Moretti opposes tuition, Alioto and Republicans

by ROGER VINCENT

...continued from page 1...

from the oil industry if the oil prices were high as he says.

In an interview Thursday with college newspaper reporters, Moretti criticized San Francisco Mayor Joseph Alioto's handling of black protests in the city's streets. "I'm not a lawyer, but I believe it may be unconstitutional. At any rate it wasn't consistent with what I did before during the Sodile protests. While men were not being grabbed off the streets. We avoided the problems that would cause impatience in more people," Moretti responded. "That is ridiculous.

WIND GENERATOR—Though it looks a bit like Snoopy's Wattlet with Columbi this monster is actually an alternative source of electricity. It needs at least a seven mile per hour wind to make it work.

Alternate energy source designed

by LARRY EDWARDS

Each home should boast its own wind-powered generator, or solar cell enthusiasts. Even self-produced supply of electricity each home should provide itself with the energy it consumes.

That's how Bill Davis thinks it should be. That's why he and five other Cal Poly students are developing their senior project efforts to the study of practical alternative sources of energy.

Jerry Craig, Adam Chovan, Wayne Patrice, Lee Credle, John Cornella, and David, all five-year architecture students, are designing and building prototypes of energy systems that can be utilized for architectural purposes.

One of these prototypes is a 10-foot wind generator, a device that uses the force of the wind to produce an electrical current. It sits on a few yards north of Premont Hall, an architectural lab.

The unit was designed to deliver a maximum of 10 volts at 180 amperes with the alternator charging two 14-ampere batteries in series. This would be about enough to light a 100-watt bulb temporarily, Davis said.

However, the blade design was far more efficient than originally expected. It turned out that the lighting equipment proved inadequate. Not only could the blades turn faster than enough to run much larger electrical units, but a bicycle chain component was thrown off its assembly.

"We didn't have enough money for large capacity units," said Davis. With larger components, he said, a generator of similar physical dimensions could provide a home with light and power.

Cut in men's athletics proposed

by JOE SANCHEZ

A bill initiative that would result in a 15 percent cut in the financing of men's athletics was recently presented Wednesday night to the Student Affairs Council.

Sponsored by Jack Spencer, a representative from business and social sciences, the initiative would place a $6 per student limit on the amount of money that can be allocated to men's athletics. It also breaks down the way the $6 should be spent: $4 for men's athletics, $10 cents for women's athletics and $1 10 cents that would be spent in an emergency athletic contingency fund.

The initiative, if it qualifies for a student election by having a signature totaling a percent of the student body within 60 days, must be voted on by the students within 90 days.

According to Spencer, the initiative garnered 150 student signatures, far in excess of the 111 signatures required for an election.

The initiative was referred to Elections Committee Chairman Nick Faht to verify its authenticity. Faht termed the initiative "a basic philosophical issue." Spencer said the purpose of his proposal was to determine "where we are going.

Athletes currently are allocated a great deal of the student's money, he said. Men's athletics alone receive $1 per cent of the 832 All

The initiative would result in a $1000 increase to Women's Athletics.

Reaction to sponsor's proposal was harsh and swift.

Dr. Victor Bussone, athletic director, termed the initiative "very unrealistic." He added that with costs in general increasing it wouldn't make sense to cut back on programs that are struggling now to keep their heads above water.

Russ Faber, representative from architecture and environmental design and A-I-Pres. elect, called the proposal "ill advised at this time and premature.

Greg Fowler, representative from communicative arts and humanities and chief justice-elect, questioned the merits of the initiative on both philosophical and realistic grounds.

On the realistic side, Fowler called the idea of cutting athletic funds in the "heat of the moment" and added that if the initiative were passed it would result in a "monstrosity."
MORE HELP NEEDED

Volunteers: learn by doing

Getting in Touch with Social Development Skills—this is what the patients at Atascadero State Hospital are trying to do, and they've retained their own volunteer club so that title now prevails over the old SCM, a shortening of the rather long name, exists for patients under 25 years of age who soon will be released from the State Hospital, and desires upon volunteers from the community, especially Cal Poly, for support. Once a week, the members of the club get together for recreation or just interaction. The membership consists of about 10 young state patients, five Cal Poly volunteers, and three or four volunteers from the community.

"The patients are so glad that someone would take time out to care about more things," said Carol Frost, who has been a member of the volunteer club for four years. "They love to talk to the volunteers, and would give anything to see us more often. It's such a change of routine for them when we make our weekly appearances. They really love it."

While the patients are working on developing social skills such as simple conversation and communication, they are having the time of their lives playing volleyball, cards, and table games with the volunteers. Struggling to come out of their shells, they visit with both male and female volunteers in the occupational therapy room while working on leathercraft or jewelry.

"If we're not playing a game, we just mingle around and talk to them," said Miss Frost. "There's really not much restriction on recreational material. We just talk about anything and everything. The most important thing is that we be frank and open with the patients. They're headed back into society, and we're there to prepare them for that."

 Still is in dire need of more volunteers. Miss Frost said that she would like to see volunteers and patients meet on a one-to-one basis.

"We get together every Monday from 7:15 p.m. to 8:45 p.m. at the Hospital," she urged. "Volunteers can get information from the IU Information Desk at 4:15 p.m., and returning around 9:30 p.m."

IU will host a social evening with music and refreshments on Monday, May 30 from 7 p.m. to 9 p.m. at the Atascadero State Hospital for club members and those interested in volunteering.

The social evening should create a friendly attitude about the hospital, instead of the stigmatic atmosphere that most people associate with hospitals."

For further information, call Carol Frost at 568-9974, Mary Taylor at 587-8727, or Student Community Services at 568-3676.

John Wayne
Joins cowboys in Spurs club

Movie superstar John Wayne was named an honorary member of Bionts and Spurs during its annual awards banquet at McChlein's in Paso Robles on Friday evening, May 11.

In conferring the honor, the club cited Wayne's projection of the image of the Westerner, his patriotism and his role as a rancher in Arizona. Accepting by letter, Wayne expressed his thanks and regrets at not being able to attend.

According to Pres. Kevin Seaberry, awards were bestowed on outstanding Seniors for exceptional work in the animal sciences field. In addition, belt buckles were presented to members of the livestock judging team in recognition of their efforts the past year.

Speaking to the group on "The Evolution of the Horse," was Bivouac. Although, California Livestock Extension Specialist from U.C. Davis.

Men's Gym being used inefficiently

Considering the initial expense of the gym, it seems only logical to spend what little extra it costs to keep the gym open more of the time to be used by students. For whom is it built? For whom is it full? It seems most students would like to use the gym during the hours when classes are not in session, or it is not being used for athletics. However, they are unable to use the gym because it is locked or equipment is not available.

There is a growing interest in volleyball on this campus but there are few places to play it, due to the lack of outdoor volleyball courts. The gym could be put to further use by allowing students to come in, set up nets and enjoy playing volleyball without having to leave college. Scheduled times could be arranged when there is no other activity in the gym.

Editor: M. George Gillard

Suggestions for class gift needed now

Senior class gift suggestions are being accepted by the Senior Week Activities Committee in lieu of the University Union.

Gift ideas may come from any interested student, and all suggestions will be considered. The gift may be any size, traditional or modern, and may include donations to campus activities or programs. Any part of campus which might be improved would also be an acceptable suggestion.

The goal of NWAC is to provide a lasting gift from the class of 1974 which will enhance and benefit the University.

A child’s world—
the innocence
of learning

“Hey, I can go faster than you can!” “Beatle you can’t!” “Oh, yeah! I’ll race you and prove it!” And they’re off—Mother and son pedaling their tricycles furiously to see who is the speediest. Actually both parent and child win when both are involved in the Head Start program.

Names like the one described above are common during a daily Head Start session. Parents play a very important role in the program and are involved in every aspect of it.

Teacher for the Head Start program here, Mary Taylor, said, “By involving the parents we hope to create an interest in their children’s education that will continue throughout the period they are enrolled in the public school system.”

The Parent Policy Council approves budget appropriations, interviews prospective employees and helps with fund raising. Each parent has a weekly conference meeting with Mrs. Taylor, and is asked to volunteer some of his time.

“Parent involvement is not a requirement,” said Mrs. Taylor. “It is a necessity.”

Head Start is a kindergarten preparation program for three- and four-year-olds from low-income families. There are no down learning lessons, but just a continuous learning environment.
Aaron Hemendei’s way of expressing the end of the day.

If they want to talk... Students help desperate youths

It’s a sunny afternoon and you’re all alone. You’d like to shout a few words, but no one is around. You don’t have a magazine or a book to read, and there’s nobody around to show you how to handcraft something or just talk to you. The feeling is empty feeling to be alone.

There’s nothing hypothetical about this situation. It’s happening right here in San Luis Obispo under our noses. It’s all because nobody seems to care, or take the time to, or even realize that there is a need for his existence.

Sunny Acres, the San Luis Obispo County Detention Home, is one place where a good number of youths would fit idle and alone— it wasn’t for Cal Poly Youth-Recration and Enrichment, a program initiated by Student Community Services. Here:

“Our volunteers spend a couple of hours a week out there,” said Greg Menges, movement director of the program. “We teach them arts and crafts, play some tennis, shoot baskets or toss a baseball around and just give them a chance to breathe.”

The young men and women, ages 16 to 21, said that Sunny Acres are not to be confused with criminals, said Menges.

“Sunny Acres isn’t a correctional facility,” he said. “It’s a place where teenagers are detained, perusing the possibility of return back to the community, or until problems in their own home can be worked out. They’re basically good kids, and they’re really very easy to work with.

There are presently only four volunteers giving their time at Sunny Acres, but Menges hopes to raise the number of Cal Poly volunteers to 20 by the end of the year.

“We can always use more volunteers,” he said, “such guys and girls. The kids at Sunny Acres really respond to us because they know we’re not part of the establishment. They have troubles relating to their own colors, but we don’t make them talk if they don’t want to. If they don’t want to talk, we’ll listen, but if they do, we just forget there’s anything wrong. We’re here to help them relax and get the troubles out of their minds. It’s tough for them at first, but they said they felt the situation out. The new kids really don’t know what to expect from us, but we’ve generally received pretty well.”

Menges said that Sunny Acres is a need in need of old books, magazines and games. Students wanting to donate any of these items may drop them off at Student Community Services Center, room 117 of the University Union.

Other programs initiated by Student Community Services which are currently in operation include PALA, a big brother-little brother program, Peer Community Recreation, group interaction of youth and their peers.

For more information on the Sunny Acres Project, contact PAM, Community Recreation, or if you’re interested in participating in one of these programs, contact Bob Benda at 562-2747 or Greg Menges at 562-2747. Both Benda and Menges have offices in the University Union.

“Sunny Acres is located behind General Hospital in San Luis Obispo, and it really isn’t too far away,” said Menges. “These kids don’t have anything... except you.”

“Viable alternatives are never new,” there said, and think this is one of them.”

Wind generation is only part of their project though, as the six men are designing a “total system,” which would include electricity for homes. Solar heating and organic gasification are integral parts of their project.

“People are becoming beast in their appreciation of energy,” said David. “Lately, we’ve had a lot of interest, and it’s a point that we have to come into people’s lives.”

Movie editor will critique Western films

Film editor for City magazine Mike Gowan of San Luis Obispo will comment on western films this Wednesday, May 18, at 7:30 p.m. in Chumash Auditorium.

Sponsored by the School of Communication Arts and Humanities, the festival, entitled “The American Film Industry Yesterday and Today,” guest student film critic Mike Gowan will continue through Saturday, May 21.

Classes help others...

The courses are designed to explore and develop career-oriented personal interests and skills and are particularly designed for questions, professionals, educators, psychologists, students, and helping professions.

According to Edwards, talk-back sessions will be used to provide participants with the opportunity to utilize the expertise of the entire group.

The course will be held in the Mental Health Center, and run from May 22 to June 12 at Cal Poly Extension courses are open to any age.

Alternates energy forms sought...

A seven mile per hour wind is required to turn the blades 180 degrees, and at 10 to 15 m.p.h., the unit can generate electricity. The three blades are five feet long from the outer edge, and are made of a light, sturdy “hockey” material.

Eight months of research and designing and two weeks of actual construction went into the small project. Robert Brown, general manager of Parkland, suggested that wind generation be used in addition to solar power.

The students feel the wind generator is “a viable alternative.”

SAC proposes legislation...

(continued from page 1)

Philosophically, Fowler said he doubted that the general student was informed enough to vote on how to spend his own money.

Totally overshadowing the first formal budget hearing, the initiative raised many questions about the minds of the SAC representative. The most important of these was the date of the special election.

According to Nick Patlin, elections committee chairman, it would be impossible to include the initiative on the special election ballot for amendments to ASR Bylaws to be held next Thursday, unless the special election for the initiative is held in the next three weeks of Spring Quarter, it would have to be held during Summer Quarter, a possibility that many SAC representative were to avoid. But, despite the general disapproval for the initiative, if it is approved, the initiative would be on the special election ballot.

In other matter, SAC, as expected, moved the 1976-77 budget from a discussion item to a business item Wednesday night. A total of $900 was added to the budget from various amend­ments. They included:

$111 subsidy to Rolls-Twining surname of $5.00 to Dairy Products Judging
$600 increase to Contingency Fund
$750 subsidy to Golf Team
$700 subsidy to Women’s Glee Club
$100 increase to Women’s Recreation Association and Interfraternity at 1080 and 850, respectively, were post­poned until next week.

Hendricks elected AIP President

The newly-elected president of the California chapter of the American Institute of Planners is a faculty member here who teaches city and regional planning courses.

Francis Hendricks joined the staff of the School of Architecture and Environmental Design in 1968 and has resided in San Luis Obispo since that time. He played prominent roles in the securing of national AIP recognition for the campus planning program and also in the preparation of a proposal for the master’s degree program in City and Regional Planning. If it is approved, it would become the seventh degree program to be offered by the School of Architecture and Environmental Design

Hendricks taught at the University of Pittsburgh and Brandeis University following his master’s degree program in City and Regional Planning. In 1968, he obtained the master’s degree and has worked for a number of years as a planner in private practice.

In several papers Hendricks has proposed possible applications of simulation and computer design which have contributed to the planning process.

Professional planners throughout the state have sought Hendricks for support of the “systems” approach to city and regional planning.

Hendricks was elected and installed during the week of May 1 to 4 during the state conference of the organization of city and regional planners in Newport Beach.
Larry Bridges: jogger, coach
health nut and nervous wreck!

Larry Bridges likes to run. But he sure doesn’t approve of the way the state school system is, in effect, running him out of San Luis.

Bridges is a 32-year-old education major who wants to become a health education teacher. He’s the guy who nudges freshmen enrolled in his course into counting calories and wearing sporadic clothes for sweats as they dive headfirst into a jogging program.

The red-haired Bridges just about scares the daylights out of everyone in his class in the slightest bit overweight. From his feature it could be gathered that heart attacks will come to nearly everybody except him. But he ran home for Christmas vacation.

Although he is slim and trim himself and his legs deny his midgesness, Bridges feels that he has become a nervous wreck. He tells his classes that their friendly health ed. teacher is a mere prospect for a straight jacket.

What worries Bridges is his job stability. Liked by most of his students for his easy-going classroom style and ten-year-veteran of the health ed. teaching wars, Bridges still has to worry every single year whether he will be asked to continue as a Cal Poly professor and cross country coach.

"Teachers that don’t have homogeneous, can’t get promoted," Bridges said.

"In next year, in order to secure a doctorate degree, Bridges might be in New Mexico, completing his final year of study. Bridges thinks this is absurd. Not working for a year isn’t a healthy financial situation for a family, but after his own fears of mind. Bridges evade wants to run the doctorate sheepskin in his hot little hand. But what really bugs Bridges, in the price he has paid for the piece of paper which he believes won’t mean a better of a health ed. teacher.

"In my life, I’ve run 2:30 miles, but after the degree, it’s still not any fun; there’s just too much pressure."

Bridges indirectly blames a distorted view of athletics for causing him all this trouble.

"I don’t like what’s happened to athletics," Bridges said. "It’s no longer any fun: there’s just too much pressure."

"No one is a coach who gets tenured can stay on forever," he said, "but a coach who has a bad year just doesn’t come back."

"That’s one of the things that our government is compounding the problem by shutting down a priority budget system for athletics.

"He says the money should be judicious on what they offer students, not for their amount of national championships they’ve won, or how much they bring in, or national recognition they gain for the school."

"Cross Country gets $1,000 out of the $15,000 pocketbook to allow 15-20 students to run cross-country this fall. Bridges says the uninitiated cross-country faithful of about 40 people watch his long laggards do their thing every meet."

"If he feels, at least justify the money his group gets, a patina compared to the armored-ceradade of dough that big schools like UCLA and USC dole out to their runners."

Bridges said that UCLA has 40 treasures on full ride, while UCCG quips that they ONLY have 19. One-third of just one of those scholarships would fund his entire cross-country program for an entire year. No small wonder that Bridges thinks our student representatives are maybe as not looking at the bigger picture when they threaten to drop cross-country.

But athletic funds aren’t Bridges major concern in life. He just wants to hold a secure teaching job here at Cal Poly. He said that he would still coach cross-country even if he got his doctorate just for the "fun of it."

The high thrill for Bridges is being an instructor looking out a class and seeing that they are awake and interested, he said.

As a health education major says, "I love to teach. There is nothing else I would ever want to do."

"It’s a real shame that he has to waste a year just to get a piece of paper that doesn’t mean diddly to him."

Old gridders to meet young
in Alumni game

Youth will have its flag, for the Cal Poly football team that is.

The Mustang lineup will be filled with underclassmen for the fifth annual Alumni game, Saturday at 7 p.m. in Mustang Stadium.

Only four or five seniors are expected to be in the starting lineup for the Mustangs as they wrap up their spring training for the fall season.

The game should give coach Joe Harper a better look into his younger gridders for prospective for the 1984 season.

Harper’s spring training program has been geared to developing his younger gridders and Torch pilots ahead of the fall practices.

"We are looking forward to tailoring our spring practice with a game against an actual Alumni team. That will be a good test for our young, inexperienced players and will assist them in their development," Harper said.

The Alumni figure to be tough if they’re in good enough shape to handle the younger Mustangs. 10 former all-conference players will be on hand in next Harper’s crew.

The list of returnees includes Mike Holcomb, George Hurley, Steve Graybok, and Jim Turner in the offensive line. The running back corps will be led by Gary Albin and Steve Brandenburg.

Six former all-conference defenders will be out to put a halt to the offense. Mark Bedtel will be back at defensive tackle, with Dan Johansen and Glenn Gobner returning to their linebacking positions. Gary Plassman has been named to the Mustang offense for next fall.

Mustang seniors expected to start are swing safety Kirk Hubbard, linebacker Jeff Van Dyke, defensive end Mike Foley and Glenn Gobner returning to their linebacker positions. Gary Plassman has been named to the Mustang offense for next fall.

The varsity had a tune-up scrimmage for the game last Saturday. If the scrimmage was any indication, CCAA running backs had better batten their running talents into a cross-country program for next fall rather than football.

"But what really bugs Bridges," the coach Mid.

As the coach solemnly say, "I would like to be a minority in this culture as we have to get people in government who do believe that whatever we can hope for equal treatment."

Auto racing tour lures Poly group

An unusual collection of Cal Poly students and alumni are getting their names into the professional auto racing industry, and they’re doing quite well.

With a graduate from the Business Administration school here at the wheel, a 1980 Trans Am Javelin rolled to a 1st place finish in the first race of the West Coast International Motor Sports Association series at Laguna Seca. There were 44 cars in the field at Laguna Seca and over one hundred men were simulated in qualification rounds.

What makes the team unique is that from the greased monkey to the driver the car is pampered, tuned and threatened by people who are, or at one time were associated with Cal Poly.

Five of them were mechanics majors.

John Bauer, 24, mans the wheel of the car. Keeping Bauer’s tank full and windshield clean is his five-man pit crew.

Included in the odd assemblage of greased monkeys and tire changers are a Cal Poly social science major, and architecture and industrial technology graduate and two seniors, one a chemical engineering major and one an engineering technology major.

Jim Thane, chief mechanic and former architecture major and Dave Devold, who holds a degree from this university in industrial technology serve a double duty on the racing team.

Thane is the owner of German Auto while Devold is the owner of California Crankshaft. They serve as sponsors for the car while working in the pit.

Sponsoring the racer most Thane and Devold about 600 to 700 miles a month, according to Thane.

Bauer, the team’s p.r. man. The car’s other sponsors are Turco Oil, Speedtunger Igniters, Union Oil and Champion Sport Plugs.

This speedy racer was originally prepared by Ken Kaplan and driven by George Pelzer in the 1980 Trans Am Series.

Bauer’s accelerator foot has its call the equal of any horseman. The engine, 986 cubic inches in size, and is a small block NestCarypey Mateador motor. The Laguna Seca performance shows that all this technical striving adds up to just one thing—speed.

Bachus said that the car was run even better than the 100-mph placing at Laguna Seca last weekend.

The car was apparently plagued by engine trouble.

This weekend the car will race at Ontario and hopefully will be entered in the 1981 races sponsored by Camel Filter.

If the car comes through, the racing team will move on to Ontario because there is no question to Bauer’s driving ability.

Besides a number of regional wins last year, Bauer finished third in national points for the California region of the racing circuit last year.

He started racing at age 15 in a Volkswagen and from there went into drag racing. He bought his first Javelin race car while a student at Cal Poly and had sold his street car to do it.

He’s now on his second Javelin and for the first time racing in a professional circuit.

Marking his progress is his timing and scoring team which, of course, is comprised of members who are associated with Cal Poly.

Bauer’s wife Ellen works as a secretary in the Agricultural Business Management. Two social science co-eds, Karen Thane and Andy Anderson also run the scorekeeper. Thane has graduated and is now shooting at a teaching credential.

Filling out the time crew is body builder a senior animal science major.

Poly to rope for region title

Crowning in with the West Coast Region title: all wrapped up, the defending national champion Cal Poly racing team will work up to regular season this weekend.

The Mustangs will travel to Pierce College for the West Coast Bank, and the final winding prior to the National Intercollegiate Track Events in Honolulu, which will be held in

The men’s team has already got the conference title in the bag for this year, after shaking off an early challenge from Fresno State. The women’s team will need an outstanding team effort to beat Fresno and earn the trip to Honolulu with the men.

The women’s team consists of Caloma Sanchez, her sister Leigh, and Linda Gill.
