Grand Marshall

First woman graduate returns

by CLAUDIA BUCK

In today's terms, Elizabeth Hanlon would definitely qualify as a women's rights crusader. Yet no such thought was further from her mind when, in 1956, she became the first female to receive an undergraduate degree from Cal Poly, until then an all-male institution.

Tomorrow the young grandmother will return to her alma mater to preside at the 1974 Homecoming Grand Marshall during the parade and football halftime ceremonies.

"I'm as proud to be coming back to Poly as on the first day," Mrs. Hanlon says, adding that the school's character hasn't changed "since the day I married." That was back in the spring of 1956, when she was allowed to enroll to complete work on a teaching credential. Prior to her move to San Luis Obispo in 1941, she taught elementary school in Washington, with a life certificate for teaching. In order to teach in California, it was necessary to complete a bachelor's degree in education.

As a 46-year-old married coed, Mrs. Hanlon found attending Poly a challenge. "It was the toughest competition I have ever had, competing with those boys. But I wasn't about to let them outscore me," she said.

City Council to consider zoning permit

by CONNIE PITTs

An amendment to the zoning ordinance which prohibits transient dining in a residential zone will be proposed on Monday at a public hearing of the San Luis Obispo City Council meeting.

The amendment would allow off-campus housing dining facilities to sell meals to non-residents on two conditions: 1) occasional guests of the residence; 2) in conformance with a use permit granted by the city.

Bob Strong, city planning director, said guidelines for the use permit "are not included in the ordinance, but will be con sidered in the amendment. Some of the guidelines would be limiting meals to non-profit organizations, no advertising of the meals, and compatibility to the neighborhood." (continued on page 10)

Poly's doughnut lady retires after 13 years

by JANET MCBRINE

"I don't really care for them," admitted Elsie Malleo, known on campus as the "doughnut lady." Elsie was speaking of doughnuts and the occasion was her last day of work before retiring.

"I used to love the things," she qualified. "But after 13 years of making them, I just can't enjoy eating them. I guess that's a good thing—at least it didn't do my figure any harm." For the past three years Elsie has run the annex doughnut shop. She has made all the doughnuts served on campus for the past 13 years, but it wasn't until she moved into the annex that she gained campus recognition.

While working here she made a 115 dozen doughnuts every day. It took two pounds of icing to top all the little doughnuts. Elsie's working day began at 7:30 and didn't end until 5 p.m. The annex is open from 6 a.m. to 11 a.m.

"I made all my doughnuts as I told them," she said. "There's no way they could have been fresher. For Halloween Elsie created specially decorated "spooky" doughnuts a custom she followed on all special holidays. "A lot of people think I'm nuts, but I just enjoy cooking," Elsie explained. While working on campus Elsie was able to combine two of her favorite things—cooking and fashion.

"I've made a lot of friends," she said. "Some of them are just like me."

But it is another favorite thing that has induced Elsie to leave. Three years ago she and her husband first visited Brazil and she has been longing to go back since.

The second reason was her own. "I'm going to enjoy the things I can't enjoy now," she said.

Fifties theme runs throughout activities

Reviving the traditional downtown parade, Homecoming activities continued into the evening with a special event. At 11 a.m. the parade begins in procession down Higuera Street.

The 80-vehicle caravan includes floats, Shriner automobiles and novelty entries sponsored by various campus clubs and organizations in keeping with the Homecoming theme—"Poly Graffiti! The Years of Rock and Roll."

In addition, the Cal Poly band and four high school marching bands from Los Osos, Arroyo Grande, Cabrillo and Hammon have accepted invitations to participate in the parade.

Distinguished guests and Grand Marshall Elizabeth Hanlon, first woman graduate of Cal Poly, will lead the parade in authentic fifties cars, donated especially for the occasion. The guests will make their way down Higuera past a reviewing stand manned by President Robert E. Kennedy and the band judges who will survey the caravan.

Proceeding the parade, "Flash Cadillac and the Continental Kids" plus special guest star "Wolfman Jack" will appear in concert tonight at 8 p.m. in the Men's Gym. Tickets are still available from the University Union box office and at downtown locations. Prices are $4.30.

EOP granted frozen funds from SAC

A unanimous voice-vote ended a week of controversy Wednesday evening when the Student Affairs Council approved the unfreezing of funds of the Economic Opportunity Program.

By executive order, All-Poly Planning Committee, in November of the current school year unfroze more than $16,000. He had put into abeyance in 1968. It was moved to vote on the proposal at that time.

Last Wednesday the campus staff surprised Elsie with a party. "They didn't serve doughnuts," laughed Elsie. "But the cake was decorated with them."

Women sex role: 'Witches, bitches'

Since colonial times, man has been trying to explain women's behavior. This is the view held by Dr. Timothy Barnes who spoke on "Witches and Bitches: Puritan Attitudes Toward Women," said that this period was crucial to man gaining an understanding of women.

Two basic attitudes have developed towards women by this time, Barnes explained. One was derived from the medieval period which said that women should be feared and the other attitude said that women were worthy characters and had a great deal of value.

These two inconsistent views were held by both men and women. Barnes explained. They led to the founding of a philosophical system known as Puritanism, Barnes continued. This system carried with it many conflicts that further caused difficulties between the sexes, he said.

White attitudes

Racial problem observed

Editor:

I am approaching this subject because I feel there exists a need for an opinion to be voiced concerning inter-racial between blacks and whites on the Cal Poly campus. With the homogenizing process rampant throughout there probably will be a show of genuine white supremacy displayed, unfortunately.

This "white supremacy" attitude, which tends to overpower the minds of many close-minded white males and females is an unfortunate common occurrence which blocks communication and alienates many blacks and whites alike.

His supremacy trip is shot full of holes by his black brothers and sisters who hold tight their collective self-worth. The supremacy (too ignorant to even be aware of his illegitimate supremacy attitude) is blind to the fact that he is the butt of much humor amongst the blacks.

The white town should wake up, strip himself of his fantasies and objectively evaluate such surrounding brother and sister before considering himself the small god.

Azman M. Brielham

Speech team talks its way to top honors

The Foothill squad from this university made an excellent showing at the Fall Forensic Tournament, held last weekend, Oct. 29-31, at Cal State Los Angeles.

Pet Chew took the third place trophy with his expository speech on "Emergency Cardiac-Pulmonary Resuscitation" while Linda Lesher came away with the fourth place honor with her expository speech on "The Nervous Systems of the Nerves." Marsha Vanderford and Suzanne Wesley, attending their first tournaments for Cal Poly, both made the final rounds.

Unfortunately, this organization died amidst the irrevocable population of a university and more directly due to the personal efforts of the then student body president. The burial of the ETA was not elaborated. How was it published? It died just as the season has died. Abandoned first, then the slow but constant build-up of history.

It's time to exhume this body and bring it to life. It's time to represent the feeling that an organization dedicated to the advancement of the student senate is necassary, not a luxury.

Why must you wait until the time necessitates legal action before you react?

Why must you, as a tenant, allow a landlord to take every advantage of you that he possibly can before you attempt to take action?

Why do you fail to inventory the damage before you move in rather than be at the landlord's mercy at the time of termination?

Why do you fail to get all contracts and agreements in writing?

The reason is obvious. But the fault is not to be put on you. For many times the tenant knows what he should have done but he unable to do because he or she is unaware of the law. When you are dying of thirst on a desert and you've offered water you don't ask for the legalities.

For a tenant to be prepared before the housing agreement is made can save a great deal of hassle and money at a later date. To know what to look for in a contract can save him later knowing beforehand what landlords have histories of past management with tenants can save problems from occurring.

Tenants should have a reason where they can find out the most important answers to the common questions that should be asked but are so often avoided or unanswered at all by some landlords within this community.

You all have the access to a resources needed to withstand the association such as the ETA. It's needed. It's time to protect yourselves because recurring rip-off that the student has to contend with.

A Student Housing Office is forthcoming. But it cannot be accomplished without support. Support is needed. People are damned tired of getting the wrong end of the stick on housing deals. People are needed the housing office to work together another Student Housing Association. You are needed.

If you have the desire to improve the housing conditions set the plights of a student tenants contact your school council representative or the Student Legal Services Office and let someone know.

Tenant help offered

Editor:

In 1971 a group of interested and concerned people from this community and the university started the San Luis Obispo Tenant's Association. ELOTA, as it was called, evolved into the Student Tenant's Association. This student oriented and operated organization was a landmark in the development of better housing conditions for the students here at Cal Poly both on and off campus.

Unfortunately, this organization died amidst the irrevocable population of a university and more directly due to the personal efforts of the then student body president. The burial of the ETA was not elaborated. How was it published? It died just as the season has died. Abandoned first, then the slow but constant build-up of history.

It's time to exhume this body and bring it to life. It's time to represent the feeling that an organization dedicated to the advancement of the student senate is necassary, not a luxury.

Why must you wait until the time necessitates legal action before you react?

Why must you, as a tenant, allow a landlord to take every advantage of you that he possibly can before you attempt to take action?

Why do you fail to inventory the damage before you move in rather than be at the landlord's mercy at the time of termination?

Why do you fail to get all contracts and agreements in writing?

The reason is obvious. But the fault is not to be put on you. For many times the tenant knows what he should have done but he unable to do because he or she is unaware of the law. When you are dying of thirst on a desert and you've offered water you don't ask for the legalities.

Computer architects: wave of the future?

In the past few years, computer architects have become more a part of our everyday life. They are now used where human imagination and ingenuity were previously the sole creators of ideas. Men in fields such as mathematics, science and engineering have accepted computers as aids in their work. But what about architecture?

Architects have often been thought of as people who sat at a drafting board working on ideas for long periods of time, using the method of trial and error to achieve a design. But now, with computer aid, an architect can achieve a design. But now, with computers as a part of the future, the answer returns. will be done in each room, the computer becomes a partner in fulfilling the desired qualities.

The computer then forms a matrix of relationships and gives each relationship a rating based on the designer's original rating. Some of these relationships will be less important than others and the computer will devalue these.

The computer will ask how many rooms are in the site plan and what they are called. It will also ask how many activities in the original client-architect list will be done in each room.

A rating is developed for each space which shows the direct measure of the number and importance of each activity relationship. Then, the computer develops a space-proximity matrix, which is a ranking for the need for any one space to be next to another, such as the kitchen being near the dining room, or all the bedrooms grouped together.

The goal at this point is to have an optimum use of space and an economy of distance. Pohl explained that architects often use very widely in the field, he said, is that architects have a tendency to be close-minded and might be scared to use it. Pohl feels that there is still room for creativity by the architect using this program, because the computer does no exterior design, and the designer puts in his own activities for those of the client's.

Looking at the future, Pohl foresees the architecture lab in the year 2000 to be composed of many time-sharing terminals, displays and screens that will show the designs and a computer memory that can draw and store information.

In the future, Pohl believes that architects will not only be using computers in their work, but also as a tool to assist them in their designs. The computer will be able to take care of the routine tasks, allowing the architect to focus on the creative aspects of their work.

The finished program allows the designer to fix the system to suit each individual client and to override the system if any problems develop. The designer will take the best layout, develop a building plan and put it on the site.

Pohl said that this system has been in general use for 10 years and has been used here for two years. The reason it hasn't been used very widely in the field, he said, is that architects have a tendency to be close-minded and might be scared to use it. Pohl feels that there is still room for creativity by the architect using this program, because the computer does no exterior design, and the designer puts in his own activities for those of the client's.

Food ecology program suggested for Poly

by DIANE BOOTH

Our affluent society takes for granted overloaded plates and well-stocked bellies so much that food waste has become commonplace. A Food Ecology program, jointly developed by Michigan State University and Coca-Cola, is being expanded nationwide to combat rising campus food cost by reducing food waste.

"The underlying cause for the waste which generates this kind of waste probably relates to the attitude toward food which we develop during times of plenty," said Vice President of Coca-Cola, Hal Gibson. He cited the monger of edible food tossed out at one of the main student's problem faced by colleges and university food service.

"It's not just students. What they are doing is repeating their approaches, it's over-ordering, over-cooking, under-cooking and a total portion control." Gibson said. He added, "It's an everyday thing."

More than 30 colleges and universities are using the program and many others plan to follow suit. Cal Poly participated in the program for 73-74, but the effects of the program were not fruitful enough to warrant repeating the program this year, according to John Lee, Director of Food Services. Cal Poly always has initiated some program to remind students in "Take What You Want—But Do Not waste."

Lee feels that students do not waste food here because they know they can have as much as they want. A variety of dishes is the way of lunches, salads and desserts also discourages waste says Lee. Students are encouraged to attend menu board meetings and to take advantage of the suggestion boxes and make their preferences known.

One cafeteria worker found a lot of untouched food seems off a conveyor belt where the students deal with their trays. The employee estimated at least 1 out of 4 trays has some untouched food left on it. It's not unusual to see a tray with half glasses of milk sitting so much as a sip taken from any of them, or handfuls of margarine or a piece of pizza without a bite missing, garnished with a piece of butter or a doss of pepper, he added.

The food ecology program is designed for consumer involvement, to cover a spirit of fun rather than gloom. It appeals to consumer intelligence with the idea of saving money by not wasting food helps keep prices down, of utmost interest to the consumer.

One joint not to smoke.

The constant-velocity joint, or "C-V" goes between the engine and the wheels of a Volkswagen. Oh, and they go out once in a while too, if one goes out in the middle of nowhere, there are no policeman, to convey a spirit of fun rather than gloom. It appeals to consumer intelligence with the idea of saving money by not wasting food helps keep prices down, of utmost interest to the consumer.

Counseling goes on day and night

Students' problems don't disappear at 5 p.m. and neither do the services geared to helping overcome them.

On campus the Counseling Center, located in the Administration Building, Rm. 211, is open from 8 a.m. to 10 p.m. Monday through Friday. The 13 staff counselors there help students cope with three main kinds of problems: personal, educational and career.

The decision to keep the Counseling Center open until 10 p.m. was made mid year. Director of the Counseling Center George Mulder explained the notion saying: "We just felt that problems didn't stop when we did."

To get to the Counseling Center open until 10 p.m. was made mid year. Director of the Counseling Center George Mulder explained the notion saying: "We just felt that problems didn't stop when we did."

Three other counseling services are available to students on a 24 hour basis.

Hotline is a community supported organization which for the most part deals with crisis intervention. Interested and concerned people are available to listen and counsel at 444-6181.

The county mental health program offers a wide range of services including a medical doctor, psychiatrist and psychologist. It is funded by the county and the state and staffs a complete hospital. The number is 844-7181.

At the Student Health Center a health educator is on call after 5 p.m. According to Mulder each doctor there is experienced in dealing with personal problems. The Health Center number is 464-8111.

Propositions 14, 15

Summaries of ballot measures

As a public service, Mountain Daily is publishing the arguments of the proponents and the opponents of the ballot measures in the Nov. 5 election. The summaries are courtesy of the League of Women Voters of S.L.O., P.R. Chairperson Gina Hafenreiter 544-6596.

Proposition 14

Should the president pro tempore of the State Senate be a member of the governing board of the California State College system? The State Constitution names the members of this board: the four elected members are the Governor, Lieutenant Governor, Speaker of the Assembly, and the Superintendent of Public Instruction. There are 17 appointed members.

Those who support Proposition 14 say it's important that some of the board members are directly elected by the people. The president pro tempore is the Senate Representative because he is their elected leader. The Lieutenant Governor, they say, represents the executive branch although he is officially President of the Senate. Those opposed say the colleges must be free of political pressure. Proposition 14 would add one more political position to the Board, and give the State Senate two representatives. This summary was prepared by the League of Women Voters. Call the League office for additional information on the ballot measures (980) 650-2350.

Proposition 15

Should the constitutional requirement that low-rent housing proposals be submitted to local voters be repealed? The State Constitution requires that certain federally aided low-rent housing be approved by local voters before the project can be built or acquired.

Supporters of Proposition 15 say local elections are expensive, aren't required for other public projects, retard development of needed housing and restrict California's use of federal funds. Opponents of Proposition 15 say low-rent housing projects don't pay taxes. The fees they do pay to local governments of services may not be enough. This could put a burden on other taxpayers. Communities should seek other types of low-rent housing.

"Yes" means low-rent housing projects will no longer need local voter approval.

"No" is a vote to retain the constitutional requirement that voters approve each federally funded project. For additional ballot measure information, call the League of Women Voters.

Self defense to be shown

A self-defense workshop will be held Nov. 5 in Crandall Gym beginning at 1 p.m.

Sponsored by the campus Women's Collective, the workshop will begin with a lecture on legal rights by sheriff's deputy Jeanne Phillips.

Amendment to be considered

(continued from page 1) the neighborhood, such as adequate parking space.

If the amendment is passed, Strong said the dining facilities could apply for use permits at the City Planning and Building Department. The permits would be effective within two months of application.

"The two main targets (of the ordinance) are Banner Glen and Tropicana," Strong said.

Banner Glen, 1060 Foothill, and Tropicana Village, 86 Broad, sold meals and meal tickets to nonresidents until June of 1974, when the city requested the student housing complexes to restrict their sales only to their residents.

The two housing complexes have complied with the city's request, although a few eyebrows are being raised as to the fairness of the amendment.

Mike Almola, general manager of Banner Glen, is raising his eyebrows to the situation and will chance to raise a few questions at the council meeting Monday night.

MOVIE REVIEW

'Torturing' tearjerker on film
by RICK GOUART

It's probably a bad time of year to relish in a heavy film tearjerker with cold and the flu being the least of your worries. Tears'll do wonders for your spirits. But it's hard to overlook cinematic entertainment that is so professional, so touching, so emotionally uninhibited as "Harry and Tonto." It is the type of film that makes you think instantly of Academy Awards, while you wonder why Hollywood can't make films that work as well as this all the time.

Art Carney is Harry, a retired college professor and widower who lives in a skyscraper New York City apartment with one of his oldest friends, a tomcat named Tonto. A victim of four muggings, Harry is disconcerted with his lonely present, longing for his youthful past.

Evicted from his home so the unsightly building can be removed, he moves in with his son and his family in the suburbs. But Harry realizes that he must have a place of his own.

When an old friend passes away, Harry leaves New York and its painful memories to visit his daughter in Chicago and his younger son in Los Angeles. With Tonto in tow, he begins the journey across the States to find new meaning in his life.

Like most films of this kind, "Harry and Tonto" once again brings up the question of what to do with our nation's elderly. Of course, no answers are provided. Growing old can be a depressing happening if you let it, the film says.

"Harry and Tonto" is really torturing to watch if you're not used to letting the tears flow. Before you have a chance to blink away the water that has welled up in your eyes, another moving scene is sent your way. Thankfully, the film is not a complete downer. There are the traditional comic moments interjected between scenes that make any script flow smoothly.

One thing that Mazursky does well is direct a supporting cast that is literally hard to believe. Every performance is so humanly natural and refined.

But, it is Carney's film all the way, performing in a role that is quite a reversal from his "Honeymoon" days. Carney's sentimental moments are emotionally perfect and definitely Oscar material. It's a trite thing to say but you won't forget him.

"Harry and Tonto" is then a film that you've got to see for it is indeed one of the best of the year.

Come in to Beno's and fill out our card and you're "OK." When you're a little short, and the banks are closed, come to Beno's. Beno's is open daily from 10 am to 9 pm. Saturdays from 10 am to 11 pm, and Sundays from 11 am to 5 pm. Your "I'M OK" card also entitles you to a STUDENT DISCOUNT.
Poly play on tap

A raucy and rugged story of Chicago reporters, criminals and politicians in the turbulent twenties will be the first production of the 1984-85 theater season of the Cal Poly Speech and Communication Department. The series: "Godspell," the modern musical adaptation of the Gospel of St. Matthew, erupts into a vibrant collage of song, dance and story at the performing Arts Center Theater on the campus of Allan Hancock College, Sunday night.

The musical does more to spread the good news of the gospel than a Baltimore Catholic, a stack of holy cards, and a box of gold stars.

The play opens with a stylized presentation of the "Tower of Babel," with members of the cast portraying major voices from the history of philosophy. This seriousness quickly divides into a kaleidoscope of color, song and movement, as ten performers spill onto the stage, costumed like Raggedy Ann clones to portray Jesus and his closest followers. They act out parodies, sight-gags, vaudeville routines, charades, visual puns and parables. These are centered around a series of key parables and incidents in the Gospel of St. Matthew.

The Hancock production, directed by Donovan Marley, is spectacular. The impact of the play hinges on the cohesiveness and organization of the ensemble and the members of the cast give brilliant and well-integrated performances. Todd Thruston radiates a mature yet child-like innocence of the role of Jesus. A strong performance is also turned in by Mark Harris who portrays John the Baptist.

The score of Godspell is a collection of musical styles - country-western, folk, saloon, and spiritual (a la New Grass). There is even a chorus in the style of Handel orchestrated for kazoo. This is undoubtedly the most musical part of the show. All musical numbers are well performed under the direction of Larry Delinger. Linda McKeon's choreography is also excellent.

Stuart Sutton's "back alley" set contributes to the high quality of the play as does the sensitive costume and lighting design of Bob Wells.

The audience is invited to join in this celebration of the Gospel. They sing, play charades and even join the cast for a cup of wine at intermission. The wine is really grape juice poured from a red Mountain bottle, but a sense of communion is achieved.

The production is tastefully done. I could find no departure from conventional theatrical doctrine; only a powerful restating of the Gospel of St. Matthew in contemporary terms.

"Godspell will run nightly through tomorrow night. Ticket information may be obtained by telephoning 824-6015.

The leading characters in "Front Page" are Hilda Johnson, (Pat Cherv) a rough-and-tumble newspaper reporter whose work is a disease with him, and Walter Burns (Bob Morris), Hilda's managing editor who would double-cross his mother for a "scoop" on a jail break.

The play's story which is told in confusion and intrigue with reasonable humor, has to do with Burns' efforts to prevent Hilda, his new reporter, from jumping the paper to become an advertising agency executive and a conservative husband. Hilda's opportunity of capturing an escaped murderer exclusively for his sheet gives Burns the time and chance to put a Malthusian brain to work on a promising solution to salvage the problem.

The Cal Poly production of "The Front Page" is directed and designed by Murray Smith, of the Cal Poly Speech and Communication Department. Tickets are on sale at U.U. Information Desk from 10-1 daily. Admission is $1.00 for students, $1.50 general.

Gospel according to 'Godspell'

"Godspell," the modern musical adaptation of the Gospel according to St. Matthew, erupts into a vibrant collage of song, dance and story at the performing Arts Center Theater on the campus of Allan Hancock College, Sunday night.

The musical does more to spread the good news of the gospel than a Baltimore Catholic, a stack of holy cards, and a box of gold stars.

The impact of the play hinges on the cohesiveness and organization of the ensemble and the members of the cast give brilliant and well-integrated performances. Todd Thruston radiates a mature yet child-like innocence of the role of Jesus. A strong performance is also turned in by Mark Harris who portrays John the Baptist.

The score of Godspell is a collection of musical styles - country-western, folk, saloon, and spiritual (a la New Grass). There is even a chorus in the style of Handel orchestrated for kazoo. This is undoubtedly the most musical part of the show. All musical numbers are well performed under the direction of Larry Delinger. Linda McKeon's choreography is also excellent.

Stuart Sutton's "back alley" set contributes to the high quality of the play as does the sensitive costume and lighting design of Bob Wells.

The audience is invited to join in this celebration of the Gospel. They sing, play charades and even join the cast for a cup of wine at intermission. The wine is really grape juice poured from a red Mountain bottle, but a sense of communion is achieved.

The production is tastefully done. I could find no departure from conventional theatrical doctrine; only a powerful restating of the Gospel of St. Matthew in contemporary terms.

"Godspell will run nightly through tomorrow night. Ticket information may be obtained by telephoning 824-6015.

The leading characters in "Front Page" are Hilda Johnson, (Pat Cherv) a rough-and-tumble newspaper reporter whose work
Marching to a different style

"Our Saturday morning rehearsal was a disaster, but that evening I felt like all my students just graduated," said William V. Johnson, conductor of band.

Last Saturday night the Cal Poly Band received one of its very few standing ovations following its half-time performances. Johnson felt the band had just "scored another touchdown."

Members of the visiting Northridge band later asked how the band photographers do." But not to be outdone by the camera the band has promised a better yet performance.

by SCOTT HARRISON

Poly Band could march and play at the same time. Walking around and blowing a horn is easy, but try it while running or high stepping.

Cal Poly is one of the few West Coast Bands to use the high stepping Big Ten style. Johnson brought the style to Cal Poly from four years of marching at Indiana University and another at University of Michigan.

Johnson and the 132 member band practiced for twenty hours for the eight and half minute show. Johnson said, "After an eight and half minute show, such as Saturday's "Soul Train," the members come to the side line completely exhausted. You have to be in as good a shape as an athlete." Johnson said "Football is a game of enthusiasm, both for the fans and players. Why not the band too?"

Johnson firmly believes the Big Ten style best expresses the enthusiasm needed. The band members also must have personal enthusiasm. According to Johnson, by the end of a performance, band members live or enthusiasm only because the instruments equal about 800 pounds.

This Saturday the band is planning to high step through a show entitled, "Poly Graffiti - The Years of Rock and Roll." Featured songs will be "Rock Around the Clock," "Little Darlin," "At the Hop" and "The Way We Were". The show was especially arranged by John Higgins, a professional arranger in Milwaukee, Wisconsin.

The band has to be a close knit group with professional pride, otherwise the long hours of practice, physical exertion, and constant hassles would quickly lead to a large amount of quitting. According to Johnson, this group has the closeness and professional pride to come off a poor practice and give the excellent performance at the Northridge game.

"The members of the band must mentally prepare themselves for a halftime performance. Just like a football player must prepare himself for the physical exertion and concentration needed for a game, so must our band members," said Johnson.

After the season is over the best members of the unit are organized into the Symphonic Band. This group goes on tour and plays in the Winter and Spring concerts.

The remainder of the band is formed into the Concert Band. This unit performs at Poly Royal and other outdoor events.

On November 16th the entire band will join with the Jazz Band for a special concert in Champagne Auditorium.
Car freaks don’t be fuelish

A person sometimes starts to wonder about people around him when he sees them doing detrimental things.

In this case, I’ve got a case to grind with a group of people whose antics I find hard to understand. The automotive freaks.

Have you been hibernating in Siberia for the past year? Do you ever pick up a newspaper for any purpose except to wipe up spilled coffee? Do you ever watch the tube long enough to catch anything besides the latest Western Western 600, or Miller High Life Classic? Is the only magazine you ever read Hot Rod?

Well in case you’ve been tuned out to the rest of the world there’s a crisis going on. You’re not helping things a damn bit.

You see the nation’s which ever the bulk of the world’s oil decided they weren’t getting enough green stuff for it. So they did the unnatural capitalist thing and raised the price. something of the order of 800 per cent in the last 18 months.

All of a sudden the rest of the world had to sit up and take notice of these ugly slaters. End of financial coup.

Some people are just plain uncouth. Here our president gets up before a bunch of schoolkids and pledges with us to use less energy to help fight inflation. In a few days later everybody gathers to cruise the parking lot. It seems neither mom, nor apple pie shall impede the progress of the American driver.

And last you autocrossers get the impression I’m picking on you alone. Don’t. In fact you’re probably one of the lesser evils. But that doesn’t excuse you.

As if there weren’t enough problems, “America Graffiti” has caused Polly to join the high schoolers for the Thursday night cruise down Higuera street. It seems at 80 cents a gallon.

And there’s always the guy with the souped up Mustang, complete with headers, dual carbs, and God only knows what else. To make it faster, louder and more wasteful.

The shock to the world has been tremendous. The entire world is facing disaster of one sort or another. Not five years from now, but right now this is where those of you, who get high on gas fumes and carbon monoxide, come in. The world is paying through the nose for every drop of it used and you guys waste the stuff.

You know what the biggest event on campus was a couple of weeks ago, that got a full page of pictures in Mustang Daily? An autocross. For crying out loud. A few of people driving round and round the parking lots, and they weren’t even looking for a parking place three minutes before class.

And beginning of tremendous problems for everybody else.

The shock to the world has been of tremendous magnitude. The fortunate nations are suffering from rampaging inflation. Others are living national bankruptcy. And still others are going hungry.

Some people are just plain uncouth. Here our president gets up before a bunch of schoolkids and pledges with us to use less energy to help fight inflation. In a few days later everybody gathers to cruise the parking lot. It seems neither mom, nor apple pie shall impede the progress of the American driver.

1956 Poly graduate is Grand Marshall ...

(continued from page 1)

With a quick grin, she remembers her graduation ceremony in Mustang Stadium. "I wasn't going to attend classes with the agriculture boys and other boys." The smiling grandmother also noted that the trend in bare feet and long hair seems to be fading.

Mrs. Hanlon, however, is not the only Poly grad in the family. Her granddaughter, who will attend Poly. Upon her graduation, the elder Hanlons returned to their ranch for the next seven years.

Permanently settled back in San Luis Obispo, the Hanlon family moved to San Luis Obispo so that Jerry could attend Poly. Upon his graduation, the elder Hanlons moved to their ranch for the next seven years.

The entire witchcraft hysteria began when ten girls, aged 13 to 15, began to exhibit strange symptoms and attributed to being possessed by witches. Barnes explained. These girls rose from obscurity of youth to powerful positions in New England.

Barnes feels that if the males of that time had bothered to gain an understanding of the underlying motives behind the hysteria, they would have realized it was a sexual fantasy that was occurring. But, to admit this, man would have had to admit that the sexual nature of women that men found so unsettling really did exist, he said.

The girls later admitted that the idea of being possessed was a hoax. But, to admit this, man would have had to admit that the sexual nature of women that men found so unsettling really did exist, he said.

But, to admit this, man would have had to admit that the sexual nature of women that men found so unsettling really did exist, he said.

The girls later admitted that the idea of being possessed was a hoax but before it ended, twenty people were killed. "It was a tragic misunderstanding of the nature of women and the fear of her sexuality," Barnes said.

Tell it like it is
What type of Poly entertainment would you like to see?

by Mary Anne Lapointe

Call Jacobelli, History, Junior:
More dramatic plays, either student or professional, as long as they were good.

John Boyes, Agricultural Business Management, Senior:
Western entertainment. I'd like to see Loggins and Messina and more dances. I think Poly lacks in a variety of entertainment.

Mike Martin, Crop Science, Sophomore:
Neil Young, Bread and Butter, Alkaline, and other bands. I enjoy more variety and an outside influence on the campus.

Steve Blair, History, Senior: Real burlesque, classical music, like what was at Chance last weekend. We need a little variety and an outside influence on the campus.

Loren Karluk, Industrial Arts, Junior:
The Rolling Stones, Grand Funk, Robin Trower and Lynyrd Skynyrd. We need some heavier and hard rock.

Grass Roots fights poverty

by CONNIE PITTS

Maxine Lewis is a remarkable woman. She has enough energy to set off the fireworks at a Fourth of July celebration. Beneath this energy lies a heart filled with compassion and concern.

Mrs. Lewis is the director of Grass Roots II, a Community Action Program dedicated to fighting poverty. With the help of a staff and volunteers, she has managed to smooth the rough paths of life for many people.

Grass Roots II, 341-A Higuera Street, has been known as "a place of last resort for all who need help," according to Mrs. Lewis. The bright yellow exterior of the building displays the warmth of a woman who always is willing to lend a helping hand.

A total of $15,000 has been released to EOP by SAC . . .

VIT. A GRANDE RESTAURANT
Garden is place of earthly delights

by LYNETTE BAYLESS

The only botanic garden from Santa Barbara to San Francisco soon will be located on the 66-acre Poly Canyon.

The garden will consist of a Chumash Indian Village, as well as areas with native California plants. Planned areas will include a cypress forest, an oak woodland, a chaparral, native grassland, a fern garden, and a dome-shaped structure.

The garden will serve as a site for the new Botanic Garden in Poly Canyon.

Students work together to level the garden, which soon will be located in the new Botanic Garden.

The garden will serve as a recreational area and will be useful for classes to use.

According to Dr. Rodin, the area where the garden is located is unique because there are native grasses found there which are not found where the cattle graze.

The plants in the garden will be watered by a drip irrigation system. Money will be needed for the pipes and faucets which will help pay for materials.

According to Sue Cheater, a junior history major, the project was set aside by Dr. McPhee. The project was suggested by education major Jim Owens.

According to Dr. Rodin, the garden was designed to preserve the ecology of the area.

According to D.R. Hoover, the anthropology instructor, the project was designed to preserve the ecology of the area.

Students interested in joining the club may contact club advisor Jim Owens at 546-4378.

KCPR back up to 2,000 watts again

KCPR, Cal Poly's radio station, has returned to broadcasting at 2,000 watts after several months of technical difficulties. The difficulties forced the station to reduce its broadcasting power to ten watts at the end of last spring quarter.

KCPR began in 1961 as a tiny 1.8 watt station, with its broadcast heard only on the Cal Poly campus. With the 2,000 watt increase, which was authorized on May 30, 1984 for a short time, the station now reaches the area between Santa Maria and Cambria.

KCPR listeners can turn the dial to 88.3 FM, to hear programming which includes public affairs programs, classical music and progressive rock. The non-commercial radio station offers community music on Tuesday nights and a jazz and oldies show on weekends. The station also broadcasts a classical music program, Pacific Concerts, from 3 to 5 p.m. on weekdays, with a special evening concert on Monday nights.

KCPR welcomes suggestions from its listeners. Any requests or suggestions can be left at the station in Rm. 301 of the Graphic Arts Building or can be called in at 544-4940.
Fat is where it’s at for Poly’s Sherlock

by JERRY CROWE

“I don’t even look like a football player,” says Cal Poly defensive tackle Dennis Sherlock.

Don’t let him fool you. Although he looks may be deceiving, in the Mustangs’ first six games this year, Sherlock has been outstanding. He is the defensive standout on a team that has had little to cheer about during a 3-3 season.

Last week against Cal State Fullerton he sacked Mustang quarterback Bill Planagan three times and also recovered a fumble. The 345-pound junior college transfer was named CCAA defensive player of the week.

Four times he has been honored as Cal Poly defensive player of the week, including the games against Cal Poly Pomona and Cal State Fullerton, which he regards as his best games.

“I played pretty well last week, but I feel I had better games earlier in the year,” Sherlock said. “Against Pomona I was driving my man out on nearly every play. That’s nice, but there’s a lot more to it than that.”

The junior industrial arts major has been doing a lot of things right this year, but is disappointed with the team’s performance thus far after helping lead his JC team, Pierce College, to a conference crown last fall.

“We have a great team, but we’re so inexperienced that we make a lot of mistakes. It was a tough loss to take after being on a championship team last year, although I think we’re going to go out winners in our next four games,” Sherlock said.

Sherlock was twice all-conference at Pierce, as a tackle in his freshman season and as an end last year. He was switched back to tackle at Cal Poly because he is better built for the position and also prefers it in end.

“Sherlock is playing as good or better than any defensive tackle we have had,” said Mustang defensive line coach Bobbie Lane. “I would be a tremendous injustice if he fails to make the all-conference team. He’s very very strong and very quick.”

Quickness has been the key to the big tackle’s success, enabling him to outmaneuver offensive linemen who sometimes outweigh him.

Sherlock admits “I don’t even look like a football player. Actually, I’m fat. Because of this, opposing linemen don’t think I’ll be able to move until they see me play. In that way, I’m deceivingly quick.”

Actually, the 6-4, 345-pounder is trimmed down from a spring weight of 360 and said he’s at the best shape of his life. At one point in his career, Sherlock weighed 386 pounds. “I was so fat I couldn’t even bend down to tie my shoes,” he said.

Next year he hopes to flatten his stomach even more, so he can be part of what he calls “a potentially great team. We shouldn’t lose any games next year and no more this year.”

Following his outstanding season last year, Sherlock was heavily recruited by more than a dozen schools, including Boise State and Oregon, and almost didn’t make it to Cal Poly at all.

He went to Oregon for spring practice but left after about four days of rain and without ever seeing any of the school’s campuses. Sherlock was then set to go to Boise St., a school which consistently has one of the top Division II teams in the nation.

“I had my car all packed and was planning to drive to Boise in a few minutes. Coach Lane called me about two minutes before I was going to leave,” he recalled.

Undoubtedly, Sherlock would like to play for a winner and, according to him, the Mustangs are just a year away.

Poly rodeo team is always tall in the saddle

The bunkhouse is full of top-notch cowboys every year

by BOB COX

There’s an old adage used by football coaches, politicians and gamblers alike, that aptly describes the experience of the Cal Poly rodeo team over the past couple of decades.

Success breeds success.

Since 1960, when Bill Gilford first took over as coach and advisor, the rodeo team has enjoyed a spectacular run of success marked only by two failures in the annals of athletic accomplishment.

For 16 years, a string of victories included the National Intercollegiate Rodeo Association. Only once in that period did Cal Poly drop as low as second in the region. Four times they captured the NIRA championship.

Never in the 16 years did a San Luis Obispo squad finish worse than eighth in the NIRA finals.

And unlike some other dynasties, the product didn’t collapse when the creator left. Gilford turned the reins over to Ken Scotti last year and it was one more regional title for Poly and, although not a national championship, it was a string of success matched only by few马

The bunkhouse is full of top-notch cowboys every year.

Muatanga members dominated the West Coast Region of the National Intercollegiate Rodeo Association.

In Boseman, Mont., Poly had a national title. The first team was built by Freeman brothers who rodeoed for us, but not a few regional titles. The most important was clinched in 1960, at Clayton N. M.

There were a few guns who were the bulk of that team.

There was Brittany Freeman, the first of three Freeman brothers who rodeoed for us, Bill Nickson, Marlo Barbier and Roger Bollen. They were the backbone of the team that year,” said Sifford.

The 1964 team, the one that finished second, was loaded with talent. Freeman, Ralph Londo and C.W. Adams, who was national building champion during the time, were part of the first place team that year.

The 1966 team, the one that finished first, was loaded with talent, too. Freeman, Ralph Londo and C.W. Adams, who was national building champion during the time, were part of the first place team that year.

Building a body-builder

Archies build exercise station in Poly Canyon

by PETE KING

Sprinting and straining to complete his second pull-up at one of the new exercise stations in Poly Canyon, Jim Webb, Jr., doesn't appreciate that the wooden stations he and his team spent a lot of time building are relatively new to Poly, and that they're located near the Poly Station and Student Union.

They've been there for a while, and now it's time to put them to work. The stations are designed to help students exercise, and they're located near the Poly Station and Student Union.

The first station is mid-way down the canyon, while the remaining three are set up near the architecture projects built in the canyon. The first station is mid-way down the canyon, while the remaining three are set up near the architecture projects built in the canyon. Webb says that a lot of thinking went into the project.

He adds that the stations aren't as fun as bowling or golf, but when combined with running they offer several times as many physical benefits.

He says, however, that the exercise stations break up the monotony of a long run.

The first station is mid-way down the canyon, while the remaining three are set up near the architecture projects built in the canyon. Webb says that a lot of thinking went into the project.

"We spent a lot of time planning which exercises we wanted to use, and which location would be best. We had to take into consideration the livestock in Poly Canyon, as cattle would be running away from the stations all the time. Then we had to consider how they'd affect the beauty of the environment."

So Horton built the attractive stations out of heavy wooden posts (eight-by-eights).

Included in the stations are chin-up bars, dip bars, air-up spots and places to do push-ups, but to name a few. They also put a few special touches into the exercise apparatus, to make them tougher.

Right now, about four physical education classes are using the Vita pavilions at Poly. Webb says that more classes will use it next quarter.

He adds, however, that anyone can use the stations and that they are close enough to campus so one can run through a complete circuit—a two-and-a-half-mile loop. He says the exercises in a regular classroom.

"We say that students can make the stations as strenuous as they want."

(continued from page 1)

In ‘72 the women brought home second team honors although no girl placed in the top eight in any event. Callie Lemans back for her third time, won the 800 meter run and the team finished third overall.

Gibford readily admitted that much of the success over the years has been due to the non-Cali Poly contributions over the years. Halford readily admitted that much of the success of Cal Poly’s rodeo team, "Run the your scholarship program for us. And the guys that have graduated, people like Cotton Rosser, the Ferguson’s, Rodney, they’re always recruiting, telling people to come here."

Although an old rodeo hand himself, he was on the first Cal Poly team ever to travel for competition back in 1967, Gibford downplays his role as coach. "I think more than anything, a coach has to try and furnish the right environment. You have to make the facilities and the stock available so the kids can practice. These kids usually have the get-up and go so you don’t have to tell them to practice. If the facilities are there they’ll be out there," said Gibford.

"That’s where the Administration and the Al’s have been helpful. We have the arena and we have the stock to practice with."

Gibford said students often furnish their own roping stock but when, they can’t the school has backing stock. Roping has always been provided by schools however, Gibford said. So there you have it, the magic formula for Cal Poly rodeo success.

Soccer team will resume league action

After a tough 5-8 loss in a double overtime to University of California Santa Barbara Wednesday, the Mustang soccer team will return to league action tonight.

Cal Poly will travel south to face Loyola in the Mustang's fifth league match of the season. Cal Poly's record is 3-1.

Mustang coach Carmen Beaco calls all non-league matches "friendly." But the one against UCSB was a tough well-played game, according to Beaco.

UCSB scored the winning goal with only five minutes left on what Beaco called a lucky shot. He said that the Cal Poly goalie managed to get his hands on the shot, but still got by him.

Beaco was still pleased with his team's performance. UCSB has a Division University Division school and has played teams like UCLA (one of the top-ranked teams in the nation).

Also, several of Beaco's key players didn't make the trip to Santa Barbara, instead staying at home to heal their injuries.

Beaco made the players sit out the game out because he is more concerned with having them fit in league action before facing tough Georgia.

"We're pretty good shape," Beaco said. "But there are still traces of the injuries left."
