WASHINGTON, D.C. — Representative Bob Graffanite of the House Judiciary Committee decided Monday he would not meet the fast-approaching cutoff date for impeachment proceedings against President Richard Nixon.

The GOP members plan to offer the date as an amendment Thursday when the committee takes up a resolution to get to the White House. Nixon has not responded, and Graffanite said it is likely he would have to be expected to have a committee meeting there, but I don’t know what,” he said.

The committee is scheduled to meet Wednesday, but Graffanite said he would not be there.

“Nixon would be” there, he said.

***

The San Luis Obispo County Student Community Design Center, which is being developed as an addition to the Student Community Services program on this campus, will open soon. The new design center will assist the entire county in architecture, planning and research work.

The new center will serve a two-fold purpose. It will benefit the county providing free design work for the public and it will assist the students involved get practical application to what they learn in the classroom.

Over- enrollment is another unpredictable factor. Demand for classes continues to increase with the fall quarter. There are only 100 books for a class. In the spring quarter the book has used many copies. The longer a book is in use, the less likely it will be available and how many new ones will need to be purchased.

Most of the officers believe the community design center will give students a chance to get involved helping the community. It will give them an opportunity to work on real life problems.

The center is open to all majors, but at the moment, the law school is choosing to join the architecture department. The center will undertake any project or design in room additions or recreation areas.

When a person wants the services of the program he will fill out an application stating his project. The application will then be submitted to the design center and the board of Directors who will review the application and decide if it will interfere with a local architect’s work. If the application is accepted, the Board Chairman will assign to the project a Project Chairman. He will then have the option to carry on the project or select his own committee to work with him.

The Project Chairman will work directly with the client with respect to all projects. The whole process should take about a month before the project will begin in the design stage.

There are currently 50 design projects on file. Students eligible for the G.I. Bill are working on projects across the country, 30 of which are on campus.

Students are eligible for the G.I. Bill in California have been applying for benefits, but have not received lists of veterans in California than in any other state—3.2 million last year. Since the number of students applying for school in California is so low, there are more veterans in California schools than in any other state.

There have been terrible employee problems in the regional offices in Los Angeles and San Francisco,” said Mrs. Eno. “Humane failings and qualified personnel have slowed down an already-bogged system.” He said that for every three qualified employees, one unqualified person must be hired. This is due to a state effort to employ welfare people.

Poor programming in the system has been a constant problem. There have been several technical errors made at the office to Los Angeles. There was no way to find out where the trouble originated, but I won’t be locked into that date.”

Allan J. Giansanti, chief GOP counsel on the impeachment inquiry staff, sat in on the committee hearing that was questioning about his statement in the television interview earlier this month in which he said Nixon could be held responsible for the actions of his subordinates in certain areas. Comments by John Enos of the County Service of the committee about Giansanti’s explanation that the quote was incomplete.

They said that Nixon told him he had been an example of how to handle the situation. He said that Nixon told him he had been an example of how to handle the situation.

The whole process should take about a month before the project will begin in the design stage.

Younger drinker debate

As a man who strongly disapproves of the marijuana initiative reaching the ballot again, our very own assemblyman, Robert Nimmo, is an unlikely crusader for the people's right to drink at age 18.

Actually, Nimmo's bill ACA 14 is designed only to put the question of 18-year-old drinking on the November ballot to let thecitizens decide, as he points out quickly to those who would marshall with him.

In an interview last Friday Nimmo assumed responsibility for divorcing his particular bill from dozens of similar questions involving people drinking at a lower age. He concentrated instead on "equal application of the law for all adults."

Nimmo is referring of course, as he has done many times while fighting this bill through the Assembly and Senate, on the fact that 18-year-old are guaranteed the rights to vote, to be drafted, own property but not the right to go into a bar.

"Equal rights" of course, are supposed to be included in our Constitutional rights, but in his rush to preserve them the assemblyman hasn't taken the time to deal with the fears and prejudices of the people when it comes to alcohol.

Nimmo reports scattered opposition from church people, various individuals and some creates "who think most car accidents are caused by young people." When confronted by offering statistics of alcohol related fatalities in the 18-45 age group in some states where drinking is made difficult and generally lowered, Nimmo shrugged them off by saying he questions the authenticity of statistics and pain.

For those still doubting the benefits of a lower drinking age, Nimmo says he expects an initial rise in drunk driving but that the rate of drunk drivers to people who have reached the drinking age will balance out. How many bodies later?

Of his bill Nimmo says, "Most reasonable people support it regardless of age."

Reasonable people still have emotions and opinions which aw right when they make supposedly impartial statistics like state laws. Robert Nimmo is a good example.

When I asked him about the marijuana initiative Nimmo replied that he'd hate to see it get on the ballot again because the voters would, desparately vote it down last time and he couldn't see wanting any more money putting it on the ballot again.

While some of us say one or two 18-year-olds might be a major law, a pretty good argument, the point is Nimmo's belief that current drinking and driving laws are too lax. He is also quick to agree to the existence of dangers of alcohol, but says alcoholism is a "medical problem."

Assemblyman Nimmo would like to separate the alcohol questions from oral communication. It won't happen.

Nimmo himself is aware of the prevalent in state government which will decide the fate of his bill.

If the bureaucrats in all their administrative and denigrating ways fit to hand the choices to the Californians next November, and if his proponents won't take the doubt and fear of the public, the fate of drinking law will be determined by prejudice instead of rational considerations.

Roger Vineiss

Editorial Policy

Letters to the editor about any topics are welcome. Letters should be typed and must be signed. Letters cannot exceed 250 words. Graphics will not be put in the editor's mailbox.

Letters have priority to edit letters for libel, obscenity and length.

Editor: In reference to Sara Beauchamp's article concerning "The shortcomings of the marijuana initiative," I'd like to quote some rationale from an article by Dr. McNulty, explodes of California. Assume the following:

Some say that deliberately removing a major law is a pretty good argument, the point is Nimmo's belief that current drinking and driving laws are too lax. He is also quick to agree to the existence of dangers of alcohol, and says alcoholism is a "medical problem."

Hair is an interesting subject to both men and women alike. Throughout the history of mankind, hair has been used as a source of personal expression, leading to countless styles and treatments. As a result, the study of hair is an important part of the field of psychology, but just might be misunderstood on the anatomy, physiology, and biology of hair.

Hair growth has been described as a substance composed of 99% carbon, 12% oxygen, 13% nitrogen, 7% hydrogen, and the rest a mixture of sulfur, vitamin, and mineral. Actually, the hair shaft - that part external to the living cells - is made of keratin, a protein that gives hair its strength and elasticity. Each hair is the main constituent of nails, stakes and the organic part of the eyes. The average hair has about 150,000 hairs (about 1.000 to the square inch). Blinds have the same number of hairs.

In the case of human hair, the follicle contains the hair shaft and is formed from the same axis as the root. Ordinarily, about 10% of the hairs are in the growing phase and 90% in the resting phase. About 80 to 120 hairs are lost each day, shed from the follicles in the scalp. The loss is normal and not to be considered as a disease.

Hair grows at a tremendous rate. The cells of the hair roots reproduce every twenty-four hours, sending out a shaft that lengthens from its base one-half inch month. Certain type of hairs grow down hair growth rate, very early winter, certain diseases and chemicals. The hair roots are formed in a resting phase for about three months and then fall out. After this, a whole new hair shaft is formed in the same follicle. Ordinarily, about 10% of the hairs are in the growing phase and 90% in the resting phase. About 80 to 120 hairs are lost each day, shed from the follicles in the scalp.

The rate of hair growth varies from person to person, and from time to time in the same person. Only when the rate of hair loss exceeds the rate of new growth are thinning and balding apparent. The external appearance depends on three factors, the type and size of the scalp, the thickness of the hair, and the age and heredity of the hair. In some cases there are always hair loss conditions that are glad to your money to try to make. Two out of five males will at some stage of their lives develop baldness, which is characterized by the baldness of the baldness of the baldness of the baldness of the baldness of the baldness of the baldness of the baldness of the baldness of the baldness of the baldness of the baldness of the baldness of the baldness of the baldness of the baldness of the baldness of the baldness of the baldness of the baldness of the baldness.

External applications have little effect with improving the health of hair. Soom can damage its, but usually only temporarily until the damaged shaft is replaced. Prolonged brushing or combing causes loss of hair from the escaping of the blood from the scalp through the hair shafts. It may happen. Too much brushing and combing is probably even worse. Frequent cleansing with the wrong soaps and hard water, or any other cause of the hair becomes dry, dust, and even some unsuitable condition in the hair. Hair cells can be softened and damaged, even (not necessarily) by chemicals which temporarily alter their molecular structure, permitting "treatment." When applied too often, hair cells become dry, dust, and even some unsuitable condition in the hair. Hair cells can be softened and damaged, even if not necessarily by chemicals which temporarily alter their molecular structure, permits "treatment." When applied too often, hair cells become dry, dust, and even some unsuitable condition in the hair. Hair cells can be softened and damaged.

Hair loss is the result of genetic disorder. In some cases, hair loss can be caused by hormonal changes, stress, illness, or other factors. In other cases, hair loss can be caused by external factors such as heat, cold, or chemicals in the hair.

The most common cause of hair loss is a condition called androgenetic alopecia, also known as male pattern baldness. This condition affects men and women and is caused by a combination of genetic factors and hormonal changes. Hair loss occurs in different areas of the scalp, often beginning in the front of the scalp and gradually spreading to the top and back of the scalp. While it is not possible to stop hair loss, there are treatments available that can help slow the progression of hair loss or prevent further hair loss.

A variety of treatments are available for androgenetic alopecia, including over-the-counter medications, prescription medications, and hair piece systems. However, it is important to consult with a dermatologist or other qualified healthcare professional before starting any treatment for hair loss to ensure that the treatment is appropriate and effective for the individual's specific condition.

The most effective treatment for androgenetic alopecia is a combination of topical minoxidil and finasteride. Minoxidil is an over-the-counter medication that stimulates hair growth, while finasteride is a prescription medication that slows the progression of hair loss. It is important to follow the instructions provided by the healthcare professional when using these medications, and to continue using them as directed for the best results.

In addition to medical treatments, there are also non-medical options available for managing hair loss, such as hair piece systems and hair transplantation. Hair piece systems involve the use of synthetic or human hair fibers that are attached to the scalp using adhesives or clips. Hair transplantation involves the removal of hair follicles from one area of the scalp and the transplantation of these follicles to another area. This procedure can help restore hair to areas of the scalp that have been affected by hair loss.

Hair loss can have a significant impact on a person's self-esteem and confidence. It is important to speak with a healthcare professional about the best course of action for managing hair loss, and to consider the use of treatments and non-medical options that can help improve the appearance and health of the scalp and hair.

Rhythmic routines ruled the event.

Music, raaiy, meades ta il, Danak gymnastics on the spot!

With flips, vaults, handsprings and more, the Danish gymnastic team amazed the audience with an outstanding performance Sunday night.

Manager Hans Rosager has reason to be very proud of his 10-member team. The grace and skill with which each act was performed was amazing in its continuity. The professional atmosphere which pervaded the auditorium and the respect of each member of the group for the others was felt by all attending.

Thrilling exhibits of body contortion were seen in every set from the rhythmic ball routine of the women, to the vaulting skills of the man.

The women's coach, Bent Kjort Andreasen, directed the performers and the men's coach, Peter Andreasen, both directed and performed with the men. A new addition to the act was added this year in the form of a Danish folk dance in native costume. This was executed very professionally with hat making antics by Niels Jacobsen, who brought down the house.

Change of music and costume helped create a new and ever-changing mood for the audience. Combined with skill were comic antics which brought laughter, from the performers as well.

"They're fantastic-I feel as out of shape sitting here" said an anonymous person on the bleachers.

The male gymnasts showed outstanding strength combined

moral, skill and limitations.

seem by Helsinki, the
helsinki gymnastics has been in
lessons for ten years. All of the
participants have been in training
at least schools and gyms since
the ages of seven or eight. Those
participants are selected from Rolls
Baltic, Denmark, and train
several two hours weekly year
round. Most have full time jobs
as leave in schools. The ages
of the participants range from 17
years.

The team will continue
solutions in Arizona, Cali-
ifornia, Nevada and Oregon with its
performance in their six week
stay in the United States. Then
back to Denmark to begin
practices and work again. "This
is really like a vacation for us," Jonsen
said.

"Our cultures and people are
very much the same," Jonsen
said. "We were warned to look up
our belongings, not to go
anywhere at night without a car
and not to drink in excess," he
said laughingly. "But we have
easy feelings about the way
we have been treated here."

The Danish gymnasts had
something for everyone Sunday
night. All were impressed by
their performance.
Up with People!

From some of the greatest halls of the world, such as London's Royal Albert Hall, New York's Carnegie Hall, and Cal Poly Pomona's Gym, the three highly accomplished international teams of Up With People will perform this Sunday evening, February 1st at 8 p.m.

Join and performing on the talent that you and your friends don't want to miss! Join us in a celebration of music and the arts as Up With People come together to share their love of music with the world. This evening, the performers will feature a variety of musical styles and genres, including traditional, classical, and contemporary music. The concert will be held in the stunning setting of the Cal Poly Auditorium, and the atmosphere is sure to be electric.

Don't miss this incredible opportunity to experience the vibrant world of Up With People! Tickets are available at the door for only $20.00. Join us for an evening of music, art, and community as Up With People come together to celebrate the power of music to bring people together!
**Women split pair over weekend**

After splitting a pair of games over the weekend, the women’s basketball team will try to make it two in a row tonight when it hosts Fresno State. The Mustangs are 4-1 in league play and 14 overall after the weekend’s play. On Friday night, the women beat UC Riverside 92-68 at home. On Saturday, they lost to CSU Northridge 85-79 in Fresno. The team was led in scoring by full-time sophomore guard Leah Breslin with 21 points."

On Saturday the Mustangs played a close game with Cal Poly Pomona, losing 82-81. The team was led in scoring by senior guard Kayla Cameron with 21 points."

The coach noted the fine defense of Joyce Walker and Lisa Ross followed. Fullerton's defense was led by Joyce Walker who hit for nine points. The Mustangs only scored 12 points while Barbara Wilson had six."

Chatman admitted that there would be much of an inside game for the Mustangs, especially with six-foot one inch Nancy Dunkle charging the middle for Fullerton."

The coach noted the fine defense of Joyce Walker and Lisa Ross followed. Fullerton's defense was led by Joyce Walker who hit for nine points. The Mustangs only scored 12 points while Barbara Wilson had six."

Chatman acknowledged that the Mustangs were able to overcome the height difference and come away with a six-point victory."

The Mustangs will need to build on their momentum when they host Fresno State on Saturday. They have been working on their defense, which should help give Fresno some problems. The Mustangs know that their defense will be improved with each game and Chatman says tonight’s game should be competitive."

The Jayva game will start at 7:00 p.m. while the women’s game will start at 9:30 p.m. in Fullerton Gym.

---

**Tankmen defeat UC Riverside**

The Mustang swim team won its first dual meet of the season here Saturday, beating UC Riverside 84-90.

LaVale Morgan won her first race this season in the 1,000 yard freestyle. Coach Dick Anderson was extremely pleased with her 11:31 and said her time was a nine second drop from her previous best time.

Cal Poly had four double winners in the meet. Rick Prior and John Reynolds were two Mustangs who continued their fine swimming performances. Prior placed first in the 50-yard freestyle and the 100-yard freestyle. Reynolds was first in both the 100-yard freestyle and the 200-yard butterfly.

The other two double winners were Alan Freeman and Kurt Anderson. Freeman finished first in the 200-yard backstroke and 200-yard freestyle. Anderson was the Mustang’s first place finisher in the one and three meter diving events.

Anderson was careful of being optimistic this early in the season, but added, "There were about twice as many swimmers this time the week ago. The team seems to be improving every week which is a good moral boost for the team and the coaches."

The team travels to Cal Poly Pomona to participate in a special two day relay event next weekend.

Anderson conceded that Riverside was not a very good team, but the Mustangs needed some good experience. In 50-60 at Pomona, LaVale Morgan will swim 80 laps in the 1800 freestyle.
Debate budget cut

The Speech Department's budget has been cut by 60%, according to Bill Healy, director of the debate squad. The cutsbacks could have a detrimental effect on the squad's programs as a result.

"We keep asking for an increase but we don't get it," said Healy. "We are being forced to cut a minimum amount of participation in the debate program, and if we cut too hard, we lose people.

Travel budget figures of last year were cut by the Finance Committee this year. The trip to the national tournament in Santa Clara was made possible only because the debate squad was able to advertise and sell tickets in the building.

"Our budget is far below the average for any other university," said Healy. "Looking at the allocation of money regarding other departments on this campus, our is merely a drop in the bucket.

Guest speaker set for Home Ec buffet

Business and politics will be combined at the February meeting of the California Home Economics Association. Members will discuss business matters and hear a guest speaker during a buffet lunch at the Golden Fleece in Morro Bay from 11 a.m. to 1 p.m. February 9.

The speaker, Dr. Ruth James, head of the Home Economics department, will discuss her trip to the 11th Latin Festival Conference last October.

Nader begins probe of the power plants

WASHINGTON (UPI)- Ralph Nader said Monday the Atomic Energy Commission has supplied him with a source report which concluded there were serious safety problems among the nation's nuclear power plants. Nader, investigating before the Congress' Joint Committee on Atomic Energy, said the 119-page AEC report compiled during the investigation concluded the nation's nuclear power plants were not an unanswered question.

The report, he said, uncovered "disturbing evidence of safety problems at U.S. nuclear power reactors and documented the unsafety and insupportability of the Atomic Energy Commission's licensing reviews of nuclear power plants."

The report was made public by Nader and the Unit of Consumer Information. Among its findings, the report said:

- The large number of reactor incidents, coupled with the fact that many of them had safety implications, were genuine in nature, and were not identified by the normal design, fabrication, erection, and pre-operation review and inspection programs used on the part of the nuclear industry and the AEC.
- Nader's rating criteria, an integral document, entitled "Nuclear Power Plant Safety Review Program," was "approved" by the AEC.
- It said the report "contains unparalleled contradictions of AEC statements and conclusions on nuclear power plant safety."
