doctor's degree from the University of Florida and is also a graduate of Fairleigh Dickinson University in New Jersey.

A childhood tale

by CAROL BOWARDS

All day the children run outside in the sun. They are skinny and alert with summer. They don't love them and only scold me if I let them see it. Everyone is hated by all students and followers of wisdom. He tried to hate me and I kept close on his heels when they were. What does it all mean? Are they looking on me as an overgrown child? Oh, but I have been set free. For the first time in a long time I can't feel their feelings. The child then leaves me but I find he also leaves the magic. But I know my transformation is not complete when I start worrying about how to keep it. It's already lost its spell.

Power outage

Dig out your candles gang the lights are going out! According to Chief of Plant Operations on campus, Robert R. Adams, the outage due to occur 5 a.m. to 6 p.m. Sept. 1, 2 and 5 on lower campus, will come about because construction men must complete work in several electrical manholes in that area.

CAROL SO WARD

I know I love them and, only one of three.

I know, I'm sure I'm soon going to be asking to kiss them instead. And I know it can't be in the dear way George did, but only with shyness and embarrassment.

State College Chancellor Glenn E. Dumke has expressed concern over the Los Angeles hearings of the President's Commission on Campus Unrest.

"It appears that the Commission has largely overlooked, again with few exceptions, those institutions and systems like the California State Colleges which by firm, reasonable, consistent and successful policies, have done much to warrant restoration of the public's confidence."

But my roomates, what are they going to think of the steady influx of kids into the apartment? They are starting to knock on the door and run out right asking for money, the phone and cigarettes. (Incidentally, when they do use the phone I have heard this apartment referred to as Laguna Lake. Terry's house, Terry's house, the drug store. Magic, yes, but this is beyond psychic powers.)

My day is long and lonely and it is only good to me, but I am only one of three.

I know, I'm sure I'm soon going to be asking to kiss them instead. And I know it can't be in the dear way George did, but only with shyness and embarrassment.

Speedway provides thrills
by RALPH ALLEN

The first time that the cars came around the track was not tight enough for a start. After one more lap, the eight cars were off in the first heat of the super-modified division.

The above event is typical of the racing which occurs from May to September at the Atascadero Speedway.

According to Robert Elliott and William Jewell, operators of the super-modifieds are allowed to use an unlimited number of carburetors and are permitted to use airfoils on the roofs of their cars to improve their acceleration and cornering. The limited cars may use only one two-barrel carburetor and are not allowed to use airfoils.

When asked about the safety precautions at the track, Elliott replied, “The cars are basically designed to meet N.A.S.C.A.R. specifications. The driver’s compartment is surrounded with one and one-half inch steel pipe and he is protected by safety belts and his helmet. An ambulance is stationed in the pits, also.”

In the past, according to Elliott, such drivers as George Schneider and Bill Vuchovich Jr., who have recently competed in the Indianapolis 500, and Dick Brooks, a top Grand National Circuit driver, have raced at the Atascadero Speedway. The purse for the night is usually $800 to $700. This is divided up between racers who make their living as salesmen, mechanics, nurses, farmers and truck drivers during the week.

Jewell concluded, “The success of our speedway has been through the community, for they are the true operators of the track. Without the donation of the ambulance, tow trucks and welding trucks and the tremendous contributions of the area residents, Atascadero Speedway could not exist.”

Staff finds home woes

New members of the faculty and staff are experiencing trouble in finding housing in the San Luis Obispo area, according to the director of personnel relations, Larry R. Voss.

Voss said many members of the faculty who will begin their jobs next month are having difficulty in locating houses, apartments, and duplexes for rent.

Voss made a request of persons who have home rentals available in any area within commuting distance of the college to list them with the Personnel Office, either by telephoning 948-3236 or by visiting the office in the Administration building on campus.

Two and three bedroom houses, apartments, and duplexes are the most critically needed, but homes of other sizes are also in demand.

Voss stated that a total of nearly 100 persons are expected to begin their new duties as members of the college faculty and staff in September, and in the interest of good faculty morale, the college is desirous of having all of its faculty members adequately located before the start of the Fall Quarter.

Beer bumped?

by WOODY GOULART

It appears that in certain parts of the country, for young people, to join is replacing the jigger. A new article in the New York Times cites the fact that several beer establishments across the state are seeing a loss in liquor sales due to an increase in the use of marijuana.

A beer brewery in Detroit, Michigan is launching a campaign to bring young people back to beer. In Colorado, beer consumption in taverns near the university of Colorado in Boulder has dropped sharply. A beer distributor in Denver says that in 1989 sales at one college were down 27 percent from 1987. Sales were also down 8 percent at another tavern near campus. Still another tavern reported a 71 percent decrease in beer sales.

The Times story reports that while most tavern owners deny that the joint has replaced beer, there are signs of a real trend from the youth toward drugs at the expense of drink.

The Denver beer distributor says, "They tell me they can sell when a big shipment of marijuana hits town. The sales go up, but what do you do? Tell them to go drink beer?"

A representative from the Detroit brewery asks, "Will the pot smokers become bigger and bigger? We lose more of the beer market as the size of the youth market increases."

The usage in the usage of marijuana has not affected all types of liquor sales, however. Drink barrooms and liquor sellers who serve young people all agree that sales of wine, which is considered an effective non-steroid, are on the increase. The manager of Tom's Inn here, a liquor store across from Michigan State University, said that sales of cheap, foreign wines were up, but he could not predict the trend on drugs. "The most I can say is that we're probably losing some hard liquor sales because of marijuana," he said. A student of MSU stated, "Beer drinking is not strange, but wine is ideal for stoners."

The Times article also pointed out that young people are substituting drugs for drinks,

apparently adults are trying to take the slack. A Michigan liquor store chain reports that cash sales were running five percent ahead of last year in state stores, following the nationwide trend. The Denver distributor conceded that his sales in areas away from college campuses were up last year.

With both generations seeking their own different kind of high, the generation gap has reached a new plateau. Each member of both sides of the gap can gaze at the other through his own respective haze. The future of such a social trend is indefinite, but one can envision that the viewpoint, from either side, is bound to be opaque.

Chemistry prof publishes paper

An article written by Dr. Lee C. Coombs of the Chemistry Department has been published in a recent issue of Inorganic Chemistry.

Dr. Coombs, a member of the faculty since January, was formerly a member of the Purdue University faculty and has worked as both a teaching assistant and spectroscopist at San Diego State.

The full title of Dr. Coombs' paper is "Equilibria of the Reaction Between Cyanide Ion and the Nickel (II) Complexes of Iminodiacetate and N-Methyliminodiacetate". A translation of the title is not available.

Cal Poly Students Always Welcome!
Class to present issues

An experimental course, described as being of "paramount importance," has been recommended to the dean of engineering. The experimental class was proposed by a senior in Industrial Engineering, Kamal S. Greiss. Greiss describes the experimental class as being an "issue awareness" class.

The Issue Awareness class, as described by Greiss, is a two-hour lecture per week. The objectives of the class are to develop in students a better understanding of social, political, and economical and environmental problems; to teach the students how to locate the necessary information to solve the problems they are confronted with; to acquaint the students with the methods of approach to such problems; and to teach the students to cooperate with others outside their field to solve the problem in question.

After one to three weeks orientation, the class will select a project manager to take the place of the class instructor. This elected representative will secure guest speakers for the class who will present first-hand information from the fields they represent. After each speaker reports to the class, the students will either write a report, or give an oral discussion.

The Issue Awareness course, pending subsequent administrative approval and adaptation, is designed to start Winter Quarter. Further information concerning the experimental class and its objectives may be secured by writing Kamal S. Greiss at P.O. Box 1293, San Luis Obispo, or by phoning Greiss at 544-0488.

The poetic happening will be held Saturday evening at 8 p.m., in the San Luis Little Theater, 1530 Monterey.

If you are, then I'm pretty sure that's what Mr. Gill named Athlete of the Year. The 25-year-old triple jumper has scored it big again. He was the only athlete in the NCAA conference to win a NCAA title and combine his effort into an impressive performance. Mr. Gill was the only athlete in the NCAA conference to win a NCAA title and combine his effort into an impressive performance.

Season ticket orders are now being accepted for the 1970-71 football season. Former season ticket holders will be given first priority, but new requests should be placed at the earliest possible time, according to Dave Oldfield, ASI ticket manager.

Orders can be sent to the ASI office, or phoned in to 545-3411. Reserved seat tickets for the five home games are priced at $13.00. The home season will get under way September 19, when the Mustangs take on the Kingsmen from Cal Lutheran College. The Kingsmen are the defending champions of the NAIA District III. They have won 43 of their last 48 games.

Next in line for the first of four home games will be Cal State Hayward. They were the Far Western Conference champions last year with a 1-1 winning mark.

Coach Joe Harper's Mustangs will test San Francisco State, Oct. 3, and the University of Nevada at Reno a week later. The Mustangs will then go out on the road for a week.

The final home game could possibly determine the CCAA championship. The homecoming contest, Oct. 24, will pit the Mustangs against the conference co-favorites San Fernando Valley and Cerritos College.

The public is invited to the "Aquarian Age Festival" to be held Sunday, Sept. 23, 1 p.m., at Laguna Lake Park. The festival is sponsored by the Central Coast Free University.

There will be a light show and electric music provided. Admission will be free.

A free festival

Summer on the Pacific Coast South was aided by wind, and enabled him to better Gill by a foot. Gill had no wind benefits in his jump attempts.

This was his first of two meet losses during the season. His second came in late June, at Bahrsfield. Gill scored 80 feet plus, but ended in a disappointing ninth place.

In an interview with Gill, earlier this year, he was asked whether he might compete with the United States in the '72 Olympics. The possibility does exist. On a student's wages it may be impossible for him to pay the import duties on the gold he takes back to his native India. Maybe his government will make an exception since his loot will be in watch and trophy form.

If he wins one more watch he expected to have a strong passing game. They will rely on their new junior-college trend, manned backfield Billy Bennis, to head their offense.

The Saturday homecoming game will begin at 3 p.m. The other four contests will be under the lights, beginning at 7:30 p.m.
History will not forget

The college student of this generation will probably go down in history for many reasons. The number of surveys which have been conducted in his behalf will be sure to occupy a fair share of that history.

A new national survey, which is to be published in the September issue of Playboy magazine, seems to shatter a lot of common misconceptions.

The priorities which students gave to other problems was also brought out in the survey. Although the war in Indochina is the most pressing concern of students polled (39%), more than 80% of the students gave higher priority to such things as racial conflict and the environment (15%) down to the 11th item, women's rights (1%).

No survey of college students would be complete without a look at the radical revolutionary. The survey shows that these are a definite minority. 83% of the students were against violent demonstrations, 42% of this total favored peaceful protests to bring about change in the educational system.

Seventy-three percent of the students believe that by working within the system they will be able to bring about the necessary changes.

(Continued from page 1)

As a "professor," seemed dependable.

But in his report to Grunsky, a two year study report, Kaplan defied Grunsky's imprisoned pretext, finding marijuana laws extremely harsh and out of tilt with fact.

In a subsequent book (Marijuana: The New Prohibition, World, 387 pp., $8.50) Kaplan advocates the legalization of marijuana.

Angered by Kaplan's "far out, liberal approach," Grunsky's committee fired the criminal law professor, along with others on the research team, all who advocated liberalization of the anti-marijuana law.

They were replaced by a prosecutor from the attorney general's office.

"Many college professors get the idea they are above the policy or the direction of those they are working for," Grunsky explained.

"I don't want to demean myself or the committee by getting in an argument with a professor."

The sun was strong in the sky by this time, the fog was being beaten back to the ocean. But it was still too early to be locked into political dogma; most of the day lay ahead.

How did I get back to peace on this cyclical morning?

"I tossed the paper aside, let Cyprus back inside, served another mug of steamy coffee, turned Joan Baez up loud and rocked in my rocker.

I don't want to demean myself or the committee by getting in an argument with a professor."

The sun was strong in the sky by this time, the fog was being beaten back to the ocean. But it was still too early to be locked into political dogma; most of the day lay ahead.

How did I get back to peace on this cyclical morning?"
