The EOP program was allocated $20,000 for the fall program by the Summer Interim Committee in a meeting held here last Thursday.

Approval was granted for the release after three proposals had been turned down by the committee. Mike Moring from the finance committee introduced the first proposal that had been agreed upon in a meeting held earlier in the day.

The proposal was that $24,000 be released to the program with a three being placed on $6,000, its share to be decided by SAC in the fall.

The second proposal was that $14,000 be released to the program with the remainder being held for release by SAC. This proposal along with one suggesting that $14,000 be released were defeated.

SAC had been requested to act on the matter by the program so they could make the packages for fall EOP students.

The original request for $42,700 by the EOP program had been turned down by SAC in the spring and they had allocated $24,000 for the fall. The request from the program had been made before the state had granted any money toward funding it and the allocation by SAC had been made before the state had granted the program $8,000.

When Pres. Robert Kennedy signaled the budget he stipulated that certain conditions had to be met. SAC Pres. Robin Baggett, said at that time the budget would have to be realigned since the program had received funding from the state.

Lizette Salter, financial aid technician, said the only effect the realignment should have on the program is that there will be less money to distribute to qualified students. He said the money would be used to help students who have completed applications and their family income is $4,000 or under.

The committee approved a request from Beggett for $800 to be taken from the contingency fund and used for the payment of dues to the California State University and College Students Presidents Association. The 1973-74 ASI officers budget had proposed that only $1,000 be set aside for the dues, however the association set dues at $1,800 for universities with reduced rates being given to state colleges.

The committee passed an amendment to the reserve at a meeting pooling the general fund of Mustang Stadium which was approved earlier this year. Under the amendment faculty and staff members would not be eligible for the reduced rate of $13.00 for season tickets and $8 for reserved seat per game but would be encouraged to purchase an ASI associate membership card and purchase tickets at the student rates.

A discussion on the proposed College Union name change was postponed until today's meeting.

Meet ends in mock Olympics

A mock Olympics will highlight the third annual California Physical Education Workshop for Women currently being held at this University.

The mock Olympics will be held at the end of the two week workshop that began last Sunday and will continue through next week. Some 60 secondary school teachers are attending the workshop from all over the country. Fifteen are from out-of-state and two from Hawaii.

Teachers from $11 to 61 years old are taking classes in different sports from some of the top experts in the respective fields from the state and nation. Workshops in dance, swimming, basketball, badminton, tennis, volleyball, flag football, golf and many other sports are being offered.

Next week when the men's workshop starts they are going to hold coded workshops in bowling and archery.

"There are few workshops like this in the country and some teachers just come to see how the workshop is run so they can organize one in their own state," said Trish Moore, director's assistant.

"Many of the teachers have not taught P.E. for several years and are here to refresh about teaching sports," she said.

The teachers spend the weekdays in workshops and at nights from 7-8 they hold different tournaments against each other.

After 9 p.m. many of them travel downtown to continue their bowling and pool competition. Several women get up at 9:30 a.m. to jog a few miles before breakfast.

A state has been placed in the category where the teachers all live and the only regret that the woman have by the end of the two weeks is that they have gained weight during the course of the workshop.

Volleyball topic for SIC

Appropriations for an NCAA recognized volleyball team at this school will be major topic before the Summer Interim Committee at its meeting today in Room 219 of the College Union.

According to Baggett ASI Pres. Jeanne plotz, the volleyball team could be provided by the school.

Volleyball has been an unrecognised activity on campus in past years. Practice sessions due to the unrecognised status had to be held at 8 a.m. in the men's gym.

Coach for next year's squad will be Max Boveri, who will be an assistant football coach during the fall and will step into active guidance of the team at the conclusion of the season.

With some practice games scheduled during football season, Max Boveri will be acting coach until Lane assumes his duties.

Volleyball season extends into early spring and, like wrestling, is built around tournament rather than league competition.

Scheduling for the teams had already begun, according to Baggett. Preparations are being made for eight home games and the all day tournament to be held on campus.

Also on the agenda for the three day meeting will be a request from Skip Kelsey for more funds for his Cast 22 project. Cast 22 is the project name for the computerization of all code and bylaws from the state level down which effect student government operation.

The name change for the College Union is another topic scheduled for discussion by SAC. According to Baggett, SAC will be asked to make a recommendation to the College Union Board of Governors on an acceptable name.
Dirty politics: promise game

By MALCOLM STONE

I grew up with the unshakable conviction that politics was a dirty game. This was not a conviction gleaned from a lifetime of experience, but from the mouths of others.

I never took the position that there was anything innately wrong with dirty politics—just that Everybody accepted it as a fact of life.

Politicians have never attempted to make it out to be something more than a rough and ready business of glory and promises. A favor here for a favor there, just a little a back room dealing between me and you.

I’m a lifelong skeptic who believes anything good is also bad. I just marked time waiting for the dirt to show.

Bayciston (you’ll remember his first name is Tom) was dumped in the mud and bumped back as Mr. Clean. Senator what’s his name got tossed in the Bin bag.

Sincerely
ROBIN RAGGETT
President

TAX UNFAIR

SIC opposes utility tax

Note: At the last SIC the body made a decision to oppose the proposed 5 per cent utility tax. SIC directed me to draft a letter to the City Council stating its position on this inequitable tax for the students.

Here is the letter:

Sirs

The Summer Interim Committee of the Associated Students, Inc., at California Polytechnic State University representing 12,000 students has discussed and concluded to take an opposing position on the Utility Users Tax Ordinance of the City of San Luis Obispo.

We, for the following reasons, oppose this ordinance:

1. This tax would not be equitable due to the fact that an increase in the rental rates of apartments and houses would result, thus imposing the burden of said tax upon the student renters; 2) This tax would also be inequitable due to a person’s ability to pay. In premise one, it was concluded that students would be incurring the burden of said tax.

The students (or as the city refers to them, the “tourists”) do not have the ability to pay because of their low income structure; 3) There are no specific plans or guidelines for the use of said tax. The revenue of tax going into the General Reserve is inadequate. Though some plans have been mentioned, namely the improvement of city parks. These same parks which have placed restrictions on student use. Your own City Parks Commission tried to put an off-limits sign on students and their social gatherings no less then three weeks ago.

The proposed utility tax could further increase problems with rental security deposits as some owners or managers charge the pending tax in the deposit. This could cause a tremendous gap between the students and the community.

We feel that the burden of the 1/10 per cent tax will fall most severely on student tenants. Since approximately 75 per cent of the apartments and houses in this city are rented by students, it seems unjust to place this additional burden on them.

We, as students, realize your problem with providing services to this city. We also realize the importance of student-community relations. Thus, to favorably promote these relations, we recommend against levying this tax.

Sincerely
ROBIN RAGGETT
President
I want my kindergarten students to know that they really do take up space...that they are important.
Mandala school...

(Continued from page 3) After one year of teaching at Paasadna Junior High School, Paul Hovmapian said he realized that a class of 30 students is too large “to meet the needs of each child.” He said he had difficulty disciplining a classroom full of students who were “bored, having family problems, or experiencing other problems.”

He said he saw the lack of caring attention to students. “The students weren’t allowed to do what they wanted to. I didn’t feel good about teaching them stuff they didn’t think was important,” he explained. “I was left pretty much alone. I didn’t receive that much help,” he said.

During the last few months of teaching, Hovmapian said he felt “more comfortable” with his teaching position. He considered teaching in Paasadna for one more year. On July last year, he was one of the 160 people who attended a general meeting for Mandala school. By the end of July, he knew he would not return to the public junior high school. Instead, he served as a volunteer at Culver City’s private free school, Play Mountain Place from September to December. With the belief the “children are naturally curious” and do not need to “depend on adults” to tell them what to learn, what to do, and how to live,” Hovmapian said he looks forward to his teaching experience at Mandala where the goal will be “an active concern for each child.”

“Kids should learn from doing things they are interested in,” he said. “Not by doing what other people say is important.”

After four years as a child development major here and working in nursery school open air classrooms Joanne Moylan said she “was inspired by the children” she has met. “I believe that children are capable of making their own decisions. And it’s really far out to watch them do it,” she said. “They are not as dumb as we think they are.”

M. Maylan, who will instruct seven and eight-year-olds, called teaching to 30 to 40 students at once time humbling. “In a public school teaching situation, I think I would always be reaching out to a group, never one or two people.”

An “unusual motivation” has caused Mr. Hovmapian to be involved with Mandala School. Hovmapian has two daughters, Susan who is eight, and 10-year-old Nancy.

He described both of his children as being successful in public schools. Hovmapian recalled he was a successful student in public schools, but an unhappy one. “It’s not a matter of getting grades, but being unhappy with what you are doing,” he said.

Former aerospace engineer for General Dynamics in Pomone, Hovmapian will serve as the business manager and the science and math teacher at Mandala. During his one year of math instruction at this university, he found the continual student turnover frustrating.

“I dealt with so many students, well over 100, for 10 weeks. Then I would get a new set. It was virtually impossible to deal with them as individuals,” he said. “It was impossible to establish long term relationships.”

Hovmapian explained that parents will have an active voice in deciding what materials will be presented in Mandala classrooms. Once the school starts in the fall, he said a nine-member board of directors, which will include three parents, will be formed.

Despite the deficiencies mentioned, the talent Sunday evening was qualitatively good. Jack Spencer got the show all the way up to speed. The audience was warmed up and later that night they fell flat on the ground with some Randy Newman's and a very believable version of Elton John's "Rocket Man." He impressed even the guy who is familiar with his voice and its capabilities, and he quickly won a affection of a scattered crowd.

An hour later Gary Elter, a veteran of the Concert Under the Stars, entertained some people, some with some slightly older tunes from Simon and Garfunkel and John Sebastian. But Elter deserves credit for his efforts as a guy who is still a lot of fun to watch. He turned out a convincing interpretation of something that a single musician would not ordinarily try.

The inevitable monotony of hearing only one voice was broken by the addition of Elter’s group on a few songs. All that can be said is that they really had it together for something that was evidently well prepared.

During a break between performers, Janet Wilson came on to last week with another little plateful of the gratuitous music—tomorrow night a show about a music.

By this time the weather had become considerable colder, and people were huddled together in groups here and there trying to keep warm while listening to Jim Rowell was also trying to keep warm. Rowell sang some Bob Dylan, Carla Bley, and Jimmy Taylor in a mellow, rich voice. His easy-listening music worked to warm up a physically cold audience.

A last minute addition to the concert afforded it with something it desperately needed—variety. The crowd was surprised by the upbeat electric sounds of a country-rock group called Dog Ages Local. Their monotonous sounds were refreshing even though those voices could have been more together. Their music evoked the sound of mellow music they played a predominance of Dan Hicks rock’n roll hits and the humorous "Milk Shakin' Momma." But it was dark and cold and the concert had definitely reached its climax. The audience as well as the performers could be considered for their efforts in surviving what fell like one of the coldest nights this summer. Next week the cold won’t be a problem as the concert will go indoors one week and turn into a Coffee House.
Students give impressions

If you were to suddenly find yourself embedded in a culture thousands of miles from your own, how might you react? How many of your reactions would be preconditioned?

When first impression reactions were sought from six of the 13 Japanese students who have currently immigrated Stanley Glen, the responses were based around a single factor: The United States has had enough influence on Japan, and undoubtedly vice-versa, that the culture gap has become bridged to a large extent.

One of the girls, Sue Kudo, stated that nothing seemed strange, everything was just about what she had expected. But could one ask if a student would see things differently had she not been told what to expect?

The Japanese students, who range in age from 15 to 23 years, were chosen within their schools to come to the West Coast under the sponsorship of Christian Hospitality International. The majority of them are high school students who attend Protestant schools, live in Japan's cities and surrounding suburbs and can be labeled, if need be, middle class.

They are here primarily to study English as a second language, and as more popularly voiced, to see what America is really like in "our own eyes" rather than through "other sources.

"In Japan it is very important for us to be able to speak English," said Germaine Alavas, a helpful young translator. "Especially if we want to pursue a higher education. English is a required course throughout high school and an efficiency test is constant use of keys. "We can't lock ourself out of the American people," she added, "we kill other people's privacy, interfere with each other's privacy they did share surprises at the constant use of keys. "We can't even go to the bathroom without locking ourselves out of the room! Only in some parts of Japanese cities do people use keys to such an extent, and in Japanese cities do people use keys to such an extent."

Japanese students who attend Protestant schools, live in Japan's cities and surrounding suburbs and can be labeled, if need be, middle class.

They are here primarily to study English as a second language, and as more popularly voiced, to see what America is really like in "our own eyes" rather than through "other sources.

"In Japan it is very important for us to be able to speak English," said Germaine Alavas, a helpful young translator. "Especially if we want to pursue a higher education. English is a required course throughout high school and an efficiency test is included in college entrance examinations. However, although they are required to read and write English, the students have little chance to speak it and this is one of the reasons the travel program was developed."
Students who think of quality first think first of Ross Jewelers

On a drowsy weekend, take advantage of the Central California sights. Weekend trips don't have to be limited to back-packing or sunning on a beach. A 40 mile jaunt north of San Luis Obispo to Hearst Castle at San Simeon might be just the visit which really tops off a summer.

If your interest is tapestries, paintings, sculpture, or architecture, it is there—expertly rendered—on the meticulously manicured 123 acres. The mansion juts 137 feet in the sky against the rolling background of Sancto Lucia Mountains.

While touring through the three guest houses which comprise 44 rooms or the 100 room, main mansion, what the eye may behold is worth the drive. As you pass through 400 year old Spanish doors, tread upon Roman marble floors, surround yourself with 500 year old choir stalls from Catalonia, look above—to life-sized carvings of saints from the 16th century, famed interior decorator Julia Morgan was responsible for coordinating Randolph Hearst's momentous art collection into a pleasing, liveable atmosphere.

Sports enthusiasts may delight in seeing the 104 foot long, outdoor Neptune pool. Inlaid with Vermont marble, the pool has a 340,000 gallon capacity and a depth which ranges from three and a half feet to nine and a half feet. The Roman pool may be to the preference to those with sensitive skin. The indoor pool accommodates 200,000 gallons of spring water.

Ornamental horticulture majors should find the landscaping amusing. Hearst incorporated plants, trees, and vines from near and far to augment the beauty of his house, which is now 50 years old. Not one square inch of Bermuda grass grows in the gardens, therefore lawns never need be moved.

Hearst Castle reflects one man's influence on society. Known as an art collector the world round, he restored many of the world's art treasures—from the depths of the Aegean Sea to the heights of Renaissance cathedrals.
By MELISSA RODRIGUEZ

Author of 10 books in the field of political science, Dr. John P. Carney, a visiting professor at Los Angeles State College in Torrance, has been writing three years writing his most recently released book, "Nation of Change," Dr. Carney's book stresses the vital role of the government as a political system rather than a collection of seemingly isolated and irrelevant facts.

Change is emphasized in the study because the author feels this is the best way to understand American society. The book discusses how America's ethnic minorities have been treated and how they treated each other here and abroad. They would become even more convinced that American society is essentially evil.

Non-blacks studying the same curriculum would likely come to the same conclusion.

"Ethnic Change" is a publication about the American government system, published by Harper and Row. It has been released into a second printing.

Dr. Carney has just completed an anthology of American politics that will be published in 1973 by Harper and Row. He is currently researching a paper on decision making to be presented at the 8th Congress of the International Political Science Association in Montreal, Canada.

He is also doing an in-house editing job for the California Journal, a publication about current California politics.

"I became involved in writing by doing 50 reviews of other books for publishers, said Dr. Carney. "I became ideologically interested in the Mexican experience for our representatives to the committee," he said.

Dr. Carney, a political science professor at Dominguez Hills State College in Torrance, has been teaching college for 22 years and has been a Dr. since 1967. He has taught at Oregon State, USC and Dominguez Hills State College besides at El Camino where he is now a full professor.

Dr. Carney was given a change so he decided to teach here for the summer. He is teaching classes in Law Enforcement Process, California, U.S. and State Government.

He is a dual citizen of Ireland and the U.S. and spent six months in Ireland last year checking on the troubles first hand.

"Right now I am doing more research on the political aspects of control of Mexican migration to the U.S. said Dr. Carney. "My major interest is the Mexican Bruiser."

He likes sports and runs two miles a day. He also enjoys playing ping pong.

Dr. Carney is married and has three children. His family lives in Manhattan Beach and he is driving home every weekend to be with them.

Student faculty evaluations move one step closer to reality Tuesday when the Student Evaluation of Faculty Committee convenes.

Composed of three members each from the student, faculty and administration interests, the committee will be the segmentor of the campus faculty evaluation system.

Primary concern of the committees will be to construct a campus faculty evaluation system through review of this year's pilot program and other similar endeavors.

Student representatives to the committee will be appointed by Art Pres. Rob Baggett. Baggett has announced he will be interviewing prospective candidates members today, Friday, and Monday.

All students concerned with student faculty evaluations were urged by Baggett to apply for a position. "I will be seeking a combination of new blood and experience for our representatives to the committees," he said.
Season ticket sales to start

Season football tickets go on sale Monday on a first come, first serve basis with Bankamerica card holders having an edge on the competition.

All President Robin Baggett has announced that students will be able to use their Bankamerica cards to purchase season tickets for the football season and other major public events during the next year.

Tickets for the home games will cost $7.50 for students and $17.50 for all others. Family members will be eligible for the student rate with the purchase of an All Card.

Purchases will be handled at the College Union information desk, the College Square branch of Bank of America, Sterling West and the Bridge and Bledge shop.

Table tennis tournament set

An intramural table tennis tournament is scheduled to be held in the College Union table room on August 7 through 10 from 7 to 11:30 p.m.

Students are asked to sign up prior to the tournament and the cost is 10 cents for the trophy.

A relatively new concept in teaching lecture courses with related laboratories is under way in the Engineering department. The project will be funded through a National Science Foundation grant. Titled "More Effective Teaching of Technological Subjects," the project is under the joint leadership of John Rapp and Dr. C.R. Russell, both of the School of Engineering and Technology.

"I applied through the college over a year ago for a grant to permit me to spend some time in developing a new approach in teaching engineering technology," says Rapp. In a regular lecture, lab class, the student hears the theory in his lecture and then tries to prove it in the lab. Sometimes the student will wait two or three days before he gets into the lab, lecture no longer being fresh in their minds, and this proves to be a very definite disadvantage to the student," said Rapp.

"What I'm doing is integrating the lecture and lab. Students will get the lectures in bound form which they can read, they will also tee on tape. There will be film strips accompanying each lecture. Students will actually be going into the lab, listen to the lecture, see film strips which demonstrate the lecture and at the same time lecture is going on they will make their own experiments," says Rapp. There is no gap between learning and doing.

This learning process does not take the instructor away from the students. He is still available for individual questions. It is an individually taught course and allows the student to proceed at his own speed. He will not spend any more or less time in the class than he does now.

"I think what we'll find is his time will be spent far more efficiently and he will learn much more than he does under the present system," according to Rapp.

This new concept will be under development and study this summer and next year. The first course to be taught under the new system will be in the fall of 1973.

WANTED: A few swimming girls. Am interested in forming a swim team and swimming pool. We plan to run a vigorous program. The initial meeting will be held at 7:00 p.m. Tuesday, September 4, in the PE room. Interested girls must be able to swim a mile in 15 minutes. Please have your swimming suits with you.

By John Bailey

There is a problem," says Bailey. I like clean air as much as the next guy, nonetheless more nuclear power plants will have to be built to satisfy the growing population needs. People are going to have to start realizing that there is a power shortage, and tomorrow is getting closer."

NOVEMBER 7, 1972

Power needs met

by RUSSELL ALLEN

People do not want a nuclear power plant built near them, but they are not willing to sacrifice modern conveniences.

The average citizen doesn't realize the word "radiation," and it means to him personally. To try to sell a housewife a stop using her oven after a certain time. 'Tell the lady the other show cannot be seen, and you find yourself in a conflict.

Natural Gas is expected to double in cost in the next 10-15 years, and by the year 2000 sooner there will be no more natural gas. Supply and demand will also raise the cost of Atomic Plants.

"There is a problem," says Bailey. Most I like clean air as much as the next guy, nonetheless more nuclear power plants will have to be built to satisfy the growing population needs. People are going to have to start realizing that there is a power shortage, and tomorrow is getting closer."

A relative new concept in teaching lecture courses with related laboratories is under way in the Engineering department. The project will be funded through a National Science Foundation grant. Titled "More Effective Teaching of Technological Subjects," the project is under the joint leadership of John Rapp and Dr. C.R. Russell, both of the School of Engineering and Technology.

"I applied through the college over a year ago for a grant to permit me to spend some time in developing a new approach in teaching engineering technology," says Rapp. In a regular lecture, lab class, the student hears the theory in his lecture and then tries to prove it in the lab.
