Gentry relives tale of Manson clan

by CRAIG REEM
Daily Associate Editor
(Continued on page 6)

Carcinogenic use regulated

LOS ANGELES—California became the first state in the nation yesterday to require companies to report use of two substances, asbestos and vinyl chloride, that are believed to cause cancer. After Sept. 1, manufacturers planning to use either substance must report it to the State Division of Industrial Safety or be subject to a fine of at least $300.

Increase in state school aid asked

SAN FRANCISCO—State schools Superintendent William Ries said yesterday that the state's new economic forecast means $300 million to $300 million for the state's rosy new economic forecast.

Diluted air rules

WASHINGTON—The House approved a major revision of then air rules yesterday, handling the automobile industry a major victory by agreeing to postpone and weaken a scheduled tightening of exhaust standards due to take effect later this year. Other restrictions were dropped permanently.

Haldeman to reveal Watergate

LOS ANGELES—Former President Richard Nixon's top aide said yesterday that Nixon is dissatisfied with Nixon's televised explanation of the Watergate coverup. The top aide said yesterday he is dissatisfied with Nixon's televised explanation of the Watergate coverup. He said the televised interview last week was not the story that Nixon wanted told, but a story that was forced on him.

Gunman release four Dutch children

ASSEN, NETHERLANDS—Asian gunman released four Dutch children yesterday that everyone is a racist but that some people, such as the Russians and Swedes, are bigger racists than others. "It's impossible not to be a racist if you talk of race and that is the racist nature of the closed society," he said. "Nobody is immune. I'm only saying that overcoming cultural insecurity is something you have to work at very consciously."

Trade deficit reaches new low

WASHINGTON—The U.S. trade deficit in the first four months of 1977 already has surpassed the total for the worst trade year in history, the Commerce Department announced yesterday. The deficit now stands at $3.5 billion, well ahead of the record $2.4 billion for all of 1976.

In the past, large trade deficits have tended to decrease the value of the dollar and contributed to the nation's problems with inflation.

Gunman release four Dutch children

Amsen, NetherLands—Asian gunman released two girls and two boys yesterday from a besieged elementary school where they were held hostage since the first day of school. All the children, aged 7-12, complained of being ill in what marked the first release of hostages by the Dutch gunman. Telephone negotiations continue with government officials.

"Russians and Swedes racists"

LONDON—Ambassador Andrew Young, on his way home from an eight-nation African tour, said Wednesdays' "cultural insecurity is something you have to work at very consciously."
Here I am on the shore of the English Channel, which by some quirk of fate seems to have become my favorite body of water. It is not, as you may think, because of the water, which is cold, gray, and green with seaweed, but rather because of the sea wall. The sea wall is a wall of stone, perhaps 20 feet high, with a path along the top where people can walk and look out over the water. It is very peaceful and quiet, and the sound of the waves lapping against the wall is soothing. I often spend hours just sitting there, enjoying the view and the sound of the water. It is a place of reflection and relaxation, and I always feel refreshed and rejuvenated after a visit. If you ever get the chance to visit the English Channel, I highly recommend taking some time to walk along the sea wall and enjoy the peacefulness of the water.
Tis the season for hay fever

by J.N. SBRANTI
Daily Staff Writer

It’s easy to spot them amid your lunch crowd on campus. They’re sneezing and sniffling, rubbing their eyes, scratching their itchy nose, reaching for a handkerchief or a tissue. These are your hay fever sufferers and this is their season of misery.

San Luis Obispo is one of the areas in the state that suffers the most from the annual hay fever season. This causes a substantial rise in the health center each spring and makes the spring season more bearable.

The campus health facility can give the desensitization serum, usually in shot form, but the initial testing and dosages must be administered off campus by private allergists.

For whom the wedding bell tolls;
Tying the knot's a big decision, you'll have to make.

Writing wedding contracts
by KLENA-MARIE KOTTEN
Daily Staff Writer

According to California law, when a couple marries, all property owned becomes marital property and is subject to the equitable distribution of assets and liabilities of both parties. Marital property includes anything acquired during the marriage, regardless of who earned it or who bought it. This includes property acquired before the marriage, as well as any gifts received during the marriage.

The advantage of a contract is its flexibility. A premarital agreement can be tailored to meet the specific needs and circumstances of each couple. It can help protect the financial interests of both parties, and it can also provide clarity and certainty about the distribution of assets and liabilities in the event of a divorce or death.

The disadvantages of a premarital agreement are that it can be a contentious issue, and it may be seen as a sign of distrust or lack of faith in the relationship. It can also create tension and mistrust, and it may be perceived as a way for one party to control the other.

Your financial advisor or lawyer can help you navigate the complexities of a premarital agreement. They can help you understand the implications of such an agreement, and they can help you draft a contract that is fair and balanced for both parties.

The problems with choosing a mate

Now, married students' best bet for housing is to be found outside of San Luis Obispo in cities like Arroyo Grande, Pismo Beach, and Osos. Lambert said, "Due to the high cost of rents and the lack of facilities available, Lambert and other married students may choose to live in outside of San Luis Obispo."

Announcements and invitations vary widely. Cal Poly offers a bouquet package for $100 and a wedding dress for $2,000. There is no question as to what it expected from a marriage, and values.

Married students feel the pinch

"Getting married—choosing a mate for life—can't quite cut and dried. For the first several years of marriage, this means financial ramifications, decision making, and setting priorities."

"The problems with choosing a mate often intercede Individual's long-term satisfaction with the marriage."

The problems with choosing a mate which lead to divorce. The main reason, which is no secret, is that all too often people marry too young, usually in the late teens or early twenties. After a short courtship or dating period, a young couple...

commentary

"Married students feel the pinch as they work to adjust to the responsibilities of married life. This is because the rents there are lower..."
A bachelor party with class

KEVIN F. FALLS
Daily Associate Editor

There can be more to throwing a bachelor party than just showing stag videos in a side room and trying to make the groom puke. It just depends on how creative the host wants to be.

There is a student at Poly who didn't want to throw the usual type of stag party for a boy who was about to tie the knot. It could just be too easy.

About a month before the party, she had all her friends write down their memories of the groom. They were compiled and parts were made to make the party a surprise.

When the groom arrived at the apartment, he was greeted by 18 very happy smiles. The dinner was served, the beer consumed and the partying was a hilarious success.

“On the map, Isle Vista and San Luis Obispo are only half an inch apart. That's what made the difference,” Phillips explained.

“As things stand now, in Cal Poly's long range master plan, land is set aside on campus for future married student housing, but Phillips believes it is highly unlikely that any will be built within the next 10 years,”

The California State University and College Trustees do not want to invest any more money in student housing, Phillips said, because many campuses are now running on-campus housing facilities at a loss.

Cal Poly happens to be an exception to this however.

ARCTIC CIRCLE 'Helter Skelter' a tale of woe

(Continued from page 1)

LAPD interrogations, on tape, things a writer is very rarely exposed to. I had time in me and how I handled it. I was able to write the book with a certain freedom. He later went over it chapter by chapter and corrected errors and misconceptions, especially legal points I wasn't familiar with.

MD: Why did it take so long to research and write the book?

Gentry: One reason was that they (the Manson family) didn't want killing people. There were a lot of other events, like my being put on Manson's death list.

When I started on the book, Bugliosi was already on the list. You would have been vulnerable if people had known that I was working on the book. He would have said I was being vulnerable through me. So it was very quiet for a long time. I couldn't go around talking to people about what I was doing.

By the time I finished the book, the majority of the males of the family were in Northern California prisons and all the people that were still out, like Squeaky and Sandy, had moved up to Northern California to be near them on visitor's days. I was never sure if they would recognize me because I had talked to them extensively.

MD: Manson had an incredible list of local, state and federal offenses. He was always trying to get probation. Does this tie in with some type of power so get

Gentry: I think both. Manson was a remarkable con man. Obviously that helped him at certain times. As far as his being released, the last time (he was released) Manson bragged—(literally)—went down on his knees—and cried and said he would never be able to adjust to the world. They let him go.

MD: With our criminal system, isn't Manson eligible for parole in 1978?

Gentry: Let me qualify that. He is eligible as apply for parole. Manson—in the foreseeable future—will never be released.

MD: Manson said he would kill Bugliosi. As co

Gentry: I think both. Manson was a remarkable con man. Obviously that helped him at certain times. As far as his being released, the last time (he was released) Manson bragged—(literally)—went down on his knees—and cried and said he would never be able to adjust to the world. They let him go.

MD: Could a sentence be as easy to get away with? I mean, could someone else pick up the gun he kept beside him in a gun shop and if it would or would I be like the LeBran really and try to stop them out of it while they were whacking me?

I never came to a settled answer. I think I would have used it.

MD: At looking at the Manson followers and those who were part of him, are there any kind of group, whether it is the Beatles, the Rolling Stones, the followers or any other group, where the people get confused in their minds and give you this devotion to a person, or can this happen with any kind of group where you...? Would it be considered an aberration that was part of his time as well as any other time?

I am bothered, however, by any kind of group, whether it is the Beatles, the Rolling Stones, the followers or any other group, where the people give up on their own minds and give you this devotion to a person, or can this happen with any kind of group where you...? Would it be considered an aberration that was part of his time as well as any other time?

Gentry: I don't feel that I have a kind of involvement or a connection with the book and having been with it for so long, I don't feel sad for them, the way of the way of the things that could happen to those who could become involved and so on...

MD: You have dealt with a group of people who could kill—and do it tragically and frightfully. What, if anything, has that told you about human characters?

Gentry: I like to think that I was writing about events.
Top ten finish is tracksters' goal

Coach Steve Miller and his Cal Poly track team start competition in the NCAA Division II finals today at Fargo, N.D. with only one thing on his mind; finish in the top ten. That won't be too over considering Poly's place finish last year. However, Poly has been a national top ten finisher; in the last 12 years, the Mustangs have been listed below the top ten spot only once—1970 when it was tied in 12th and 1972 when they placed 15th. Poly has taken NCAA crowns in 1968, 69, 71, 75 and third in '66, '65, '64, '77.

Seventy Mustangs qualifiers will compete in six events, spearheaded by quarter-mile Sonic Lloyd.

Lloyd is entered in three events, the 400 and both the 400 and 1600 meter relays. The senior has already logged 46.5 over 400 meters which is the fastest Division II time in the nation. It also earned him the California Collegiate Athletic Association championship in that event.

"He's got an excellent chance to become the school's first ever national quarter-mile champ," said Miller.

Poly has not turned out a national champ since Clancy Edwards took the 100 and 220 dashes in 1958. The best performance turned in by a Mustang quarter-miler has been Bob Newton's second place finish in 1969.

Lloyd was recently honored with the Jon Dana Memorial Award which is given annually to the Most Valuable Track Athlete. Dana was a two-time All American in 1964-65 as an intermediate hurdler.

The MVP will be teaming up with Mike Bartlett, Jeff Weigel and Bart Williams to form the 1600-meter relay team. The outfit has one of the best times in the nation among Division II teams. Poly covered the mile course in 5:10.96. The metric equivalent would be about two seconds faster which would rank the Mustangs in the same class as Adelphi and Kentucky State, two powerhouse in the relay. They ran 5:06.3 and 5:06.8 respectively in the Penn Relays in April.

The Poly intermediate hurdlers will all get a crack in the finals. Bartlett and Williams, who currently hold the third and fourth fastest 400 intermediate-hurdle times in the nation, will try to chalk up points for the Mustangs. They face stiff competition in CCAA champ Sam Turner of LA State and Kentucky State's Randolph Williams.

Turner has timed 49.09 with Williams of Kentucky landing a 50.7 clocking. Poly's Bartlett and Williams have hit the tape in 51.3 and 51.5 respectively.

Williams scored the Mustang's only eight points in last year's meet when he finished second in the intermediates.

Jim Warrick will be Poly's representative in the 10,000 meters. He figures to petition in the NCAA Division II (200) event today at Fargo. N. D. with only one thing on his mind; finish in the top ten. That won't be too over considering Poly's place finish last year.
Horsemen in cutting competition

by DOROTHY NEWELL
Daily Staff Writer

The horse and rider enter the arena and face a small group of cattle. With little or no guidance from the rider, the horse carefully moves the group of animals and gently separates one from the rest.

This is the sport of cutting, to be demonstrated at three different cutting shows this weekend. The first show will be Saturday, May 28, at the Wayne Vaughn Ranch, one mile southeast of the San Luis Obispo Airport on Davenport Rd.

The second show will be held in the Beef Unit Arena. Alex Madonna will sponsor the May 30 show at the Madonna Inn.

Cutting is a sport requiring a tremendous amount of skill and patience. It is an entertaining event enjoyed worldwide and involves more money than any other non-racing equine sport.

Through instinct and intensive training the horse is able to perform a series of quick, sharp turns or cut around an animal, causing it away from its group. The horse must then restrain the animal, keeping it in a designated area by itself.

After the horse has succeeded in keeping the animal in one place for a short time, the horseman gives a signal for his mount to allow the animal to join the group and the process begins again.

A well-trained horse should be able to perform this skill in less than a minute. The scored must be quick, precise and careful.

Horses are judged on their ability to control another animal and the horseman are judged on their riding skill. Other factors come into consideration such as the time involved and the rider’s ability to refrain from forcing his horse into a decision.

A certain amount of points are awarded to the horse and rider for the skill they demonstrate, each point representing one dollar. The four top contenders in each competition are allowed to collect the money they have earned throughout the competition.

Competitors come from all over the western United States to perform in this event, including several from Cal Poly. A $200 purse is awarded to each of the four winners in the open class. The four winners of the non-professional class will receive $150.

These competitions and the judges are approved by the Pacific Coast Cutting Horse Association and the National Cutting Horse Association. These competitions are the championships for each of the organizations. The shows will begin at 9 a.m. Admission is free.
