The Divisional Display Sweepstakes Award has been in the hands of the Graphic Communications Department since Poly Royal two years ago. The trophy goes to the best display and gossip has it that the printers wouldn't be adverse to keeping it for another year.

Do they rate? Check their exhibit out in the Graphic Arts Building.
EDITORIAL
Witness the awareness

As thousands of visitors traverse the campus today and Saturday, it would be worth their while to pause and reflect upon the accomplishments of this school in all areas.

Poly Royal is a combination of all the positive attributes of a year on campus. More than just a brightly colored carnival, the annual open house gives the new students a chance of show and off and flex new muscles of achievement.

The past year has signified change for Cal Poly. A new awareness pervades the campus, embracing not only ecology, civil rights and other popular fad issues, but also political, social and economic awareness of our environment.

Witness the establishment of Student Community Services, an organization to improve and coordinate relations between the city and the college, as proof that many students no longer consider themselves as transients where they live.

And this is just one among many—Ecology Action, Students Tenant Association, Faculty Evaluation Board—where students are working beyond what the classroom calls for.

An intellectual expansion is denoted by standing room only crowds to hear Dr. Norman Borlaug, Dr. Louis B. Leakey, Bobby Seale and Dr. David Brower, a few of the speakers on campus this year.

The trouble with Poly Royal has been its facade of a play period when everyone gets two days off. It is not.

Look past the gaily decorated booths, displays and creations. Look to the thought—the unified effort—behind them. And really see this campus.

Old time talky set for show

The first Laurel and Hardy movie with sound will be shown by the Speakeasy Club during Poly Royal.

The film will be shown in the College Theater at half-hour intervals throughout the two days. According to Bob Browne, president of the club, there will be an admission charge of 10 cents.

A display in the lobby of the Theater will proclaim a coming attraction sponsored by the speech and drama department—the stage presentation of "You Can't Take It With You."
“Merry Elizabeth”

A photograph by Ralph C. Neiling was announced recently as the “Best of the Show” in the Poly Royal Photo Contest.

But black and white print was "Hope" by Phil Valencia, a senior picture of a grandmother and granddaughter.

The contest was sponsored by Sigma Delta Chi, the journalism society. Judges included: John Healey, journalism department head; Larry Jamison, photo editor of the Telegram-Tribune; Dean Kingham of the journalism department and Jeana Twaitea, author and photographer.

The photographs will be on display in the journalism department throughout Poly Royal, in GA 368.

**Pulling their ‘weights’**

by BOB SCHNEIDER

A tractor pull is what you have when you hook two tractors together and see which can pull the other. Or so many people think.

But actually, according to James Bermaan, Agricultural Engineering instructor, the tractor pull scheduled for Poly Royal this year has nothing to do with hooking two tractors in opposition to one another.

Bermann said the idea originated with the horse pull, where a horse was given a specific load to pull down a track.

In the same way a tractor is hooked to a sled to pull a load down a track about 900 feet long, he said.

Bermann said the sled itself weighs about 500 pounds. As the tractor starts pulling the sled, more weight is added, in the form of people, until the tractor can't pull any further.

Bermann said one of the safety factors included would be a pace tractor moving just ahead of the pull tractor so that the speed will be kept to eight miles an hour.

The slower pace means the sled moves at the same rate of speed as the cable cars in San Francisco and insures there is no danger for the people jumping onto the sled to add weight.

The tractors will be divided into three classes according to weight. While the contest will include stock tractors only, most tractor pulls include a class for modified tractors.

With modified tractors it’s like a drag race," he said. This makes them more dangerous, so, because of the safety factor, they will not be included.

According to Larry Bechtold, chairman of the Tractor Pull Committee, the tractors will range in weight from 9,000 to 15,000 pounds. He said a tractor can enter any weight class above its own.

"We're hoping to get some entries from farmers and dealerships in Santa Maria and the valley. We might use some of our own tractors from the shops here, but we're not sure about that yet," Bechtold said.

Some of the rules for entries are that they have rubber tires and a standard engine block. Bechtold said dual tractors will be excluded from this contest.

He said in the contest itself, tractors must start from a light starting position, they cannot jerk the sled. Their front tires must also touch the ground every ten feet while pulling the sled.

The winner will be determined by considering the weight of the tractor in comparison to the weight it pulled and the distance it pulled the weight, according to Bechtold.

Tropic plants, flower shows now on display

"My garden...offsets me like sweet music...Among my flowers* and trees, nature takes me into her own hands, and I breathe freely as the first man."

This excerpt is from a poem by Alexander Smith that is printed in the front of the guide books to be handed out to Poly Royal supporters of the Ornamental Horticulture display program entitled "Impressions Under the Sun."

Headed by Dr. Howard C. Brown, the Ornamental Horticulture Department plans to have numerous displays designed and constructed by students of their department.

Some of these will be landscape displays, educational displays, flower show displays, and a tropical hut where all the different tropical plants that the department has will be on display.

The landscape displays will include final products that students have made using just basic principles, such as balance, form, texture, and color, all of which they learned in class.

Integrating mere boards, rocks, and other construction materials, and plant materials they formed artistic impressions that are balanced and harmonious in color and texture.

In the educational display, visitors will have a chance to see exhibits showing how students learn the basic principles of landscape drafting and design that are used to form actual landscapes and how a terrarium can be constructed.

The horticulture flower show, begun in 1960 and sponsored by the Ornamental Horticulture Department will include public entries also. On display will be specimens of potted plants and cut flowers, which will be judged by the nationally recognized California State Polytechnic College Intercollegiate Flower Judging Team.

Other displays will include the glasshouses, and the American Institute of Floral Designers (AIFD) displays. Glasshouses, including a mist house, muck house, carnation house, rust house, and potted plant house will be equipped with special fans, lights, sprinkling systems, conduction tubes, and heating systems for control.

In addition to the many displays, the Ornamental Horticulture Department will have on sale items such as container stock, bedding plants, possibly some tropical plants, and food and beverages.

Many people deserve acknowledgement for their participation in the planning and preparing of the exhibits, and each one of them to the department, this includes Mother Nature.

Crafts store opening today

Students now have a place where they can turn their spare-time hobbies into profit. A new crafts store, located in the Crafts Center in the College Union, will celebrate its grand opening today and Saturday from noon until 7 p.m.

According to Leslie Griffin, the Craft Center director, the store is an outlet for students and staff members to sell their craft articles.

The store will accept articles such as leather work, ceramics, paintings, photography, clothing or any other kinds of crafts. All prospective sellers must bring their wares to the center and indicate the selling prices for each item.

A maximum of five items from each consigner may be displayed at any one time. All items will remain on sale for one month. The store will keep 20 percent of all income with the balance going to the consigner.

The grand opening ceremony will include crafts demonstrations. Music will be provided by "Coffee House."

Following Poly Royal, the hours for the crafts store will be from 4 p.m. to 8 p.m. Monday through Friday.

THIRTY DIFFERENT STORES TO SERVE YOUR NEEDS
Residents hassle ‘home, sweet home’

Dorm reform issue causes more and more problems along the way

by MALCOLM STONE

Dorm reform is an unending one that seems to irk and amuse along with resolution continually around the bend.

Regardless of what the immediate issues are—24-hour visitation, quarterly contracts or a change of lifestyle—the long-term issues revolve around whether dorm residents have any rights and input in dorm regulation.

Administrators are caught between the rock and the hard place. On one side is their responsibility to the state, and on the other their obligation as educators to the students of the college community.

Watch out first—the established regulations or demands for the best possible learning environment! Everett Chandler, dean of students, has been at this college for 20 years. He said demands for dorm reform are nothing new. Being criticized is nothing new to him either.

"For 20 years I've played third base," he said. "There's no easy way on a lot of things."

While dorm reform has a long history the current issues date back to last spring. At that time the administration had a closed door policy. Whenever a member of the opposite sex was visiting a dorm resident the room their door had to remain open. Disatisfaction with the policy grew and resulted in 15 or 18 people marching in front of the administration building with placards.

Chandler said a group representing Inter-Hall Council, came to him about the controversy over the open door policy. A committee was formed consisting of faculty members and representatives from the administration and IHC.

"We met several times. Finally we said let's survey," Chandler said. "We also recognized at that time 40 percent of the contracts were signed by parents."

Chandler was sharply criticized for not making the results of the parental survey readily available to dorm reformers. He said he was reluctant to do so on legal grounds.

Some of the parents specifically requested that their replies be kept confidential. Chandler has kept that confidence by releasing the results in a generalized manner.

"No hang-up."

Chandler maintains he does not have "any big hang-up" about giving out the results of the survey. He says part of the problem is "parents don't respond the same way students do. Parents respond to at least 100 different ways to four questions."

"The Student Tenants Association is the most strident group voice for dorm reform. STA was originally organized to assist students in off-campus housing in knowing and asserting their rights as tenants."

Jim Abernathy, a third-year architecture major, is chairman of STA. Abernathy said last quarter several dorm residents approached STA for help.

"They felt IHC was not representative of dorm residents. STA was favored by 700 residents and 258 were happy with the status quo."

On the basis of the questionnaire results STA and IHC organized a Dorm Congress. The new group consisting of representatives from the dorms and members of IHC and STA drew up five proposals. It hopes the proposals will eventually become dorm policy.

The proposals call for 24-hour visitation to be instituted as soon as possible. IHC rules would be changed to improve its function. Quarterly contracts were requested for students staying only one or two quarters with higher fees than a student on a yearly contract.

Room checks were asked to be by appointment and sign-in, sign-out policy be dropped entirely. The establishment of coeducational living facilities were also proposed.

The resolutions were presented to Student Affairs Council and IHC for their approval.

The Dorm Congress also requested written statements from Pres. Robert E. Kennedy, Chandler, and Robert Bostrom, director of housing, by May 10 on their positions.

"All we're asking is that each dorm set up its own rules," Abernathy said.

The Dorm Congress would like the administration to voluntarily ease dorm restrictions, but in the event it would not the group is prepared to take the State of California to court, according to member Skip Kelley. Legal remedy was endorsed by all of the presidential candidates in the recent ASI election.

Kids are the crux of queen's ambition

by NANCY WILKESON

Every year about two months before Poly Royal campus clubs nominate girls—who have completed 126 credits and have a senior standing—to run for the Queen of Poly Royal. The student body then chooses the queen by voting.

This year's queen is Karen Nyitrom, the daughter of Mr. and Mrs. Gordon Nyitrom of Santa Cruz. Miss Nyitrom is a child development major and will graduate this June. She wants to teach elementary school after she receives her teaching credential next year.

A graduate of Soquel High School in Santa Cruz, Miss Nyitrom was a cheerleader and was active in the American Field Service.

She enjoys spending her spare time working with the children in the Pals organization, and she belongs to the Child Development Club as well as the Boots and Spurs Club.

The new queen was nominated by the Boots and Spurs club and ran for queen because she felt it would be a good experience. She feels that "the wonderfully unique thing about Poly Royal is that it happens because the students want it to happen."

The princesses are Sharon Ruth Craig, Georgia Lynn Pemberton, Camilla Gray, Sue Geer and Margie Kelly.

Miss Craig is a representative of Sigma Delta Chi, the national journalism society. Her parents are Mr. and Mrs. E. J. Craig of Chowchilla. She is majoring in journalism and plans to work in radio or television advertising.

The princess attended Chowchilla Union High School where she was vice president of her senior class and a member of the California Scholastic Federation. She attended Fresno State College for three years prior to her arrival here.

Miss Craig enjoys painting, dancing, reading and car and motorcycle racing.

Miss Pemberton is a business administration major and wants to work in the field of personnel when she graduates this June. She is the daughter of Mr. and Mrs. Frank Condello of Salinas.

Before coming to this campus, Miss Pemberton attended Hartnell Junior College in Salinas and Humboldt State College. She likes music and drama and is a member of Women's Glee and the Society for the Advancement of Management, the club she represented in running for queen.

Miss Gray is a home economics major who is representing the Dairy Club. Her parents are Mr. and Mrs. Dick Gray of Petaluma.

She graduated from Rancho Delta High School in Petaluma where she was a cheerleader and a member of the 4-H Club.

The princesses are Sharon Ruth Craig, Georgia Lynn Pemberton, Camilla Gray, Sue Geer and Margie Kelly.

Miss Gray likes to snow ski and sew and is an active member of the Dairy Club and of Pals. After graduating in June, she wants to be a Consumer Consultant in the field of dairy.

The princess ran for queen because she felt it was a "good chance to represent Poly Royal."

Miss Creer is majoring in math and is the daughter of Mr. and Mrs. Edward E. Creer of China Lake. She is the secretary of the Math Club and a member of the Symphonic Band. Her interests include playing the guitar and riding motorcycles.

She attended Sherman E. Burroughs High School and was a member of the band, the tennis team and the student council. She says she wants to be a "cool high school math teacher" after she

YOUR 24 HOUR STATION

In conjunction with the display of the Tournament of Roses Parade, the Rose Parade Float Committee, whose main function is the raising of funds to build the float, will have a stand outside the Computer Science Building to sell plastic flowers, bike bags and glasses. The Rose Parade Float Club will also sponsor the "High Striker" booth at the carnival tonight. Roses will be presented as prizes.

According to Little, the college will be attempting to win its ninth consecutive major award at the 1973 Tournament of Roses Parade. This year the college was presented with the Mayor's Trophy for the best display in originality.
Requiem for a tradition

by STEPHEN STANGANO

I hope you enjoyed the last TG you attended. It was probably your last. The phenomenon known as TGIF (Thank God It's Friday) is about to be dealt the death sentence by the city of San Luis Obispo.

The problem that gave the Friday afternoon bash of a recent origin, but the TG is as old as college fraternities. The bars yards of all those early frat houses were filled, on Friday's after class, with relieved students trying to drown the week's frustrations with paper cups of beer.

The bigger, as it was called then, was innocent enough when put on for the entertainment of the fraternity members and their guests, but the profit motive took the party out of the backyard and put it in the park where it could make more money.

Today the TG is likely to be beer, a band, and a 1,000 students looking for a Friday night date. When this many people get together in one place, something has to give. The community blames the resultant drinkers brawl on the fraternity who immediately point the finger at the jock who, when drunk they said, always started throwing punches. As damaging as all this is, it will have very little to do with the death of the beloved TG.

The epitaph reads that students defaced property, unraveled carelessly, disturbed the peace and caused traffic accidents. The charges are all true which makes the defense of the TG weak, at best.

The city, until recently, took a position of benevolent blindness when it came to the TG. The age of innocence is now over for the TG functions.

A subcommittee of the San Luis Obispo City Council's Human Relations Committee (HRC) is trying to find a way to allow the events by setting up strict guidelines to rule TGs. The committee proposed that the beer parties be sanctioned by a TG governing committee which is establishing age, and time limits which must be agreed to before and adhered to while the party is in progress.

The efforts of the HRC may be in vain as the city council in giving the evil eye to the TG. In a meeting held a few weeks ago, the council refused to endorse the HRC's proposal.

While the TG Committee is trying to okay the parties the San Luis Obispo Police Department is planning to say no. According to Ervin Rodgers, police chief, all TGs have been

Tri-Beta offers trip into dune

Discover what is in the center of a sand dune and see the Biology Department's display in Science North, rooms 106, 110, and 118, today or Saturday. The display is a joint effort between the biology-science department and Tri-Beta, the departmental club, according to Keith Pearson, student chairman.

A three-dimensional view of a sand dune will be one feature of the display. Visitors will feel as if they are walking through the center of the dune. Finding out what holds it together will also be shown, as well as the plant life. A lake, typical of one found in the center of a dune will be presented in another display.

Van Morrison

The musical talent of Van Morrison will fill the Men's Gym Saturday night for the enjoyment of students and Poly Royal visitors.

Morrison was the lead singer for the rock group Them before he formed his own group. He has four musicians backing him up. Dan Fogelberg, who plays piano and acoustic guitar is the second act. Fogelberg has been touring the country with Morrison's show.

Dave Tasso, program counselor, said a local act was added to the three-hour package. The concert will start at 8 p.m.

Tickets are $3 and $4 and can be purchased at the College Union information desk.

Carnival faces slower paces

The Rally Club is sponsoring the tenth annual turtle race from 6 to 11 p.m. Friday April 28 at the carnival.

The races will be run in heats with preliminaries, semifinals and finals. According to Chris Buhby, chairman of the event, the list of heats will be posted Friday afternoon at their booth at the Yosemite Hall parking lot.

The grand prize will be a trophy with ribbons for the winners. The Rally Club is sponsoring the turtle race in memory of the 50th anniversary of the club.

The Rally Club also plans to hold a fireworks display after the races.

Coffee house, a place to do your own thing

The Coffee House, a gathering place for individuals who do their own thing, have changed meeting times just for Poly Royal.

Other than the regular 7:30 p.m. to 10 p.m. Sunday night meetings in the CU 207, the Coffee House will be open on Friday and Saturday from noon until 7 p.m. The Coffee House will be located in the Crafts Center in the College Union.

Some people may ask what a coffee house is. On this campus, the Coffee House represents a time and place where students and teachers from various colleges may come to share their talents such as folk music, singing, and poetry recitation.

The Coffee House offers entertainment, and refreshments including popcorn, cider, and other kinds of coffee.

Performers you must first audition before a panel. Auditions are every Thursday during College Hour in the College Union.

Loves kids...

Continued from page 11 receives her secondary teaching credential.

Miss Creer wanted to get involved in something on campus and felt that running for Poly Royal Queen would round out her college career.

Miss Creer, a speech major and represents the Speak Easy Club. She is the daughter of Mr. Joe Kelly of Pasadena. She is president of Pals organization and is an active member of the Speak Easy Club. Her ambition is to teach or work in speech correction.

Miss Kelly that Poly Royal will reflect the feelings of students on campus as well as the community.

The queen and her court have been busily preparing for the annual event. They have made quest appearances at community clubs, have attended many luncheons and basketball games, and have traveled to Santa Barbara, Santa Maria and Salinas to appear on local television stations.

The title will be on hand during the weekend to present awards at the Live Stock Show and will attend the other activities scheduled for Poly Royal.

Welcome Poly Royal Visitors

From HURLEY’S PHARMACY in College Square

We know that you are often excited about a trip and sometimes you may forget an item of importance. HURLEY'S PHARMACY has been serving Cal Poly students for years and would like to serve you during your stay.

We have complete prescription, photo, cosmetics departments, as well as greeting cards and gifts. We also cash Cal Poly checks.

Come in and see us.

We hope to make your stay an enjoyable one.

‘We’ll catch the sun—never let it go’ signifies goal worth grasping

The slogan “We’ll Catch the Sun and Never Let It Go” was developed with the idea that everyone could make their own interpretations, according to Randy Detmer, the originator of the much talked about ‘73 Poly Royal poster.

Detmer is an architecture major and a working member of the Poly Royal Board. Detmer said the whole idea originated from a concept rejected by the board.

The board had been trying to develop a poster which would grasp a kind of expanding idea, Detmer said.

The slogan presented to the board was too long and difficult to comprehend according to Information Officer Charles Mendenhall. During an architecture class of Detmer’s classmates mentioned a poem by Rod McKuen entitled “I’ll Catch the Sun.”

Thus, the poster was developed around an idea concentrating on education and a high educational goal.

McKuen’s whole poem was not considered when the poster was in the planning stage. The first lines were the only basis for the slogan, said Detmer. They read: I’ll catch the sun and never give it back again.

Campus event from tiny seed

by NANCY WILKERSON

A piece of a cardboard “packing box decorated with glitter and rhinestones” served as the crown for the queen of the first Poly Royal according to its creator, Young Louis, professional photographer and graduate of this college.

He remembers the first Poly Royal as being “very limited in the amount of money” that could be spent on it. No budget was set aside for that first Poly Royal, held in 1969, as there is today. The $317 that was used came from the pockets of students and the profit was about $1,400.

A parade was not included in the schedule of events and everything was on a much smaller scale with the department displaying their wares.

Mr. Louis, who says he is “almost 80 years old,” was born and raised in the old Chinese sector of San Luis Obispo. He has created the official portraits of the Poly Royal queens and their courts for the last 38 years.

He attended the college for three and a half years to learn how to operate the electrical equipment in the theater. Louis graduated with the other 17 or 18 people in the class of 1931. He was a stage manager in a theater for 35 years and owned a photographing plant in San Luis Obispo. He has operated Louis Photographers studio since 1948.

Mr. Louis said that Poly Royal “is almost proud of Cal Poly” and that he is “very limited in Poly Royal” probably never dreamed that Poly Royal would turn into a tradition.

Signs of scientific future

The Industrial Engineering Dept. has planned a motivating display based on IE as the “Profession on the Move.” According to James Golden, IE adviser for Poly Royal, displays of people in different areas of employment will support the theme. Pictures, statements of the future of IE and its relevance to current positions by those graduates all will be on view to reflect the diversity of the major.

The scientific approach and the many diverse solutions to problems in IE will be viewed in the curriculum display. The lab will illustrate the latest production methods.

All this will be shown in Rm. 103 in the Graphic Arts Building during Poly Royal.

Cowboys ride, logs roll

by ROBIN BAKER

Cowboys and clowns, tractor versus tractor, and the creation of a redwood log are some featured activities for School of Agriculture and Natural Resources during Poly Royal.

The cowboys and clowns can be seen in one of the three rodeos sponsored by the animal science department. An all-day horsemanship and animal showmanship activity will be presented by the School of Agriculture and Natural Resources during Poly Royal.

Reaored by the animal science department. An all-day horsemanship and animal showmanship activity will be presented by the dairy science department. The natural resources management department will build a redwood log. The major emphasis is on controlled burning of redwoods.

Fertility will be in the soil sciences department’s display as they demonstrate a working soil testing laboratory. Information on crops response to fertilizers and soil fertility will be available.

“Things from the soil” is the crops science department’s creation as they make a salad of vegetables.

Food industries department’s feature will include meat values concerning cos analysis, selling their own processed jam, and an automatic apple peeler and cutter.

Charlie Brown takes care of the Agricultural Management Department when he hits the three bases of education in their display.

For the fun of a country fair on campus, everyone is invited to visit the displays and activities featured by the School of Agriculture and Natural Resources.

- Bowling
- Pool
- Football
- Pinball

Although plans for several new phases of construction will be put into effect during the upcoming school year, the construction of a new library for this campus is not included in those plans.

According to Library director, L. Harry Browne, the plans have been scrapped at least for another year. Architectural drawings for the new facility have been completed for several years.

Buildings that the master plan and budget will allow for include the conversion of a part of the present science building into a chemistry facility. 871,000 has been allocated for this project.

A new entrance road is next on the construction agenda. Approximately 860,000 is designated for the widening and construction of the present “back” entrance to Cal Poly.

A master plan was one of the earliest requirements of the trustees who took over the college system in 1961.

IDs increase efficiency

by PAT ROGERS

The new hard plastic ASI identification card with the student's picture on it has all systems go after almost a full year of operation.

Although opponents of the card said it would further decentralize higher education, the ID card has served its purpose by increasing efficiency where it is being used.

Three organizations on campus are using the cards the most: the Health Center, the Marksmen and the Dexter Library.

Dr. Billy Mounts, director of health services, said the ID card is working well at the Health Center. He said it has helped cut down on the number of people who use the Health Center but are not students at this college.

Mrs. Colleen Miller, a Health Center clerk, said the card is used in much the same manner as a gasoline credit card. The student fills out a small information sheet, and his card is used to print the name and social security number on it.

The clerk said this system has helped identify the student if his signature is illegible.

The Foundation uses the card mainly for check cashing purposes, according to Al Amaral, Foundation Executive Director. All students must present their ID cards before cashing a check, he said.

The most extensive use of the new ID card will be in the library according to Harry Strazza, director of the college library. New machines will go into operation this summer which will simplify checking our books. The system will be almost totally computerized.

Opposition to the card came from some members of the Student Affairs Council (SAC) when the ID card system was first presented to them last fall, said Everett Chandler, dean of students.

Chandler said some people were afraid the picture on the ID card was an invasion of privacy. One even thought, he added, that copies of the pictures were to be sent to the Federal Bureau of Investigation (FBI).

The campus newspaper battle is not settled yet

by ROGER VINCENT

Controversy broke out early this month at San Fernando Valley State when the Associated Student government officials decided to charge rental fees amounting to $60 a month for the paper, Sundial, use of printing equipment owned by the A.S. According to co-editor Cary Cutler, "We wish to be independent of A.S. money control. We'll buy our own equipment if we have to." Budget hassles in the past have resulted in frozen funds and accusations of ballot stuffing.

The Sundial was allocated an equipment fund of $4,500 which the editors wished to carry over to next year's budget. The conflict to have extended the longest began a few months ago at San Jose State where the A.S. Press Mike Buck expressed the desire to cut the funding of instructionally related programs. These include the Spartan Daily, Radio-TV News, athletic and intramural programs, musical performances and the marching band.

Buck wanted to use the money for co-op housing and bookstores instead of the funding of instructionally related programs. This was asked to interpret the initiative. The final decision was that the initiative was indeed binding and that A.S. funding of the instructionally related programs would continue and alternative funding can be found.

Events galore

Poly Royal activities appeal to all ages. A galaxy of special events ranges from rodeo to rodeo. A children's glue-in and a tractor pulling contest will be new facets of the 40th annual events range from free to paid.

The mighty milkers will be out in force this weekend as the dairy club, Los Lecheanes, presents every aspect of the dairy industry.

Early risers can see the milking operations in process from 3:30 to 5 a.m. For those of a later inclination, Poly Royal, the cows will be milked again from 9 to 11 a.m. For the youngsters, baby calves will be fed toward the end of each milking.

At 8 a.m. on Saturday students from Dairy Husbandry 131 will compete in a fitting and showing exhibit in the Dairy Pavilion. According to Dr. Harry Marko, class instructor, the animals being shown have been the students' responsibility since their assignment in the beginning of Spring Quarter.

Caring for the heifers involves feeding twice a day, grooming them, teaching them to lead in show-ring situations and practicing for the show. The 41 students and their heifers will be competing in four classes, one each for Holsteins and Jerseys, and two classes of Guernseys.

The trophy was donated by Ripley Hopkins, in addition to receiving a ribbon. In 1953 the seedling was called "Poly Royal" and 300 interested spectators gathered to witness the poultry, horticulture and livestock judging, and to share in the festivities including an afternoon barbecue, band concert, baseball game and an evening dance.

by BONNIE ETCHISON

What can one say about the four million-dollar college union building on this campus? Among other things, "Try it...you'll like it!"

Activities offered in the CU are bowling, pool, ping pong, football, and games like chess and checkers. A small fee is charged for classes - in photography, pottery, macrame, silk screen, batik, dye, jewelry, and lapidary. And, no CU would be complete without a well-length bulletin board covered with notices for rides wanted, roommates needed, or things for sale.

One room in the CU is presently being rented as an ice cream parlor by a food service concession. Stereo Watt will also rent a room as an extension of their downtown business.

The concrete-grey structure, which took approximately two years and ten months to build, was begun in May '68 and finished in March '71.

Architect Joseph Escherick of San Francisco was appointed by the trustees to design the building for the college. Escherick drew up plans for the college union but wasn't satisfied with them until his 37th design.

Since the CU was to be primarily for students, it needed to be rugged so that people would not have to worry about scratching the walls or floors. It also needed to be comfortable so that people would relax and the coat of maintenance would be low. Concrete fit the need, and it was about the same cost as other material would be to build the union.

Obstacles in finishing the CU caused a six month delay. Things like plumbers and operating engineers going on strike for about six weeks. Unusually heavy rainfall resulted in the delayed completion of the building.

The building itself covers 106,000 square feet, or about two-and-a-half acres under roof. The site was chosen as a center of campus activities. The dining hall, the large gymnasium, and the college theater are within a very short distance.

The cost of maintaining the CU is in excess of $500,000 per year. Operating expenses come from part of the student registration fees, about $16 each quarter to be exact. Next year the price may be up to $30, which is the maximum the college can charge.

Next year will be a financially tight year, for the college must draw upon the money it makes this year. The House of Urban Development loaned the college three million dollars at three percent interest with a 40 year term. This interest is low compared to that of the open market, but more stringent controls are employed because it is the public's money.

To put short and sweet, "We like it!" said E. Douglas Gerard, Executive Dean. Most people that take in the college union will agree. "Try it...you'll like it!"

It has long been the objective of Poly Royal to take time out each year, dress up the campus, and get the public to a weekend of enlightenment as to what the youth of this college are achieving.

Traditionally, this has been accomplished by offering projects, displays and demonstrations produced by the students through knowledge acquired from their curriculum.

Unfortunately, the trend in some areas has been a reliance upon the commercial counterparts of various industry-oriented departments. Rather than students designing displays there has been a great deal of commercial display commercializing which has allowed schools to skate through Poly Royal with admirable presentations but which have amounted to little more than free commercial messages for companies within an industry.

One such department, formerly known under this use, was Food Industries. However, they have seen the error of their ways and plan to change. According to Jim Patton, Food Industries Poly Royal committee chairman, "This year we want to avoid the high level usage of commercial displays. We are encouraging individual projects in an effort to induce greater student involvement in the departments Poly Royal activities. We want to get more students participating rather than just a few putting on the whole show."

"Stimulate public"

Patton went on to say, "We will, however, utilize commercial materials and products in the extent of comparing products now being produced by the industry with those we produce here on campus. In this way we hope to show the public the depth of professionalism we strive toward. We are hopeful that this method of display will further stimulate public as well as student interest."

The Home Economics department is also instigating changes, hoping to develop more student concern and public interest.

Sue Stoll, Home Economics Poly Royal chairman said, "We would like to get more people in on our Poly Royal activities. We always have a good turn out for the preparation of our projects but we want to get more people actually participating during Poly Royal. Members of the committees are going to be visiting various classes and having short discussions about our plans, kind of pep-talks you might say. Also, we have distributed questionnaires to the faculty to get their opinions and hopefully more interest in our projects."

"Visitors enthralled"

The problem of effectively communicating with the public has also been for planned changes in display techniques. Stoll said, "Last year our program was too much telling the consumer what we do instead of showing them. Visitors complained of having to read too much from the displays. So, this year, we plan to lean heavily toward the use of demonstrations. This should also help to get more students participating."

"Egg and art"

Children as well as professionals have participated in the "Egg and Art" contest sponsored by the Poultry Club for Poly Royal.

The art work will be judged and displayed in Ag. shop 1. Also on display will be information on incubation, cholesterol education and consumer education about poultry.

The goal of the Home Economics department this year is to achieve a change in their public image. Stoll complained, "Too many people think of Home Economics majors as girls going to school to find husbands and learn how to become good little homemakers. We want to show the public that ours is a highly professional field."

The student machinery is moving into action and what they are aiming for, at least in Food Industries and Home Economics, is a united effort to demonstrate to the public the degree of professionalism achieved by students at this campus.

The dream of a 36-man house

by BENET BERARD

After twenty years of hard work, Delta Sigma Phi finally has a new home. The brothers of DSP moved into their recently completed 36-man house over Easter weekend.

The house itself was supposed to be completed by the beginning of Fall quarter. However, with the start of classes in September, the building had yet to be started. Taking the delay in stride, these resourceful fraternity men made the best of the situation and moved into Mustang Village.

There they stayed until last Easter when their house was finished. The house consists of a central living area and six separate living units. This main living area is the center of activity of the fraternity. It is made up of a large livingroom, television room, dining room and kitchen. The separate living units contain two bedrooms, a living room, bath and a separate study area. Thirty-one of Delta Sigma Phi's present membership of 70 are living in the new house this quarter.

"We began thinking about a new complex as soon as we moved into our old house on Palm Street in 1952," Bob Ferguson, president of Sigma Delta Phi explained.

The property, which is located next to the Cal Park apartments on California Blvd., was purchased by the fraternity in 1961 through a loan from a local bank. John Kerr, chapter supervisor, and other alumni were the principal backers of the loan necessary for the construction of the new house. Kerr, house project coordinator, was said to have been invaluable in his help to the fraternity, and especially in acquiring this loan. Jack Westerman, a local contractor built the $95,000 two-story structure. The members of DSP are presently landscaping the property.

Delta Sigma Phi has a long and proud history. From the time of its founding in December of 1949 to the present, DSP has grown to become the largest social fraternity in San Luis Obispo. Their first house was located at 678 Monterey. This structure was destroyed by fire on September 19, 1959 and the Brothers were forced to live under the grandstand in Mustang Stadium and in some of the homes of some of the citizens of San Luis Obispo.

In December of that same year DSP moved to 1124 Palm Street, which was to be their home for almost 10 years. Then in the spring of last year the dedication was made to go ahead and build a new house at 944 California Blvd.

All that time everyone con­nected with Delta Sigma Phi put forth their best effort to get the new house built. Complications arose, and the Brothers were without a house for two quarters. Construction finally started during Christmas vacation, and the new house was ready for occupancy on April 1. The job of moving in began.

DBP members enjoy the luxury of a new home.

A great deal of work has been done in order to get the house ready for dedication on Saturday of Poly Royal. The brothers are expecting many of their over 600 alumni to return for the ceremony which will begin at two o'clock. Guests will include college Pres. Robert Kennedy and the national president of the fraternity. Construction finally comes true.

A number of well-known personalities, including Marvin Miller and Richard Hall, will have leading roles in the ceremony which will begin at two o'clock. Guests will include college Pres. Robert Kennedy and the national president of the fraternity.

Dalta Sigma Phi fraternity is involved in both campus and community activities as well as interfraternity and intercollegiate affairs. And although DSP is a "dry house" (no alcohol on the property) they do have many social functions away from the house.

They presently have a pledge class of 13 and are planning to expand their membership in the future. Anyone wanting to learn more about fraternity life is welcome to stop by and talk to any of its members.

Cuesta comedy opens

The maddest and gayest of William Shakespeare's comedies, "The Twelfth Night," will be presented Saturday at 8 p.m. in the Cuesta College Auditorium by Cuesta College Community Services, according to Pres. Martin E. Eisenbeiss.

A number of well-known television and motion picture personalities, including Marvin Miller and Richard Hall, will have leading roles in the production.

Tickets for the program are now on sale at the Cuesta College Bookstore or Community Services Office, and other downtown locations. Admission is $2.00 for adults and $1.00 for students.

Consumer gets advice on beef

Boots and Spurs Club will present a display in Ag 111, Friday and Saturday. The display will be divided into four sub-sections including breeding and weaning programs, stocker and packing programs, and the effects of beef production on the consumer.

Members will be on hand to talk with visitors and students on the economic aspects of beef production and to discuss the reasons for today's high beef costs.

The club will also present a film in Ag 111 throughout both days on the cow-calf operations used throughout the country.

Red tape cut by system

by SANDY WHITCOMB

A student majoring in city planning has come up with a systems analysis approach he claims will cut out the headaches of student government.

Skip Kelley, the originator of the plan, said, "Systems analysis will enable students to find out what is possible in student government at this school."

"A person who wants to get a controversial speaker on campus, for example, has no idea of the significance of the problems involved until he is in the middle of them."

He said that when students have creative ideas for the college but they get so tangled in red tape that they give up.

Kelley said his systems study analysis would disavow the confusion about the rules governing school policies. He has compiled all of the significant state laws pertaining to this college system, all of the laws and regulations authorized by the Trustees, Chancellor, and the college administration as well as the local ACT codes and bylaws.

Kelley has indexed each law under every conceivable subject relevant to it. A simplified system will refer the student to a number which represents the specific subject he is interested in.

The student then looks up the number system to find out what other groups cover that area. The researcher then narrows the group, each with its own number, down to those which pertain to his specific question.

The law, section number, and paragraph number is listed in this index and a tab number is given which refers the student to the volume and location of the relevant law.

Although it may sound complicated, Kelley said that it is simple to use and can answer any college policy question within five minutes.

"Also," he said, "the answer will be only as comprehensive as the people need them to be ..

"Volume one is the index," Kelley said. "Volume two lists the constraints and possibilities on the state level, volume three deals with the college administration level, and volume four lists those given to our own ACT codes and bylaws. It is a summary of all constraints and makes it possible for the student to know exactly what he can and can not legally do."

...They could tell us anything they wanted about the law...

According to Kelley, the administration has cited rules and decisions based on committee recommendations as reason for restricting student action.

"Before this systems study analysis," said Kelley, "they could tell us anything they wanted to about the law because we didn't know what they were.

We had to take them at their word. They usually only told us the parts of the laws which defended their side.

"The students should be able to have reference to the complete laws and use them to their own advantage," said Kelley.

He said his goal is to "create an honest model of the existing student government system and to make it available to everyone, not just those who happen to agree with me on any particular issue."

The analysis will also show who the executive heads of the administrative committees are so students can apply pressure to the proper people.

"For example, advisory committees to the president of the college serve real purposes. The president must base his campus policy decisions on the committee findings. He can not decide on an issue until he has at least heard a recommendation from the committee," said Kelley.

"But the president is the one who schedules the issues discussed and can delay the recommendations for as long as he wants to."

In this way, Kelley said, the issue can be put off until the end of the school year.

By the time each year's new officers become familiar with the government system and bring up the same topic, it is late in the year and the issue is indefinitely delayed again.

The study enables new officers to understand what is going on in a couple of weeks when it usually takes six months to gain enough experience and exposure to do a good job.

With the systems study, said Kelley, the student can find out the volume and location of the laws which defended their side.

"The administration, for example, said the ACT couldn't have an attorney," he said.

Kelley is working on a feedback system to which those who use the systems study can report any problem they have with it.

He said that he constantly can improve the study to increase its efficiency.

Kelley is limiting the number of volumes produced so they can be kept up to date. The analysis will be revised later in the spring when Kelley will add more information to it.

After that, revision will be part of the curriculum of the student government class offered here.

The class members will make sure that all new changes in legislation and the resulting changes in the articles and titles are recorded. (Continued on page 34)
President's House symbolizes hospitality

by JONNIE T. FUENTES

If this college had to be symbolized in concrete and wood with the plaster of unity and hospitality abounding, through the presidential Poly House would stand as the symbolic structure.

Even within its recent regeneration, Poly House still retains Its title as the welcoming house of the campus as it did in the distant days. Not for many years has the Poly Royal celebration been graced by an overall unifying welcome mat.

Over the years Poly House has been graced by the students and as the stuccoed structure showing through, the dedication ceremony on Founder’s Day, March 7 included Chancellor Glenn B. Dumba and Mrs. Julian A. McPhee, widow of former president of the college, Julian McPhee, for whom the college Union stands in memoriam, and their daughter Mrs. Harvey Norton.

Located on the West side of the campus behind the men’s athletic dorms atop a grassy hill and a well-lined garden, Poly House enjoys a primarily functional purpose. It will be used as an activities center for faculty, staff, and student groups for their participation in luncheons, dinners, seminars and conferences and workshops.

Howard West, Associate Dean of Resources and Planning and Educational Director for the Poly House, reemphasized the interdisciplinary concept behind the building.

“With the assistance of the faculty and university in actions that highlight the complex world. We can’t solve all the problems of the world with science or engineering alone. Indeed, we must have a broader outlook. We want to take this interdisciplinary outlook and work as a team. We hope that the conceptual involvement in Poly House will spill over onto our educational process.”

Formerly the president's house was residential in nature. It has housed two of the college's presidents, Dr. Benjamin H. Crandall and Dr. Julian A. McPhee.

Campus landmark is official welcoming house.

Dr. and Mrs. McPhee raised all four daughters in this house and resided there for more than 30 years.

Reconstruction first began in 1956 with a dual purpose in mind. One, to uphold Poly’s philosophy of “learn by doing” and also to provide an educational introduction to students, according to West.

Architecture Practice 441 became the master of the reconstruction crew. It was in this two unit class that aspiring architects were able to put theory into practice. The frame of the house was left intact but the inside has experienced complete renovation. There has also been an area of 4,000 additional square feet added to the original frame.

All In the Spanish motif, Poly house has been furnished by the complement of Mrs. and Mr. Armintorea B. Carter. Carter is a retired member of the California State Board of Education.

Horse show to include championship classes

Poly Royal's annual Intercollegiate Horse Show opened at 9:30 this morning in the new Cutting and Reining Club arena which is located just above the horse unit.

The general contest rules for the Intercollegiate classes are that participants must be regular students and be in good standing. Each college may be represented by one team of not more than six students.

Another regulation for students from this campus is that they must be members of the Cutting and Reining Club and on an eligibility list.

The events that constitute the Intercollegiate division will consist of Showmanship, Hunters and Jumpers, English Pleasure and Equitation, Western Pleasure and Equitation, Trail, and Stock and Hackamore Horse.

OPEN SHOW

Saturday, at 9:30 a.m. will be the open show. Anybody eligible.

In addition to the events in the Intercollegiate show, the open show will accommodate three more classes—Kindergarten, Tandem Bareback, and International Stock Seat Medal.

Three Championship classes will be held during the show—Jumpers, Championship Hanmore Horse, and Championship Stock Horse.

The awards in the Intercollegiate classes will consist of silver buckles to first-place winners. Leather halters will be presented to first-place winners in the open show division.

This show is approved by the California Professional Horse Show Association and will be judged by both days by Mrs. Betty Greene of Arcata, Calif., and announced by Mr. Malcolm Russell of Chatsworth, Calif. Spectators are welcome to the free horse shows.

Math confab tests students

Some 800 students from high schools throughout California are expected to enter the 3oth annual Poly Royal Mathematics Contest at California State Polytechnic College today.

Being presented under sponsorship of the mathematics department, the contest will take place in several campus classrooms according to Volmar A. Polson, a member of the college faculty and chairman of the mathematics department.

The top three individual winners in the contest will be awarded cash prizes of $60, $40, and $20, respectively, from a $800 donation from Morris and Dee Insurance Brokers of San Luis Obispo.

The high school team which wins top honors will receive a plaque, slide rules and drawing sets. Mathematics books will be awarded to the top ten contestants and members of the winning team.

Two written examinations will be given in the contest. In addition to the written examinations, the contest will feature a "Chalk Talk" competition in which high school students will participate in oral presentations.

Steel mushroom clouds salute weekend visitors

by JANIS GLOCKNER

Steel mushroom clouds have sprouted up near the library lawn to welcome visitors to this campus and serve as a reference point to the activities taking place this weekend.

Compliments of the School of Architecture and Environmental Design, this structure also serves as a graphic display of the school's theme, "The Dawning of a New Environment."

"The mushroom cloud structure functions as a system to define a new and moving spaces," explained Scott Maurer, communications chairman for his school.

"It is a series of repeating arches spanning across a forming complete dome. It proves that domes can work as a system and grow out of each other." The two steel conduit structures were designed by Richard Cho, Joe Chow, Mohammad Bedeghi, Ed Wang, Danny Lam, Bob Levenson, John Motien, Carl Schumacher, Bob Bambina, and Allen Tan, all fourth year student in Mr. Jake Feldman's Design Analysis class.

"Fifth year students are displaying their ideas of re-designing the internal and external features of the fabric space capsule idea in the architectural critique room which is adjacent to the Artificia Palm.

"The third, fourth, and fifth year labs are endeavoring to communicate an expression by means of creative lab design. The designed expression shall further enforce our desire as one school of Architecture and Environmental Design that recognises the need for change, and the need for a dawning of a new environment," says Maurer.

Baja race car...

(continued from page 11)

"The car is being modified for reliability, and not huge horsepower," said Mike Maher, who works on the electrical system. "It's only a six-cylinder engine.

"We've gotten a lot of parts donated," said Maher, a senior in printing. These include two engines, nine tires from Sears, and a cab from Yellow Cab of Los Angeles.

Work on the car is being done by four divisions, said Rewlinkel. Blazer is in charge of the electrical system, Jeff Hendrickson, the body and roll cage; Bill Hayes, the front and rear suspension; Chuck Raggio and Rewlinke, the engine and drive train.

"Under these there are sub-grids like brakes," he said.

The National Off Road Racing Association, and "Hot Rod," "Cycle World" and "Car Craft" magazines have approached the car team with a unique idea, Rewlinkel said.

"What we've been presented with is a fantastic thing," the coordinator said. "NORRA has said, 'Why don't you guys (Cal Poly) get involved and we can have a Missile, off-road race entirely for collegiate teams.'"

"The magazines have expressed the idea of taking off the Cal Poly teams, as two cars, as sister schools, and making the challenge to other colleges. 'Does anyone else want to try?'"

The entry fee of $300 is being paid by the Society of Automotive Engineers, Maher said. This includes insurance for the car — amounting to $400,000 total coverage. A written report will be submitted to the SAE on the condition of the car following the race.

"We're working on the car under the auspices of the Engineering Council," said Blazer. "A class, ET 400-39, has been organised so that the (13 to 18) students working on the car can get course credits."

"Hopefully in the future senior projects could be performed on the car with the race being the test of it," said Rewlinkel. "We'd like to be able to give problems in design to classes. That's what Pomona is doing, and it's very successful."

"We've gotten support from instructors in Ag Engineering, ME, and RT. The support from the school has been fantastic. It's going to be rough, but I feel we have a good chance of finishing the race. That alone will be an accomplishment."

Processing of food on tours

Tours, displays and demonstrations will be shown by Food Processing Club members throughout Poly Royal.

Visitors and students are invited to the Food Processing plant where members will display the use and techniques of machinery and equipment used in making goods sold in the cafeteria.

The apple peeling machine will be in operation full time, which is usually of interest to visitors.

Phyllis Stewart named honored guest

by JOHN TEVER

Poly Royal's honored guest this year is a woman whose service to this university has maintained the sanctity of many a frenzied student.

Mrs. Phyllis Stewart, who has recently retired after 13 years, held down the emeritus post of accounting officer for Associated Students Inc. In that position she was responsible for the financial transactions of student government, the various boards, and the clubs of the A.S.I. Included in her responsibilities was supervision of the financial transactions involved in Poly Royal.

The selection of the honored guest is determined on the basis of contributions made to Poly Royal. General supervisor of Poly Royal, Randy Dettmer, explained Mrs. Stewart's selection. "During her 13 years of service, Mrs. Stewart, working just about every club on campus, not to mention Poly Royal, immeasurably aided countless student undertakings. During the course of her efforts, hundreds of close relationships were struck up between Mrs. Stewart and frazzled-yearly students. Our selection of Mrs. Stewart as honored guest at Poly Royal is our way of recognizing her work and those many relationships.

When informed that she had been awarded the honor Mrs. Stewart replied that she was 'flattered and honored by the committee.'

When describing her years of student oriented activities, Mrs. Stewart smilingly said that "Everything that every student organization needs to do is an emergency, and it needs to be done yesterday." In a more serious vein, she said, "The people who work on the A.S.I. staff are a wonderful group of people to work with, and I feel very close to all of them. I enjoyed every single moment of my work on campus. The Poly Royal Board has a huge job and yes they are the finest in people to work with. They are all just great."

When asked if there might have been at least a few dark clouds on the horizon during those years, Mrs. Stewart, after a bit of searching said, "Every once in a while I would get frustrated when I saw something that needed changing and I wasn't able to do anything about it." Continuing, with a smile now, she recalled how "it seemed in the final days before Poly Royal was to begin there was just no way we were going to be ready. But somehow we always were."

Mrs. Stewart recalled Carl Beck, whom she called Mr. Poly Royal, as one of the more memorable personalities involved in putting Poly Royal together. Beck, who has since retired, did the most in putting the two day open house on its feet during her tenure, she said.

When asked for her thoughts on Poly Royal, Mrs. Stewart had nothing but praise. "Poly Royal has been characterized as a country fair on campus. But it's more than that. It's a campus wide open house for everybody. I think it's just wonderful."

During her years at the college, Mrs. Stewart saw the student population grow from 4,300 to 10,000. Mrs. Stewart cited the opening of the College Union as the most major change in her work during those years. "The CU involves a lot of expenditures, what with employees, recreational facilities and other needs. It takes a lot of money in and puts a lot of money out. There was quite a commotion there for a while."

Mrs. Stewart's affiliations with this college have not all been financial nor pleasant. She lost the youngest of her two sons in the plane crash in 1966 which wiped out almost all of the school's football team.

Mrs. Stewart's opinions on the young people of today were optimistic. "I think the young people of today are the hope of a world that has lost its bearing. What might appear to be radical actions on the part of a few are actually desperate efforts to improve the situation."

Mrs. Stewart believes that there is such a thing as the generation gap, but feels she doesn't suffer from it. "I have been fortunate enough to work with students closely and thereby avoid the generation gap that others not so fortunate have come to experience."

The Philadelphia-born widow lives in a beautiful house overlooking the ocean. She has been traveling and her grandson as the activities which occupy most of her spare time.

When asked why she had retired, when she could have stayed on longer, Mrs. Stewart replied, "I can't say I don't miss my work, but I felt it was time to retire. I was staking to retire before the quality of my work became less than my own standards."

Problems cut...

(Continued from page 10)

Kelley said he began the system analysis because he has done them in the past and is aware of their potentials. "I started it to help Pete and Mariano accomplish some of their goals. It grew into something which would be of value to all students," he said.

"I was offered six units of 'A', plus using the study as a possible senior project," Kelley said. "I refused. I am doing it because I am involved and it needs doing."

The analysis is A.S.I.-funded to pay for copying facilities and a microcomputer. Kelley is not being paid.

Kelley hopes to finish the analysis this quarter but needs volunteers. Anyone interested in helping can call 546-3011 and leave their name with the secretary.
Student teaches classes

by EVAN DAVID

On a Tuesday evening, between 7 and 10 p.m., a class in ceramics, and one in leather crafting, are in session. These are two examples of the student-organized-and-taught classes that are the hallmark of the craft center. The center (CU II) is a huge, well-lit glass-lined room with benches and pottery wheels, a wood and unused amount of equipment in the cupboards that line the walls.

Segregated into a side room, a dozen leather-students are busy before the benches at the side of the small cupboard, and around a long table. Most are working on leather belts made of prime leather. Little tools and punches are scattered within easy reach. Some belts are being decorated with roses and flowers, detailed with red and blue dye, and decorated with black dye to contrast the colors and leave the natural places in spots sprinkled upon by tools. Other belts have runs of side stripes that are hidden over each other. When the folding reaches a twisted section, the belt is folded inward, between some of the stripes, until the leather weaves a woven effect that seems to begin and end from nowhere.

Instructor Speaks

At another bench to the side sits a young married and long-haired figure who is drawing with a pencil on a poster-sized piece of manila paper.

He is the teacher, Greg Graham, an Industrial Technology major. His drawing hand is heavy with a brush, but the drawing is freehand and lumpy. He is working a striking pair of suede leather pants, hand-cut in the legs, and sewn into the seams and laced up the front.

He is drawing a series of circles representing the construction of a hat. To a student he says, "You cut a hole in the center for the head, and save the outer piece for the top. It'll be large enough if you taper the hat, but not if you make the sides too thin. You have to have room for the head." He continues, "Visualize the cross-section of a hat." Graham draws some lines that fan out at the ends and overlap with others, making the side-view of a hat and showing the different pieces of its construction. "You don't want to use rivets here," he explains, pointing to the brim. "Use them up here where they don't rub your skin.

"Setting off with a piece of paper around his head to find the exact comfortable size. Then Graham turns to you and begins a discussion about the tips and cleverness of leather working—mostly tips. "You can make anything out of leather if you know the basic construction and have some patience, which are the first things I had to learn myself," he said.

"I got into this about four years ago when I told my sister that I would do a pair of leather pants for Christmas and make a jacket for my brother. I gave him a couple pieces of really nice leather and told him to make my own."

Which is what he did. It was the beginning of a hobby that, in a short time, resulted in his working the local leather shops of his hometown Redwood City. "I needed till I got caught up in school, but this is my outlet now," he said.

"You can make anything out of leather if you know the basic construction and have some patience." To a student he may, "If you're interested, I'll show you just how to make these things.
"He informs you he is "also into broadcasting journalism," for he is a disc jockey for KCPR. He works a regular shift. "There's the music side of it, but there's also the electronic side of it. I'm making an 80 watt amplifier and receiver that I designed myself."
"He explains he is also designing and building a fiberglass body for his car. Plus having just spent over 400 hours on a similar project.

"I keep pretty busy."
""Do you ever have any spare time?"
""Not more than about five hours a week."

On that note he wanders back to his convey of pigeons, stopping here to help a girl move the contents of a box, stopping there to assist someone punch a design into a purse.

"If you're interested," he shout over his shoulder as he leaves, "there's a new class starting on May 1st."
by JONNIE T. FUENTES

And by the way, if you hate to go to school you may grow up to be all that a mandala can be changed. Among other factors, the Mandala School is committed to the faith that each child is basically good, uniquely gifted and will naturally reach out to learn, discover and function in the world.

According to Taxia, the children are free to choose their own learning methods at their own speeds. In addition to the three Rs, crafts and skills such as pottery, wood-working, weaving and the like will also be available. Children will be able to pursue educational activities not merely because they are educational but because they are interesting, said Taxia.

The basic tuition for the school, which is scheduled to open in September of 1972 will be $79 per month for each child. A lower tuition based on need may be possible if sufficient scholarship funds are available. Taxia does not compare Mandala School to a progressive nor private academy, but rather as an alternative free school.

"We are hopeful that the school will draw the poor and the rich as well as all the races. We are striving to instill creativity, vitality not the production of automatic conformism."

The ratio for individual attention between staff and children will be one to five. According to Taxia, the most important qualities for teachers or assistants is to have a true dedication and love for children, to have a caring, concerned warmth, and to help children realize their own potential. A typical day at the Mandala school will begin with small, hour-long group meetings with individual teachers. These meetings will be for solving problems, sharing things and for making plans for the rest of the day. The rest of the morning will be devoted to academic instruction. The afternoons will be used for helping the children pursue their plans based on their needs and interests.

As a new concept of learning in the San Luis Obispo community, the Mandala school system hopes to foster greater community interest and support come September. In anticipation of this situation, the Mandala School hopes to realize that education at its best is easily

The word Mandala is a Sanskrit work denoting a "magic circle." The distinguishing characteristic of a mandala is its perfect balance. Taxia said the Mandala School is committed to the concept of balance in an integrated curriculum which draws upon and develops children's inner resources.

Among other factors, the Mandala School is committed to the faith that each child is basically good, uniquely gifted and will naturally reach out to learn, discover and function in the world.

According to Taxia, the children are free to choose their own learning methods at their own speeds. In addition to the three Rs, crafts and skills such as pottery, wood-working, weaving and the like will also be available. Children will be able to pursue educational activities not merely because they are educational but because they are interesting, said Taxia.

Money spent on the dorm and dining hall now under construction does not come from the California taxpayer, according to E. Douglas Gerard, executive dean.

"We get mail from parents and others complaining about Yosemite and the College Union being frills," Gerard said. "People don't want their tax money going into anything but classrooms." Basically, that is where the money goes. The California taxpayer's money only builds the classrooms and administrative offices.

The dorms, dining halls and the College Union were funded through loans, grants and student fees, said Gerard.

Part of the funds for the new dorms came from the Department of Housing and Urban Development HUD.

"The federal government has programs that permit the college to borrow at a lower interest rate—three percent," said Gerard. "This is the plan the new buildings are funded by."

The College Union, Yosemite Residence Hall and even the brick dorms that were constructed in 1959 are on a similar program.

Repayment of the loans comes directly from the user of the facilities, Gerard pointed out. When the loan is repaid, the building becomes state property—because it is on state land. Sierra Madre, the $1.2 million residence hall that will house 505 students and Vista Grande, the $1.1 million dining hall that will seat 580 students, essentially complete this college's long-range plan for residence and dining halls.

The total housing occupancy available on this campus in the fall of 1973, when Sierra Madre is projected to be completed, will be 2,984.

According to Gerard, Sierra Madre is basically the same design as Yosemite. The major difference in Sierra Madre's plaza is the room flexibility.

Yosemite was designed to provide for two, four, or six student rooms, with the closets as the room dividers. The walls between some rooms was a quarter-inch-thick tack board separating the closets. This arrangement provided little sound proofing, and until the walls were sealed, Yosemite had a noise problem.

Sierra Madre is designed with two-person rooms with sealed walls separating the apartments.

According to Robert Hostrum, director of housing, Sierra Madre will not offer single room residences.

"There's a need for single rooms, but for Cal Poly to pay back the loan, we would have to charge $680 a year for one person rooms," said Hostrum. It now costs students $500 a year to live in a double occupancy room.

Hostrum added that students are living in single rooms now, but they could get roommates at any time. "It happens every year in the spring. People move off campus for one reason or another," he said.

However, there were vacancies in the fall, too.

"This is the first time in 10 years there's been a vacancy in the dorms," said Gerard. Because the priority system for admitting students in the dorms has been changed, Gerard does not expect any more vacancies in the future.

This college is the only one in the state college system that does not require its resident students to buy meal tickets. "This allows the student to make his own decision as to where he wants to eat," said Gerard.

Opening in the late summer, Vista Grande will expand the variety of food facilities available on campus.

According to Gerard, the dining hall is made up of two pods, with an area available to build a third when necessary.

The pod closest to the brick dorms will be a cafeteria. The other pod will be a sit-down table service restaurant. Both will be serviced by the same kitchen.

The idea behind the new eating facilities is variety on campus. "The student can buy a meal ticket and eat in the college dining hall," explained Gerard, "or he can eat in the snack bar, get food from a vending machine, eat in the cafeteria or restaurant.

SAN LUIS OBISPO, CALIFORNIA 93401
Traffic eased by bike lanes

by TOM MARRELLI

A song that just hit the charts says “everything good is bad, and everything bad is good.” Those words seem to sum up the mixed feelings toward bike lanes on this campus.

Eight months ago bike lanes were marked along the perimeter roads with the main purpose being safety and convenience for the student. The question remains whether the lanes are being used, and used correctly. According to Peter K. Phillips, facilities planner, “They are working and working quite well.”

Phillips said that the lanes were installed at the same time as the incoming lanes along Grand Avenue was widened to two lanes. According to Phillips, bike lanes are not installed along the interior roads because they are blocked from automobile traffic.

Entries soar in livestock show

The animal science department’s annual showmanship contest will begin at 3 p.m. Saturday with a record number of contestants.

There are 135 entries competing for the top awards. Beef, sheep and pig entries will be shown by students from many different majors. The Beef Pavilion is the site for the colorful, beef cattle showmanship category. The Pavilion will include Hereford and Angus bulls, heifers, and steers, as well as crossbred steers. Fifty-five beef animals will be shown at the pavilion.

Judging the beef contest will be Tom McCord, fieldman for the American Hereford Association, according to Bill Jacobs, an animal science instructor.

The sheep unit is the place to be for the wool production competition. More than 60 sheep will be paraded around the ring while vying for the championship award.

Judge Bob Cummings will be choosing the top sheepshowmen from classes of Hampshire and Suffolk ewes and rams and market lambs.

All the hog unit, visitors will see about 15 pigs in competition.

“This is the largest turnout ever in showmanship competition,” said Jacob, “there will be twice as many sheep shown this year.”

The winners in each of the respective contests will receive ribbons while the top two beef, sheep, and hog showmen will be presented the champion and reserve-champion award banners.

Public dazzled

The annual open house at 48 academic departments for Poly Royal will attract more than 40,000 visitors to the campus. Engineers will tell the story of how they relate to today, architects will transform their school with into glimpses of future leisure, mathematicians from all over the state will flock to a math contest that has become as popular as a teen dance, and the public with computerized graphics.

Bike lane is bike's delight

Senior engineering major Terry Shippy commented, “I don’t have to fight the parking hassle anymore. The lanes are convenient and I can get to classes faster.”

Mike Thomas, a city and regional planning sophomore, said the bike lanes make it, “a lot easier getting around campus, but at the intersections there is a hassle when riders don’t stop or turn correctly.”

One of the few complaints came from Peter Scarborough, a junior math major who said some streets have only one bike lane and “it becomes confusing with two bikes going in opposite directions in the same lane, however the theory is good.”

Senior Jim Farrell, a food industries major, said, “They are good, but are not all the places they should be, They should be marked in the interior roads.”

Farrell also said the bike lanes make it much safer for bicyclists as opposed to downtown, “You’re not afraid of being run over here, like you are downtown.”

Over 100 people have been active in planning this year’s Electronics Club Poly Royal display to illustrate that “Engineering is Alive and Needed.”

Explanations on how to use Hi-Fi equipment, and the equipment will be shown. A synthesizer room will also be on display which was developed as a senior project.

The Curriculum display will include lab experiments and visual aids such as “Many buttons and knobs to turn,” according to Joseph Olthoff, Electronics Club president.

Senior projects will be displayed and each class will have a separate presentation. There will also be microwave experiments and computer related projects.

The projects can be viewed in Engineering Building rooms 110, 114 to 117, and 119.

Student helps with developing public relations internship

by CONNIE GARCIN

Journalism student Mary Robinson has helped to achieve what may be a first in developing a valuable internship program in the area of public relations.

Miss Robinson learned last winter that the Santa Maria School District was attempting to implement an extensive public relations program but was restricted by lack of trained personnel and money.

At the time the Santa Maria Elementary Education Association recognized the value and need to support such a program. They offered to help underwrite the meager budget for equipment and supplies.

Written media, radio and television were being considered as chief communicative tools for the proposed public relations program. Cora Monti, a full-time kindergarten teacher in Santa Maria was selected to direct this ambitious undertaking.

Miss Robinson recognized the potential for the development of a public relations program in the school district if the program was adequately manned. She volunteered her services, without pay, offering to demonstrate that students could make a valuable contribution while getting first-hand experience.

Miss Robinson said she got many valuable suggestions and guidance from her instructors—Dr. Olaf Isachsen, Ed Zufich, and Vincent Gales, who were always supportive and encouraging.

Hoping to aid the program, Cable TV Channel 4 in Santa Maria, offered a 15-minute segment of time each week as a public service radio station KBA, KSON, and KUHL offered time for 3 to 5-minute spots daily.

The objective was directed towards getting these programs co-ordinated. The television programs were taped in classrooms or wherever students and teachers were working. The purpose of the show was to acquaint the public with methods of teaching being used in the school district. Information on school issues were also filmed and aired. Miss Robinson acted as moderator and interviewer on the programs.

Santa Maria principals and faculties were already burdened with work and lacked the time needed to be television performers. Miss Robinson and Mrs. Monti persisted in encouraging and urging their participation.

Things began to fall in place. The results were astonishing and encouraging. Listeners reacted favorably to the program, and Cable TV Channel 4 began to advertise the program four times weekly.

Miss Robinson took charge of three loving gift that will rapture forever the memory he'll never request to the mother. What more filling (luding with love, The Mother's Ring were available at her

Nine pages of college athletics in this section

Cal Poly San Luis Obispo is making more and more becoming recognized across the country through its achievements in sports. The long list of athletic teams that represent this college is continuing to grow year after year. The teams are earning continued success not only on the conference level but on the national level as well.

Among the accomplishments of this college, the wrestling squad has won the national college title for five years in a row, the football team has won the conference title for three consecutive years, the rodeo team has won three national titles, and the tennis team has produced two all-Americans in the past year, while the track team has produced national place winners.

The following nine pages (315-323) take a look at the achievements of Mustang teams this year as well as the success of individual standouts.

This quote pertains to three top baseball prospects for the future. These ballplayers are Dave Bow, Dave Oliver and Mike Krukow, all of whom have become successful baseball players. "Most of our players can be baseball prospects for the future," exclaimed Coach Angie Carrillo.

"I have a few things going for me that I think offset it." Simmons thinks he will make the starting height of 16-4 at the Olympic trials this summer. "He's getting stronger, and as soon as he gets strong enough to get on a bigger pole he'll go 17." Neilson is a 19-year-old freshman from Helsingor, Denmark. He is a middle-distance runner concentrating on the mile and half-mile. His best time over the Olympic 800 meters is 1:49.8 with a 4:06.0 in the mile. He is a member of the Danish National team and a prime prospect for his country's Olympic team.

Simmons said, "I feel he's the best mile and half-mile runner ever to enroll here as a freshman, but his best marks won't come until his sophomore year." Neilson admits that part of his problem so far has been simply adjusting to his new environment. He arrived in March at the beginning of the Spring Quarter and spent the first two weeks getting used to the time difference.

"I was sleeping during the day and awake at night," he said.

(Continued on page 27)
Tops in wrestling...

by RICK KNEPP

When the Mustang wrestling team wrapped up a successful season by walking off with the 1973 National Collegiate Athletic Association College Division Championships, the attitude expressed on this campus was not one of joy and pride. Rather, it was the fifth in a row for Coach Vaughn Hitchcock's squad, and the sixth in the last seven years. This does not excuse the lack of enthusiasm generated. In fact, the pleasure should double. There is much more to be proud of. In Hitchcock's reign at the Mustang helm, he has coached no less than 80 all-Americans. Seven were added this year. They are Gary McBride, Mike Wasmum, Allyn Cooke, Keith Landal, Pat Farner, Larry Morgan (the only

difference should be our

doubles," he added.

The league next year should really be something," said Jorgensen. "San Fernando Valley State is always tough. Cal State Bakersfield is going to be powerful and I look for Cal State Poly to put in a good showing," he added.

The Mustangs are losing only two players next year when Martin and Kent Cobia lose their eligibility. Lambert, Harold Ertelt, Dennis Seullion and Kevin Kennedy will return to bolster the line-up along with the addition of Lambert's brother, Paul.

"The thing that really pleases me is that quite a lot of students are taking up an interest in the sport," he said.

with the addition of Lambert's brothe

at Poly to a remarkable 18-3-2. He has been honored as a College Wrestling Coach of the Year.

"This year we met some of the top teams in the nation. We were able to hold our own against them, and, while we didn't win every meet, the seasoning allowed us to successfully defend our national title," Hitchcock said.

Among those teams encountered were Iowa State, NCAA University Division champ, and top contenders Oklahoma State, Oklahoma, Oregon State, and Washington.

Recently, the Mustangs played host to a touring Japanese national team. These were the wrestlers who will represent their country in the 1973 Summer Olympics in Munich. The matches were wrestled under international rules, which call for free-style wrestling, a variety foreign to most of the local combatants. Still, they put up a game fight, winning one and

drawing two of the seven matches scheduled.

Hitchcock looks forward with enthusiasm. "Next year's team has the potential to become the best team in Poly history." This would also make it the best team in California's history, a distinction another Hitchcock squad now holds.

"We will be highly experienced in national competition, a most important element in our title defense," the mentor noted. All seven of this year's all-Americans will be returning to next year's roster. There will be some holes that will need filling, and Hitchcock is looking at prospects now. One, Gary West, who redshirted last season after transferring from the University of Oregon, was the lone winner for the Mustangs against the Japanese.

"The 1973-74 schedule is one of the toughest that any team in the nation must face. It is also a vastly improved home schedule, with some truly great teams in the Men's Gym," Hitchcock finished.

Fans in this area can again look forward to some top notch wrestling next year.

Tennis team nets two all-Americans

by KEITH ELDRIDGE

"It's really hard to have a good tennis team here because there is no way that we can recruit anybody," said Mustang tennis player Tom Martin. The fact that no scholarships are awarded doesn't work out for some construction company," he said.

This place, I would like to go to camps that I would like to work, I want to. Rather, it looks on the tone of a flat "What

ranked in the top 10 nationwide at all levels continuously since 1967. This season's 18-4 dual meet record boosted Hitchcock's total

of the six-man team, two

members are National Collegiate Athletic Association College Division All-Americans. Sophomore architecture student Dan Lambert and senior physical education major Martin both achieved the position of honor last year. In earning their all-American status, the duo led the Mustang tennis team to sixth place in the nation. "We won all but one of our total points," said Martin about Lambert and himself.

"This year was different because our top four players are pretty strong," said Lambert. The NCAA nationals allow four members from each team that is selected to play. Should the home forces fail to qualify to send the whole team "then we hope to send our top two players, Dan Lambert and Tom Martin," said Coach Ed Jorgensen.

"I have two years of eligibility after this one but I don't think that I will graduate for two years after that," said Lambert. "In the meantime I do a lot of teaching tennis on the side. There are quite a few summer training camps that I would like to work at," he added.

"When and if I graduate from this place, I would like to go to work for some construction company," he said.

Martin, Lambert's doubles partner, chooses to keep in closer contact with the sport.

"Next year I have a job giving lessons at a student housing facility here in town," said Martin. "After I graduate I'm considering to try the pro circuit just to see how I would do. If that doesn't work out I think I would like to become a tennis coach," he added.

The only competition that the Mustangs will receive this season in the California Collegiate Athletic Association is from another team. "It seems that the team to beat this year is Valley State," said Jorgensen. The San Fernando Valley State Matadors are the defending champions.

League competition is played at three different times throughout the season. The three round robin affairs take place at San Fernando, Fullerton and here.

"We're better than Valley State," said Martin. "The level..."
TRYING FOR FOURTH TITLE
Rodeo team puts on royal show

by JERI TOMMON

Shooting for its fourth national championship, the rodeo team will be displaying their talents in a competitive rodeo today and Saturday during Poly Royal. Over a half dozen colleges will be competing for honors in front of what promises to be a sell-out crowd.

Team advisor Bill Gilford remembers the first official rodeo team at this college of which he was a member. Gus Beck was the advisor at that time, and he was also the man who encouraged the start of local rodeo competition. A history of rodeo competition started here before it ever started intercollegiate. It was also the springboard for other coastal teams to organize.

In the years that have followed, the team has acquired a host of honors. It has won the National Finals Championship three times so far this year, the team has travelled to Reno, Flagstaff, and Shasta, among other distant cities for contests.

The team boasts a roster of immensely talented young people, five men and three women. The two Ferguson brothers, Tom and Larry, are, in Gilford's words, "two of the toughest competitors we've ever had here at Poly. Pressure doesn't bother them. The more pressure the better in most cases," he said. Tom is leading the West Coast region in calf roping, ribbon roping, and steer wrestling. Larry is standing third in calf roping and steer wrestling.

"Our two outstanding stock riders would have to be designated as Dave Clark and Lee Rosser," Gilford said. Clark, new to the team this year, had one year of competition experience at Bakersfield Junior College. "He's probably one of the beat bull riders we've had here," he added. Dave is currently first in bull riding and bareback riding in the West Coast region.

"Lee Rosser is the most capable freshman we've ever had on our team without a doubt. His main event is the saddle bronc riding, a classic event which takes a lot more time and skill to perfect than perhaps any other event in rodeo," Gilford observed.

An all-around cowboy, Lee is first in saddle bronc riding and fifth in steer wrestling, while placing in ribbon roping and calf roping in the West Coast region. An ag-business major from Marysville, Lee's father is Cotton Rosser of the Golden State Rodeo Co. and a team member of Gilford's on Poly's first rodeo team.

John Seymour, the 1972 Rodeo Club president, learned his rodeo competition at this college. In his last year with the team, John stands second in bareback riding, and also places in bull riding.

On the women's team, Gilford says, "We're better this year - we lost our three seniors - all in one year - two years ago." Colleen Semas, a sophomore transfer student, leads the barrel racing in the West Coast region. Colleen Semas, a sophomore from Auburn, is captain of the women's team. "I would think that at this point, Colleen is just about the best break-away roper.

Cagers end season with best showing in 17 years

by KEITH ELDIDGE

Not since the 1964-65 season has any Mustang basketball squad ever placed first in the league. This year’s team ended the drought by virtue of a three-way tie with San Fernando Valley State and UC Riverside for the top spot of the California Collegiate Athletic Association.

Five records were broken during the season which saw the locals pick up 18 wins in 28 outings. Two of the records were captured by a single player. Junior forward Billy Jackson smashed his own record in sinking the most field goals in a season. The over mark stands at 221 successful attempts — 33 better than his former record. Jackson also became the highest single-season scorer. He supplanted Mike LaRocche who in the 1966-67 campaign scored 660 points. The premier game of the season was the 1968-69 campaign scored 221 points. In order for Jackson to top that mark he had to notch eight starts in the final game of the season at Fresno State. He passed LaRocche with ease totalling 221 points.

The San Fernando Valley State contest played in the Men’s Gym accounting for three records. The game featured the biggest win, the biggest loss, and the biggest points total in the contest played in the Men’s Gym. The locals started the season on the right foot stomping on UC Santa Barbara in the opener on their way to four straight wins. The Christmas holiday momentum was terminated as five consecutive losses were collected. Three of the defeats were obtained in the road.

When league action resumed in the Winter Quarter “we improved as the season progressed,” said Head Coach Neal Stoner. “December is sort of a test month. We try to be strong by February,” he added. The home forces came from behind to force the three-way tie for the conference title.

Next season will see the return of four starters as only four of the team members will not be returning. Seniors Randy Genung, Mike Jackson, Alan Gage and Rick Stickelmaier have all lost their eligibility.

Junior Billy Jackson and Robert Jennings along with sophomore Pinky Williams received the top honors, They were joined in the All-Conference line-up by Sam Cash of UC Riverside and Paul McCracken of San Fernando Valley State.

Jackson repeated as an All-Conference pick in the forward spot and as the league’s leading scorer with a 21.8 point average. Two records were broken by the Junior physical education major as he picked up 564 points on 436 field goals in the season. “I don’t worry about records, I just play,” said Jackson.

He came here from Monrovia.

(Continued on page 26)

CONFERENCE CHOICES
Three locals in top five

by KEITH ELDIDGE

When it comes to playing basketball, “we try like hell,” says head Mustang basketball coach Neal Stoner. Here’s proof:

Three of his players were selected to the California Collegiate Athletic Association all-league first team this year.

Juniors Billy Jackson and Bob Jennings along with sophomore Pinky Williams received the top honors. They were joined in the All-Conference line-up by Sam Cash of UC Riverside and Paul McCracken of San Fernando Valley State.

Jackson repeated as an All-Conference pick in the forward spot and as the league’s leading scorer with a 21.8 point average. Two records were broken by the Junior physical education major as he picked up 564 points on 436 field goals in the season. “I don’t worry about records, I just play,” said Jackson.

He came here from Monrovia.

Basketball...

(Continued from page 28)

"Bob Jennings deserved to get it," said Bomer in reference to the all-CCAA pick. The Industrial Technology major led the locals last season in scoring percentage from the floor.

"We want to use Jennings on offense more next year," said Jennings. "I've improved quite a bit over last year. I have more confidence, my shooting is a lot better and I work especially hard during workouts," he added.

Being a native of Los Angeles, Jennings appreciates the clean air and beautiful country that

Fencers earn national recognition

... by JANINE TARTAGLIA

Touché away! The white knight, after crashing through a window, flings himself across the room on a chandelier and plunges his trusty sword into the chest of his foe. For many years this familiar scene has depicted the ancient art of fencing. To the fencing team of this college, its sport is as refined as the foil and sabre. The sabre, used by both men and women, is usually thrust in a chopping motion with a flat, thin blade and is usually thrust in a chopping motion with a flat, thin blade. The sabre is a factor in her team's showing.

Barney Ousenske, for his masterful use of the epee, placed third in the Western Intercollegiate Fencing Conference Tournament in January. The previous weekend, he claimed the Northern California Intercollegiate Fencing Association title.

Track predicts

Good start by swimmer

by ERIC NOLAND

Unlike most freshmen, UC
swimmer John Reynolds was to
withdraw from school tomorrow,
a more than impressive mark
would be left on the college, its
athletic conferences, and the
National Collegiate Athletic
Association.

Reynolds literally rewrote the
swimming record books in this,
his first season as a Mustang,
establishing four new individual
marks and contributing to one
new relay record.

Despite a rather disappointing
season for his team, Reynolds
maintained consistency at a high
level—first place. The victories
came in his most familiar event,
the 500-yard butterfly, and were
not rolled-up against weak op­ponents.

In the first dual-meet outings of
the season, John took on the best
that Cal State Hayward and UC
Santa Barbara had to offer. In
both contests he came out on top
and found little company in the
Mustang half of the winner's
circle.

It is significant (and somewhat
astounding) at this point to note
that prior to this season, Reynolds
had never done 500 yards
of butterfly. In high school competition the longest
race for the stroke is 100 yards.

When faced with the job of doing
the 500-yard race this year John
admitted being "against the first
time." Nevertheless, he set his
sights for the moon and vowed to
take a shot at an 11-year-old
school record.

He shattered that one in style—
at the conference championship.

Football champs step into world

Record-breaking quarterback takes high school coaching job

When Steve Breanahan stepped into the limelight as the football quarterback last fall, there were people in some circles who seriously doubted he could handle the assignment. They said his 6'9" height would prevent him from doing anything of value at the key position and that he would never come close to filling the shoes of his predecessor, Don Milan. During his senior year here, Milan had set four school records and was an all-conference, first team selection. It was a tough act to follow, but Steve certainly wasn't going to let his lack of size hinder him. The determined senior passed and ran with consistency and excellence through the season. He played (two were missed with an injury) and led his team to its third straight conference title.

The season's performance saw him erase two of Milan's marks and replace them with his own figures. He also broke five records established back in the early 60's and was voted to the all-conference, first team. Breanahan's head coach, Joe Harper, passed off the lack of size, "I don't think it was a factor at all." Steve himself would be the first to admit the disadvantages of not being able to see over the tall defensive linemen, but he merely relied on colossal arm strength to make up for it.

Baseball success.

(Continued from page 8)

developing his skills. After having played a year for the Mustangs he says, "The program here is outstanding because it is coached, organized, and structured in a manner directed toward winning baseball games. All of us involved in the program have a tremendous desire to participate at a competitive level and be winners."

The Mustangs have been almost the entire pitching staff and the entire Mustang outfield. Garrido said, "With the loss of many veterans, this year has been similar to the 1970 season. We had hoped to rebuild and come back strong next year just as we did in 1971 when we finished with a 36-11 record."

The Mustangs started the season off red hot as they rattle off an 8-4 record in the 10 games. Sophomore Mike Krakow continued right where he left off last year in 1971 as he posted a 4-0 record through these games. Since then the Mustangs have simmered down, due to injuries of two first-string players and now have a 22-13 record. There is much to be gained in the remaining games. However, Garrido is hopeful for the future of the baseball program, one which promises to be exciting in the upcoming years.

He feels that the team's strength is the fact that a lot of young players are playing college ball for the first time. Garrido cited Ted Bailey and Larry Silveria as showing a lot of poise and maturity in their first year of college ball. He said, "We have the potential to play very good college baseball in the years to come with our fine personnel."

The Mustangs have been one of their bright spots this year. Pitching Coach Berdy Harr has been extremely pleased with the pitching of Krakow, Les Ohm, and Dennis Root. CCAA Ohm and Krakow have only pitched two years but in these two years Krakow has 14 wins and Ohm has 16 wins and seven saves.

The locals will be home this weekend with four big games scheduled. San Fernando State, leaders in the CCAA, will open with one game on Friday and a doubleheader on Saturday. The Mustangs will top the Poly Royal weekend off by playing an Alumni game on Sunday. Such past Mustang players as Doc Kline, Glenn Egusa, and Steve Freeborn will participate in the game.

Rodeo team . . .

(Continued from page 14)

in the region, although she is not standing that high at this moment," Gilford commented. "She is a real top roper." Freshman Linda Gill rounds out the women's team roster. "She's a real athletic girl whom I'm sure in another year will be a real tough competitor," Gilford said.

The men and women of this year's team, as well as teams in the past, have definitely earned the nationwide respect that is given to them.
A CHECKING ACCOUNT DOESN'T HAVE TO BE CONFUSING (NOR DOES IT HAVE TO BE EXPENSIVE)

Bank of America introduces the College Plan. Here’s what you get:
- LOW COST only $1 a month during the school year.
- NO CHARGE in June, July and August. Get a year-round checking account at nine months cost!
- MONTHLY STATEMENTS 12 months a year.
- ALWAYS OPEN even during the summer—most college checking plans have this feature. You can keep your account open throughout the summer with a zero balance at no charge.

SPECIAL LOW COST CHECKS or, if you wish, for a small additional charge—beautiful, full color scenic checks that show sporting events or California scenery from the surf to the Sierras.

OPTIONAL SERVICES TO AUGMENT YOUR COLLEGE PLAN CHECKING ACCOUNT: Instant Cash—which protects you against the cost and inconvenience of overdraft checks. Plus our widely popular STUDENT BankAmericard.

COME IN TO YOUR NEARBY BANK OF AMERICA BRANCH SOON. Find out about this new service. Ask any teller or pick up a copy of our booklet THE COLLEGE PLAN which gives all the details.

BANK OF AMERICA

Bend a little every day.
It's a good habit to pick up.

Imagine what would happen if every man, woman and child in San Luis Obispo picked up just one piece of litter every day. Think how much cleaner our town would be. How imagines what would happen if everyone picked up two or three pieces of litter every day.
All of a sudden, the litter problem wouldn't be the problem it has been for so long. It's that simple.
But it's face it. We'll all have to bend a little. Every one of us.

Bedlame anti-litter slogans haven't stop-
ed the litterbug. Threats of a fine haven't stopped the litterbug. Words simply haven't worked.
It's time to stop talking and to start picking up.
The Pepsi-Cola Company of Santa Maria would like to help in the best way we know.
By starting at home.
We're asking everyone who works for us — drivers, secretaries, executives, everyone — to pick up litter. Not just pass it by.
Bend a little yourself. It's a good habit.
In time, even litterbugs may pick it up.

Brought to you as a public service by the Pepsi-Cola Bottling Company of Santa Maria 815 So. Blosser Rd. 922-7807
