McPhee Union: Parking lot turned campus hub

BY KARYN GRAVES
Daily Staff Writer

The Julian A. McPhee University Union, which opened on March 6, 1971, housed Cal Poly's first student center. Bowen said.

"We didn't know how we ever got along without the union," said Donald McCaleb, director of Cal Poly public affairs. "There was really no centralized activity facility in the campus before the University Union was built," he said.

McPhee Union: Parking lot turned campus hub

The money behind University Union Week comes from a $350,000 budget controlled by the University Union board of Governors, an independent group made up mostly of students.

Ten of the 15 voting members of the board, including Chairman Joe Bowen, are students. Although Associated Students Inc. holds the lease on the building, the University Union has its own income and the board sets its own policy.

Board members are appointed by the university president, not by ASI. The board reports to the student senate. But the senate does not overrule the board's decisions, said Bowen, who is an industrial technology senior.

"It's not political," he said. "We've got left alone to do our job."

The University Union's income is from registration fees ($14 a quarter for each student), games area earnings, lease agreements with Cal Poly Foundation for food services and the bookstore, space rentals to conferences, and 10 percent of the earnings of money-making events held in the Union.

Expenditures include the salaries of everyone employed by the union, from custodians to the union manager, utilities and supplies, repair and replacement, loan payments, and University Union Week.

"We are trying to show the students what we have in the union then to give them a really good idea."

The board's future projects include installing a more versatile sound system in Chumash Auditorium, refreshing the bowling alleys and repainting the billboard tables, and investigating the possibility of adding a third floor to the building.

"How may students have the experience of running a building when they're in college?" he asked. "With a three-quarters of a million-dollar budget?"

The games area is one of the ways the University Union supplements its income. This year, the UU Board of Governors has about $350,000 to work with.

The Julian A. McPhee University Union, completed in 1971 and opened March 6 that year, provided students at Cal Poly with a central facility for campus activities. The building, which cost $4.1 million to construct, is being paid for by student fees.

The money behind University Union Week comes from a $350,000 budget controlled by the University Union board of Governors, an independent group made up mostly of students.

Ten of the 15 voting members of the board, including Chairman Joe Bowen, are students. Although Associated Students Inc. holds the lease on the building, the University Union has its own income and the board sets its own policy.

Opinion

Relocate effort

ASI Vice President Jeff Land is presently in Washington, D.C., with other representatives of the California State Students Association checking out three national student lobbying organizations.

The CSSA representatives will use their findings in deciding which national group the CSSA should belong to. Presumably, the CSSA, which itself represents the interests of the 310,000 students in the California State University and Colleges system, wants to be affiliated with the group which will best serve California students' needs.

Representation for students at the national level of government is desirable. Of course, it is not free. Any money for student lobbying at the federal level comes essentially from students' pockets. Thus, the cost of membership in a national organization, along with the expense of any conventions and travel involved with belonging, must be weighed against the benefits.

The complex workings of the federal government are, no doubt, important to the students at Cal Poly and throughout the Cal State system. For example, federal housing programs can have a direct effect on the availability of living accommodations for students in San Luis Obispo.

Other programs, such as educational revenue-sharing, can have direct consequences for students at a local level. So it would seem money spent on lobbying federal lawmakers is well spent.

But that money can be more effective at the state level. Most federal programs are administered through the state government, often in the form of complementing or matching funds. It is the state government which really determines what happens with federal money.

That means the greatest leverage can be obtained by applying student resources to the state level of government. Of course, most CSSA efforts are aimed at that level already.

That is further reason why any additional lobbying money, however small, would be of benefit to students. Only CSSA budgets should be applied at the point of greatest leverage for students—in Sacramento.

If there is already more than enough money to take care of state lobbying needs, perhaps the CSSA and Cal Poly ASI should consider establishing a local lobbying fund. Often city and county regulations can be of greater benefit or detriment to students' welfare than state or federal laws.

The motivation of CSSA representatives and of Cal Poly's ASI officers is basically sound in seeking lobbying representation for students. We only suggest that the desire to see students' needs met can best be fulfilled by continuing to concentrate efforts in areas closer to home.

Letters

Deserved reward

Editors:

Passage of Senate Bill 80-04 would be a serious mistake. The ASI has come under heavy fire lately over priority registration. Unfortunately, student senators, often more concerned with votes and popularity than policy, have begun to feel guilty about a necessity.

The simple fact is that both ASI officers and athletes must have priority registration. As unpopular as the decision will be, the Senate must take the heat and defend what is right— not what the Mustang Daily thinks is fair.

"Just what is "fair?" Athletes must block out four to five class hours per day, how can they be expected to compete for classes on the same basis as students who block out no hours?"

The members of the ASI committee began setting up the Toto concert at 8 a.m., worked straight through the Super Bowl, and didn't even clean up until 3 a.m. they even had to buy their own tickets!

Yet the ASI is accused of "laziness" and of not "deserving" any privileges. With the huge chunks of time that are devoted to the school, senators and athletes are left with little time for classes; denying them preferential registration is denying them a chance to participate.

To those who claim that academics are the only priority of a university I say discuss the matter with a businessman: very few successful business leaders will agree with you. School is a lot more than academics. A lot more.

Further more, academics are not always the most important facet of a university. I have learned more about economics, law, consumer protection, advertising, business and speech in my six years of student government than in the comparable classes at Cal Poly.

The classroom may have given me the basics, but ASI has given me the practical experience. It is in a sense a lab for everything we are taught in school.

Engineers fallible

Editors:

In response to Richard Becker's Jan. 25 pro-nuke letter I can say that it would have been wise to have him in an elementary logic class to lower the curve. For someone who claims that he "will speak exclusively in fact and logic," Becker does a shoddy job of doing so.

One doesn't have to be an energy expert to state truths concerning nuclear power. Becker claims that nuclear power, "the benefits outweigh the risks." Why? Because the National Academy of Sciences says so. That is not a valid reason.

Mr. Becker also states that "one cannot prove nuclear power is absolutely safe just as one cannot prove brushing your teeth is absolutely safe." This is only obvious and I don't disagree, but the fact is that the consequences of a serious nuclear accident are much graver than the results of a toothbrushing mishap.

I suggest that Mr. Becker evaluate his "engineers" can do no wrong. Star Trek mentality... and start thinking about becoming a responsible engineer.

Jazzing it up for UU B-day

Activities in honor of the University Union's ninth anniversary included a Monday performance by Count Basie followed by a concert Tuesday by the Jazz Band. During the concert, students were served pieces of a huge birthday cake while others looked at information from the always present interest groups.
Basic Equitation class offers horse care, riding instruction

BY KARYN HOUSTON

Riding western saddle on pack horses through the green hills behind Poly Canyon is part of the course in Animal Science 131—basic equitation.

The three-unit course is offered once each year during winter quarter to beginning horseback riders. There is space for 30 students and the class is hard to get.

It is so hard that students must sign up one month in advance. The first 30 students at the instructors’ door by Nov. 1, are enrolled in basic equitation. Taught in the course is animal science and care of pack horses through the riders. There is space for one twice-a-day responsibility.

Students sit straight up and watch their balance up the steep slope Hunt warms the riders to lean forward and take the hill gradually, stopping near and then to rest. The weather is hot and sunny this Friday afternoon, but even in the rain, basic equitation meets and rides.

My goal is to have everyone on a horse within six weeks," Hunt says. "The hills behind Cal Poly are rich with rain and fresh mud. Hunt rides at the beginning of the line, stopping now and then to comment.

"Some of you have been up in it before, so it’s tough for your horses. The animals are grazers, the way they eat is eating grass."

What seems easy on paper is impossible for John, a 20-year-old ornamental horticulture student. John’s life is a secret known only to himself and a tight circle of trusted friends. John is a closet gay — that’s the problem. John wants to come out and can’t.

That is the problem.

"I always knew there was something about me that was different," said John, who asked that his name be published. John has been a practicing homosexual since age 16 and only John’s closest friends — who are gay — know it. And many The day begins with feeding. Students share the twice-a-day responsibility seven days a week. The horses eat hay in the morning and alfalfa at nights.

Energy use down by 20 percent

BY KARYN HOUSTON

A strong effort in conserving energy by staff and students has resulted in a 20 to 25 percent reduction of energy use at Cal Poly, according to Dean Doug Gerard, facilities planning director.

"The California State University and Colleges energy reduction plan calls for a 40 percent reduction of energy use by the end of the 1980s," said Gerard. "This mandate a reduction to be completed by 1983-84. Cal Poly began energy conservation two years earlier than this and therefore, according to Gerard. Poly's energy savings will be quite substantial.

"We've done all the easy, relatively inexpensive things," said Gerard. "The remaining savings is going to be expensive."

The easy items, called "quick-fix" by the true energy cutters included changing 49,864 fluorescent tubes last summer with 36-watt tubes, equaling a 12-percent reduction for the same amount of light, said Gerard.

Electric lighting accounts for 65 to 70 percent of Cal Poly's total electric energy consumption.

Another "quick-fix" item was the installation of economizers and enthalpy controls in the University Union. Both have been installed, according to Director of Plant Operations Ed Naretto.

These intricate controls measure air temperature inside and outside of a building.

"It allows us to bring outside air in," said Naretto. "It might be 65 degrees outside and there's no need to cool air for the building. This control helps us to save energy."

Enthalpy and economizer controls have also been installed in the Administration Building. Neither building originally used outside air for cooling. Both used energy- wasting air conditioning units.

"The enthalphy controls measure heat value of air inside and outside of a building and decides which is the most economical," said Naretto.

Naretto, a Cal Poly mechanical engineering graduate who has been director of plant operations for three years before new ideas can be implemented.

New ideas include an "energy management computer," which will program heating and lighting throughout the university by one control board at a cost of $1.12 million.

"We'll also be requesting funds for a co-generating station," said Gerard. "At the moment, we generate steam and purchase gas and electricity from PG&E.

A co-generating station will allow us to save money by installing a gas turbine. It generates energy and the exhaust from it is used elsewhere.

Both have been installed, according to Gerard. An energy education program to keep lights and outside air decisions which is the most economical," said Gerard.

In the future, and "I don't think most (male) gays are." John also strongly objects to society's labeling of gays as "homosexual," "heterosexual," or "bisexual."

"He's not averse to intimate relations with a woman," nor is it true, he said, that gays go unnoticed. Emotions and feelings are often expressed in ways other than words. For example, "I like woman. They enjoy their company."

"I think that being gay is not a sickness. It's barically up to homosexuals to fight the wrong idea that being gay is a sickness," he said. "It's basically up to us homosexuals to fight the wrong idea that being gay is a sickness." The easy items, called "quick-fix" by the true energy cutters included changing 49,864 fluorescent tubes last summer with 36-watt tubes, equaling a 12-percent reduction for the same amount of light, said Gerard.

Electric lighting accounts for 65 to 70 percent of Cal Poly's total electric energy consumption.

A co-generating station will allow us to save money by installing a gas turbine. It generates energy and the exhaust from it is used elsewhere."

Saturn is included in these plans. By 1980, a co-generator will be in operation. The new ideas have been approved by all departments, said Gerard.
Center helps in decisions

BY LORI CAUDIL
Daily Staff Writer

Students who have questions concerning their career plans may find the answers at Cal Poly's Career Development Center.

"We take students through the steps of assessment, exploration, decision-making, and finally we try to help them in the implementation of that decision," said Dr. Charles Hicks, director of the center.

Hicks said the assessment stage involves finding out about the student's interests, skills, values, preferences and goals and then comparing them to those of people who work in the field the student is planning to pursue. The comparison is done through tests.

Using printed and audiovisual material at the center, students can explore a particular area in the world of work. Counselors encourage students to talk to advisors, teachers and other students in a particular major, contacting people already working in the field. The counseling process may involve taking courses in a different major according to Hicks.

At this point, students are ready to make their decisions. It may involve a change in majors, career plans or transferring to a different college.

"Now a student can clarify and rethink their decision. We then help them to implement their decision," said Dr. Hicks.

The center has provided discussion groups to help students in their decision-making process; but they have not been successful, said Hicks, probably because most students attend classes between 8 a.m. and 5 p.m., the same time the groups are offered.

Hicks said it would be best to counsel students in their freshman year, shortly after they declare their majors. However, most of the students who come to the career development center for counseling are in a "transitional stage." They tend to be sophomores and juniors approaching graduation who are unsure about their future.

For those students who consider the center helpful, they may want to engage in discussion groups to help them think about possible majors and careers they want and their objectives as far as they are concerned.

The center for students seeking guidance in choosing a career. Hicks has directed the center for 10 years.

First four months critical time for motorcyclists

More than 700 people die in California motorcycle accidents; the majority are killed within a few days of injury. Most of these deaths are caused by cellphone accidents: the majority are killed within the first four months of injury.

California is one of the states with the highest incidence of motorcycle accidents. The majority of the deaths occur in the first four months of injury. The center for statistics on the number of human lives involved in motorcycle accidents is housed in the center for research on the number of human lives involved in motorcycle accidents.

"Motorcycle Safety" is a seven-week extension course, which began Saturday Feb. 4.

The one-unit course is aimed at new and intermediate riders—those most prone to be in motorcycle accidents. The course continues until the end of the academic term.

"Generally, the first four months are the crucial period." Schroeder said of people who own motorcycles. "If they make it past the first four months, they will make it over the hump."

Schroeder, the advisory to the Poly Penguins Motorcycle Club, said that most accidents occur on city streets and intersections because car drivers are not looking out for motorcyclists.

Consequently, one of the aims of the course will be to teach riders to drive defensively.

The course continues Feb. 9 and 23 with a lecture format in room 125 of the Agricultural Engineering Building.

Parole refused Black Panther

SAN QUENTIN (AP) — Elmer "Geronimo" Pratt, who claimed his murder conviction resulted from a government frame-up because of his Black Panther Party leadership, was denied parole Tuesday by the Board of Parole Commissioners.

The Parole Board, in rendering its decision after a two-hour hearing, accepted the assessment of Pratt by Marin Deputy District Attorney Gerard R. Courtenay, who said the prisoner was "unsuitable for parole and an unreasonable threat to society."

The 32-year-old Pratt had refused to attend the hearing, telling the board in a written statement that he was a "political prisoner and therefore there is no reason for me to be here."
Draft Women? Students for it, informal survey says

BY MARY KIRWAN

The Soviet Union's threat to world peace has resurrected an issue dead and buried since 1972—the military draft.

An informal survey of 36 Cal Poly students—18 men and 18 women—the majority said women should be drafted, but not for combat. Both men and women said they would serve in the military if drafted.

If the Soviet invasion continues in other countries, most said it will be necessary to reinstate the draft.

The survey was taken after President Carter's announcement on Jan. 23 that he would ask Congress for legislation to reinstate peacetime registration of youths between ages of 18 and 26.

Fifteen of the 18 men said women should be drafted. Eleven of the women were in favor of drafting women.

Mike Miller, 19, a journalism major, said, "I feel women should be drafted. I feel if they want to murder one sex between ages of 18 and 26.

They might as well murder them all."

"The question of women being drafted is the question I haven't been able to answer. If I have to go I don't know why my sisters shouldn't have to go.

"On the other hand, I'd hate to think of women in the battlefield. It doesn't seem to fit... It's been drilled into men so long they are tough and should be able to adjust mentally, but women haven't been put in that spot to adjust there mentally."

Animal science major Jenne Spaulding, 19, said, "There is no purpose for women. Their structure just isn't made for war. Maybe housekeeping. I thing our structure just isn't masculine enough. Maybe if they needed housekeepers..."

"There is no purpose for women. Their structure just isn't made for war. Maybe housekeeping. I thing our structure just isn't masculine enough. Maybe if they needed housekeepers..."

"I am an ASI student representative said. "I feel if they want to murder one sex between ages of 18 and 26."

Julie Robinson, a 17-year-old ornamental horticulture major, said, "I would do anything possible to avoid it. Not have baby, but I'd try to worm out of it somehow."

Heather Leavens, 21, a journalism major, said, "Yes I would go. I wouldn't go if it was like Vietnam. The way the U.S. has been wronged with the hostages and with the USIS making the moves they pre. If I don't have a job outside of college, I will enlist."

Business major Alan Piercy, 20, said, "I can't be drafted because I had my knee operated on. I wouldn't go anyway because I love Mexico and there I can go surfing all the time."

Jeff Johnson, 21, a NRM major said, "I think I would enlist before I got drafted. That way I could choose the branch of the service to serve. I want to be a pilot if I had to."

Twenty-nine students said women are not physically or emotionally equal to men in a wartime situation. They should serve but should not be used in combat roles, the students said.

Fourteen of the 36 predict the situation with Russia will eventually lead to war.

Automatic Record Changer
AM/FM Tuner

This is our best value ever on an entire Pioneer music system with all these features. Comes assembled and ready to enjoy.

BSR Quanta 400
Belt Drive Turntable

Classy BSR styling, belt drive performance, and automatic return and stop all for $55. (Below original dealer cost).

Jensen R400
AM/FM Stereo Cassette

The most popular of the new Jensen line of in dash car stereos at a very special price. The R 400 has 20 watts of some of the cleanest power in any car unit and a complete one year warranty.

Jensens R-50
45 Watt per Channel Receiver

Famous Sansui performance and quality at a price anyone can afford. Features LED power level display. Includes full 2 year parts and labor warranty. Both channels driven in 8 ohms from 30 Hz to 20 KHz at 5% THD or less.

ADC Sound Shaper 1
Equalizer

This is probably the greatest improvement that you can make in your music system for $88. 5 band graphic equalizer gives you greater control and flexibility.

Toshiba X-10

Cassette Player/Recorder with Dolby

Brand new from Toshiba—it's not often a cassette deck of this quality can be offered for such a low price. This is a limited offer—so hurry in.
Jogging requires more than shoes, socks, shorts

By BEV BRINTNALL

Grab a pair of shoes, pull on some socks, put on some shorts, sweat, or a warm-up suit, and voila—a jogger.

But buying those shoes, socks, shorts, sweat, or warm-ups can be expensive in San Luis Obispo sport stores.

Shoe prices range from $19.95 for a pair of basic jogging shoes to $60 for Air Jogger.

Runners at the San Luis Obispo stores are:

1. Bello's Athletic
2. San Luis Athletic Supply
3. Outfooters
4. The Sports Section

Bello's charges $3.75 for shorts, while San Luis Athletic Supply prices cotton shorts at $3.96.

Outfooters carry Cal Sport warm-ups. The Sports Section charges $4.50.

Both stores also carry nylon rain suits. Outfooters carry Jaguar suits for $29, their least expensive suit, while San Luis Athletic Supply charges $49.95.

Consortia should be informed of what their jogging needs are and what their budget can afford.

**Orchis from page 6**

"Why do the performers choose to dance?"

"It's really exciting to get out there and do something beautiful and good. It's exhilarating feeling," said Munguia.

"It's really exciting to express the feelings I have. It's a communication tool that allows me to break through barriers," said Harper.

"This is my extra-curricular activity, this is my thing," commented Todd.

Added Lawbord, "This is one area that I know I'm good at, I can express myself. I like being on center stage."

"It helps me to express, myself and at the same time get me away from school," said Leinhoff.

"It's always fun to have fun," she said.

Moon Ja Minn Suhr has advised that Orchis for many years and considers all of them her children.

"When I work with these dancers I feel like I have a lot of fun. They are really sensitive people, just wonderful to work with," said Minn Suhr.

"Dance is not the most important aspect of school. I want them to become more rounded and wholesome individuals through the discipline of dance."
Cuban missile crisis class offered

BY VERN ARENDES
Special to the Daily

A simulation of the Cuban Missile Crisis will be one experience offered by a political science class being offered spring quarter at Cal Poly.

American Presidency (Political Science 442) centers around a simulation of three crises that occurred between Jan. 20, 1961 and Nov. 23, 1963—the presidency of John F. Kennedy—plus one imaginary issue.

The class will be taught by political science professor Carl E. Lutrin, who got the idea for the class while at a conference a few years ago.

"The crisis simulations are direct applications of concepts learned within the classroom," said Lutrin. "The simulations serve to practically teach the student about the presidency, the management of a crisis, the use of power, the role of public opinion in shaping presidential decisions and the types of interest groups that limit and enhance public power."

Each student will be selected by Lutrin to play the role of one member of Kennedy’s Cabinet. A student will be asked to do a short three-page paper concerning the nature, function, education and experience of the character being played.

The Cabinet members will be faced with four crises—two domestic and two foreign. The two domestic crises the Cabinet will have to deal with are Kennedy’s integration of schools in Alabama and Mississippi and his battle with U.S. Steel. The Cuban Missile Crisis and a made-up situation will be the two foreign policy issues.

"The class allows the student to apply the reading and it makes the textbook come alive," said Lutrin.

The only prerequisite for the class is successful completion of Political Science 201 and a desire to learn about domestic and foreign policy. Lutrin said the class also serves a social function for the students.

"The students really get to know each other in the class," he said, "because the class is not structured around one-way lectures but rather the students actively participate and work with each other."

The same class was offered last spring and 42 students enrolled. Three separate cabinets were formed.

"It was interesting to watch and compare how the three different cabinets handled the final foreign policy crisis," Lutrin said. "Each cabinet handled the crisis in a different way. The students really learned from the experience."

Lutrin stressed that students playing John Kennedy and Vice President Lyndon Johnson roles make or break the class.

"The Kennedy role is extremely important," Lutrin said. "It takes a special type of student to do the proper job."

The three-unit course will benefit the student who does poorly on written tests, since the bulk of the grade rides on the paper and the four simulations. The class will be staged on Tuesdays and Thursdays at noon.

Ali helps punch Kenya out of Olympics, seeks double KO

NAIROBI, Kenya (AP) - Mohammed Ali put some diplomatic muscle into his African tour Tuesday when he met with President Daniel Arap Moi and top members of the Kenyan government.

Despite some verbal blows earlier at the State Department, Ali — on a five-nation trip for President Carter who is support for a boycott of the Moscow Olympics — was described Tuesday by department spokesman Holding Carter as "doing a great job on his mission." Carter said, "The impact he's having is tremendous."

Between engagements, Ali took time out to visit a wild animal park near Nairobi. The former lightweight champion said he wanted to box a lion, since he had beaten all the men on Earth. "I'm out to conquer the animals and monsters. I'll be the universal champion," Ali said.

He left his car twice, chasing after antelope and zebras on foot. They became frightened and ran away. There were no lions in sight.

Ali told reporters he believed the detention of American hostages in Iran was wrong and would never have been excoriated by the Prophet Mohammed.

"I don't believe the Prophet Mohammed, if he were here, would do anything to harm the hostages," Ali said. "I don't think the Prophet Mohammed would let his followers act so violent and crazy.

"All went to the Kenya president's office and were entertained for 30 minutes of what a U.S. spokesman said were serious discussions. The president, foreign minister and attorney general were on the talks, giving Ali a welcome usually accorded only heads of state.

"I feel at home," Ali was said to have told Moi. At a picture-taking session in Nairobi, Ali happily took Moi's gold-and-ivory presidential seal and raised it in a salute. Moi was surprised but smiled.

"All savored the moment, the officials were pleased. Earlier, they had expressed doubt that they would be able to arrange the session with Moi, partly because some Kenyans felt it improper for the president to meet a boxer.

Similar feelings were voiced by Tanzanians, and President Julius Nyerere refused to see Ali in Dar es Salaam on Sunday. Kenya had said it will stay away from Moscow but Tanzania was believed likely to go to the Olympic Games.

Before meeting Moi, Ali played down his anger at Carter over U.S. contacts with South Africa. He said there was still the all the talk of State Department advisers who had failed to inform him about the issues.

State Department spokesman Carter said the success of Ali's tour had been obstructed by what he called the erroneous press reporting. Carter said the talk on the "mission as an apologist for all aspects of the policy."

"He has been saying at every opportunity which are very central to his mission and I'm surprised to see him draw the line at participating in the Olympic visits with the department spokesman said.

"Twilight of the Idols" will be discussed by an architect Eric Owen Moss as part of the Distinguished Lecture Series. Moss will talk on Thursday, Feb. 7 in the Architecture and Environmental Design Building Gallery Room 105. The free lecture will begin at 8 p.m.

He holds degrees from UCLA, UC Berkeley and Harvard University, but Moss is best known for his president designs in Playa del Rey and a warehouse located in Los Angeles.

His designs have been the subject of articles in the Los Angeles Times, Progressive Architecture magazine and the Journal of the American Institute of Architects.

Many of his designs have won awards which include the American Institute of Architecture Award Citation and a Sunset magazine Design Award for his Playa del Rey duplex. He was also honored by the Progressive Architecture magazine in 1978 and 1979.

Moss is now in private practice in Los Angeles but he makes guest lectures. The Distinguished Architect Lecture Series is sponsored by the University's architecture department.

Steel industry, workers talk

PITTSBURGH (AP) - The United Steelworkers and the steel industry, both concerned about losing more jobs to foreign competition, today opened contract negotiations for 400,000 basic steelworkers.

UAW President Lloyd McBride and J. Terence Johnson, chief negotiator for the nation's top nine steelmakers, both said they would not disclose their positions before meeting at the bargaining table.

"It's too early to speculate on the nature of the negotiations or the outcome," said Johnson. "We're president of U.S. Steel Corp., an independent producer.

The union is to present its proposals to industry today. The industry is expected to make a counter presentation on Wednesday.

Although the union has previously said it expected a substantial wage increase to assure a rise in purchasing power," McBride said they would not disclose how much will be sought by the union.

Be efficient.

Apply to 6 divisions in 1 interview.

These six Burroughs Groups have immediate openings in SOUTHERN CALIFORNIA

1 Computer Systems Group

in Santa Barbara, Mission Viejo and Pasadena designs, engineers and manufactures computer systems. They also design and produce system software for these computers.

2 Peripheral Products Group

in Westlake Village engineers and manufactures disk and tape units used with Burroughs computer systems.

3 Component Groups

in Carlsbad engineers and manufactures printed circuit boards.

4 Program Products Division

in Irvine provides support services and application development, including application software packages and application development aids.

5 Micro-Components Organization

in San Diego engineers and manufactures micro-component products.

6 Terminal Systems Group

in San Diego investigates new technology and designs the basic software and hardware underlying all Burroughs terminal products.

Burroughs' division into Groups has helped create what Fortune magazine described as our "potent reputation for technological innovation." This innovation has led to growth—and you can be part of this growth.

Burroughs revenue and earnings performance during the past few years has advanced the company to the #2 position in the industry in terms of profitability.

And our present size is only a starting point. As the second largest company in what has been predicted as the fastest-growing industry in the world—information processing—Burroughs' products span the entire field, ranging from electronic calculators to large scale computer systems.

We're looking for people with the following degrees.

EE in logic design, circuits, packaging, analog design test equipment development.

IT, ET in quality control, manufacturing control, engineering.

CS, APIS in systems software development, validation in compiler and operating systems, diagnostics, evaluation, applications software and information systems.

ME in packaging, control mechanisms, thermal analysis for mainframe and peripherals.

E in manufacturing engineering, production control and management systems.

BA, MBA in finance, cost analysis. We have fast track opportunities into management.

MIS in design, development and implementation of internal business MIS systems.

Interviews will be held on campus in the following locations:

Pittsburgh, PA - Feb. 7

If you are not able to interview with us now, but would like to at a later date, send your resume to:

M. R. Olson
Manager, Professional Employment Western Region

Burroughs Corporation

**Explosion harms Iranian oil lines**

(AP) — Explosions slightly damaged six oil pipelines in southwestern Iran's oil-rich Khuzestan province. Tehran Radio reported Tuesday it was the eighth such incident in the past few days.

The radio also reported three Iraqis were arrested Sunday on charges of subversive acts in the region. It said the Iraqis carried 10,000 rounds of ammunition, and had more in a hidden cache.

A day after formally assuming Iran's presidency, Abolhasan Bani Sadr was appointed chairman of Iran's ruling Revolutionary Council, the radio said in a broadcast monitored in London.

It said his selection was subject to approval from Iran's Supreme Court judges on the Court of Appeal if a judicial commission approves her nomination by Gov. Edmund Muskie.

The Democratic governor will get one vote on the nomination Tuesday along with the appointment of Municipal Court Commissioner Richard Herrera and the appointment of Los Angeles Superior Court. 

One student said they belonged to the Secondary Students' Revolutionary Movement, one of about a dozen leftist groups operating in El Salvador.

Unlike some, the group seldom resorted to violence.

The students said they would stay until tuition at private schools was lowered 40 percent.

enrollment at the country's five public universities was permitted to expand and certain ministry officials were fired.

**Governor proposes lady judge**

**SACRAMENTO (AP) —** Fresno Superior Court Judge Pauline Hanson would become the fourth woman on the state Court of Appeal if a judicial commission approves her nomination by Gov. Edmund G. Brown Jr.

**Savings offered to homeowners**

**SAN FRANCISCO (AP) —** Builders and buyers of new homes will get one incentive if their dwellings make good use of energy-saving equipment under rules adopted by the California Public Utilities Commission.

The PUC said Tuesday those who do not adopt the "extra" for energy conservation will not get the incentive for newly built homes.

The PUC said many offer rebates or incentives for using certain energy-saving equipment, such as setback thermostats, energy-efficient appliances, solar-assisted space and water heating, and fluorocarbon lighting.

The allowances also will be given for fluorescent lighting, microwave ovens, individual wall-mounted thermostats, fireplaces with best heat losses, insulation above code minimums and passive solar designs.

Each of these energy savers will be assigned a certain number of points, which will be converted by formula into dollars.

The PUC said the energy savings in an average new dwelling under the program would result in total annual savings of 118 barrels or $41 in gas, and 3,760 kilowatt hours or $186 of electricity, for a total of $229.

One of the 40-year life of a dwelling the total energy savings is projected to be $1,200 in gas and $6,400 in electricity.
BY TOM JOHNSON
Daily Mustang Writer

One might not be able to recognize Coach Berdy Harr's squad without a scorecard, but the 1980 Mustang football team will be a force to be reckoned with this season.

When Cal Poly takes the field against Long Beach in a practice game this weekend, they will sport a radically different lineup than that of last year. Only nine players remain from last year's club, a fact which leaves coach Harr more than a little concerned.

"Our major weakness is experience. We have a lot of new faces and we haven't played together much," said Harr.

Harr added that the team possesses a lot of character which may make up for the lack of experience.

"We have good people. They are guys who want to be good players. They are a resilient bunch; they respond well to coaching and challenges," said Harr.

Harr is banking on this year's crop of rookies to take up the slack left from the 14 departing players. A key piece in Mustang's jigsaw puzzle will be centerfielder Dave Kirby, who was a second round draft choice for the Detroit Tigers.

Harr believes Kirby has the potential to be the best centerfielder the school has ever had.

Infielder Bill White and first baseman Dennis Ferdig should also prove to be important cogs in the Mustang machinery.

White was a .400 hitter at Yuba City Junior College while Ferdig, also a .400 hitter, was an all-state honorable mention at San Diego JC.

In addition to the rookies, coach Harr still has a nucleus of returning players to form the foundation of the team. Craig Gerber, second baseman, heads the list of veterans. Gerber, who was first team all-CAA last year, will be counted on again to plug up the middle at second base.

Sophomores Stu Heint and Todd Jenson return to the Cal Poly mound to form one-half of Harr's starting pitcher's corps.

Harr was the team's top pitcher last year with a 9-3 record, a figure which earned him second team all-league honors. Jensen, who compiled a 4-1 record last season, will play a large part in coach Harr's plans.

Catcher Rafe Chronschall and left fielder Bobby Parr, who hit a .390 clip last year, will also play prominent roles this season. Harr characterized his squad as a team to beat in the CCAA; they finished with a .500 record last year. Consequently, Harr spoke with caution when assessing this season's Mustang team but his enthusiasm still shone through.

"This club doesn't have as many potential professional ball players as last year's. However, it can be a good club. I feel very comfortable about the way players brought in to replace those who left."

Harr explained that last year's team burned out quickly because of scheduling problems and because the first league game came on the heels of finals, so that the Mustangs were cold going into their league slate.

This year the league schedule is more balanced so that the Mustangs will not have to play four-game series or travel for 16 straight games on the road. Like the last year the team will only have practice games after winter finals so that they will be ready for the league season.

Harr noted that while most years the CCAA is dominated by two or three schools, there may be a sixth team that might contend for the crown this year.

Los Angeles Northridge, Pomona or Yuba City might be a dark horse to the teams that traditionally have dominated the league. But Harr noted that many returners.

Harr said there is a chance that the Mustangs will be favored in the league because the first league game is away.

"The Mustangs might fit in the top four schools," Harr commented, "if this club reaches its potential, it will have a much better record than last year's."

Harr explained that last year's team burned out quickly because of scheduling problems and because the first league game came on the heels of finals, so that the Mustangs were cold going into their league slate.

This year the league schedule is more balanced so that the Mustangs will not have to play four-game series or travel for 16 straight games on the road. Like the last year the team will only have practice games after winter finals so that they will be ready for the league season.

The Mustangs will face the Stanford Cardinal in the league opener Friday evening at 7:00 p.m. at Stanford Stadium.

The Mustangs enter the league as a team to be reckoned with, according to Harr, who commented, "This club doesn't have as many potential professional ball players as last year's. However, it can be a good club. I feel very comfortable about the way players brought in to replace those who left."

"The Mustangs might fit in the top four schools," Harr commented, "if this club reaches its potential, it will have a much better record than last year's."

The Mustangs will take to the diamond this Friday afternoon against Stan­ford. Game-time will be at 12:00 noon at SLO Stadium. Poly will face Stanford again on Saturday at 12:00 noon.

Repubican

SACRAMENTO (AP) - Republican registration in California dropped to 33.5 percent this month, the GOP's lowest percentage in this century. Democratic registrations also dipped slightly, from 54.9 percent last fall to 54.6 percent this month.

But the Democratic figures showed no significant increase since they have fluctuated between 54 percent and 55 percent for four decades, while the GOP share of California's registered voters has declined steadily, from 43.7 percent in 1970 to 33.8 percent in the first registration report of 1980.

Election officials cite several reasons for the GOP decline, including the 18-year-old vote and increased registration among minorities, a group in which Republicans are traditionally weaker.

California's minor parties all gained in the January report, including Libertarians, who qualified for the first time as a recognized party with state-conducted primaries. The declined-to-state category of voters also increased slightly.

Overall, California's voter rolls increased from 10,006,957 last November to 10,121,907 this month.

The highest total of registered voters ever on California rolls was 10,446,215 for the 1972 presidential election.

February 11
Young Mustangs come home from tournament

The volleyball team is shown here battling it out during an intersquad scrimmage. The Mustangs won't return home until Feb. 27 when they will be pitted against UC Santa Barbara.

Mustang Corral

Vaghsa Hitchcock's wrestlers escaped from the University of Oregon with a narrow victory and went on to sweep two matches the next day.

Cal Poly was able to edge No. 18 Mustangs 9-8, 9-8. Mustangs heavyweight David Jackson won his match to preserve the win with an 11-6 decision over Duck Dan Cook.

The matmen went on to roll over Portland State with five pins and a score of 46-3. The University of Washington proved to be another romp in a 36-7 victory.

Another romp in a 36-7 win over Portland State proved to be another romp in a 36-7 victory.

Iowa State on Feb. 23 at Washington proved to be another romp in a 36-7 victory.

"Iowa State on Feb. 23 at Washington proved to be another romp in a 36-7 victory."

Pat Smith left the game with 9:29 left and Kirk Gilkey scored 4 points with 15:29 left in the game.

YOUR MOST IMPORTANT DECISION . . .

Once upon a time, there were too many engineering students, and too few opportunities. Today that has changed. You have a commanding position in the job marketplace.

BE SELECTIVE. The Astronics Division of Lear Siegler is select. In addition to career mobility, we offer you the opportunity to work with seasoned engineering professionals.

JOIN A LEADER. Our division is a leader in the development and production of flight control systems and artillery fire control systems. Challenges are plentiful. We're large enough to offer you a generous benefit package, attractive facilities and career advancement. Small enough to provide high visibility and hands-on assignments. Progressive enough to stay flexible and recognize innovation.

We have ground floor opportunities in the following disciplines:

- Systems Engineering
- Circuit Design
- Software
- Analysis
- Reliability
- Components
- Test Support
- Manufacturing Processing
- Test Equipment Design
- Quality Assurance

If you haven't chosen your career path, we offer a one-year Rotation Program allowing participants to choose four different job assignments.

Our employees enjoy outstanding benefits: medical, dental, vision care, and life insurance programs, salary continuation plan, paid holidays and vacations, savings and pension plans, stock purchase plan and more.

STAY AHEAD OF YOUR PEERS AND MAKE THE RIGHT DECISION! The first step is getting to know us.

Our representative will be on campus February 28th & 29th. Please contact your College Placement Office to set up an interview or you may call Judy Skinner in our Personnel Department at (213) 391-7211.
