Graduate student tuition bill fails

BY CYNTHIA BARAKATT
Staff Writer

A proposal to charge graduate students tuition at state institutions was defeated by an assembly subcommittee Monday.

The proposal sought to offset state funding shortages by charging graduate students of the University of California and at the California State University and Colleges system tuition beginning in Fall 1982.

Tuition levels would have reached $496 per year for U.C. graduate students and $531 for graduate students at CSUC over five years.

The defeat of a similar proposal by a senate subcommittee earlier this year kills the issue of graduate tuition for the year, the Los Angeles Times reported Tuesday.

Assemblyman Gary Hart (D-Santa Barbara), chair of the Senate Finance Sub-Committee Number 1, chaired the hearing and said that he was unable to reach a member of the Assembly Ways and Means Sub-Committee Number 2 that defeated the proposal.

Hart could not be reached for comment Wednesday.

A similar graduate tuition proposal was defeated by the Senate Finance Subcommittee Number 1, chaired by Senator Walter Stiers (D-Bakersfield) in the senate earlier this year.

The California State Students' Association is "extremely pleased" with the defeat of the proposal, said CSSA legislative advocate Donna Browney.

Effective lobbying by the CSSA plus the huge number of postcards from individual students opposing the graduate tuition were instrumental in bringing about the defeat, said Browney.

"It was clear even before the vote in the subcommittee that we had been successful in presenting our position against graduate tuition, Browney said.

The legislative advocate said she expects the graduate tuition issue to arise again next year to try to prevent the state from easing its economic problems, and the CSSA will continue to fight the proposal.

Cal Poly financial aid director Larry Wolf said the graduate tuition proposal was never a serious threat to the university and students.

"There are not "that many" graduates on financial aid, said, and graduates only may receive aid in the forms of loans or work study.

But, if undergraduate tuition were imposed; it would "certainly have a major impact on financial aid availability," at Cal Poly, Wolf said.

Dialo emergency plan examined at hearing

The initial spectacle of public interest in the low-power test licensing hearings for Diablo Canyon was hardly evident, by Wednesday morning as the hearing continued at the Veterans Memorial Building before a small and subdued audience.

A remnant of protest signs papered the walls inside the hall, including one that said, "Deny this license as easily as you deny our First Amendment.,... but interest waned as soon as the technical, tedious lines of questioning began.

The hearings focus on determining the safety of Diablo's coolant valves, similar to those that failed at Three Mile Island and on the adequacy of the emergency evacuation plan submitted by Pacific Gas and Electric Co.

Jerry Dana of Walter Brothers Construction Co. was contracted by Cal Poly to dam the substance to enter the stream.

The Walter Brothers Construction Co. was contracted by Cal Poly to remove an oil based substance found in the stream last Saturday evening.

According to Ed Naretto, director of plant operations, the substance spilled into the stream was heptane—a hydrocarbon—used as a cleaning solvent. Naretto said the chemical entered the stream in the area of the Rose Float lab.

He said the cleanup effort originally involved a removal of just the surface water—where the chemical was floating. But, Naretto said, when it was found that the substance was on some of the woods near the stream,

they resorted to "spray washing.

This consists of one group of workers moving downstream from where the spill occurred with a powerful water hose, spraying the chemical loose. The stream has been dammed about a half mile down and there another crew used a pump to vacuum the water from the stream and into a truck.

The cleanup was expected to be completed by Wednesday.

Public Affairs Director Don McLeod said the substance was first noticed by a jogger at about 7:30 p.m. on Saturday. He said the stream was dammed within two hours.

He said it is not known who allowed the substance to enter the stream.

All that is known, according to McLeod,

Council votes to nix itself, form representative body

BY KIM BOGARD
Staff Writer

The Cal Poly academic council has unanimously passed a motion recommending its own dissolution and the creation of a council giving school deans a greater chance to air their views on issues.

The recommendation will be sent to Cal Poly President Warren Barker.

The recommendation, passed Monday, was a result of the council's opinion that the voice of the academic council is not a true reflection of the academic deans' opinion, said Norma Henderson, administrative assistant to the vice president for academic affairs.

The voting membership of the council as it stands is a mix of school deans and representatives of the academic and student senates and the instructional department heads council.

Henderson said that since there are only seven deans and three council representatives, the vote of the council is not always consistent with the opinion of the deans.

The purpose of the academic council, said Henderson, is to make recommendations to the university president. The various university councils and senates also serve this same purpose, she said.

The opinions of the representatives on the academic council, therefore, are also heard in the recommendations made by their specific committees.

The new council that would be created would consist of the school deans and vice president for academic affairs Hazel Jones. The vice president would serve as chair and will only have a tie-breaking vote, said Henderson. A council of school deans such as this would give the President an undiluted expression of the dean's views on the issues.

Since committee members would no longer sit on the council, a means of communication between the Academic Council and other segments of the university would need to be determined.

The Committee on Committees serves the purpose of periodically reviewing university councils, said Henderson. It will continue to meet, said Henderson, and its input will be heard before any final vote is made.

Along with the recommendation, the council requested that the change take place just after graduation in June. The new council will name itself at the first meeting and it will be called the dean's council until it is officially named.
LA hospital inquiry expanded

LOS ANGELES (AP) — Authorities said Wednesday they were examining suspicious deaths of some patients at Centinela Hospital in Inglewood, expanding an investigation of hospital deaths that now spread over three Southern California counties.

"At this time the coroner's office has been presented with less than 10 cases from Centinela Hospital. The district attorney has indicated there will be more," said Assistant Los Angeles County Coroner Richard McCaleb, D-Mass, who is looking into the Reagan administration decision.

Creek cleaned up

Please see page 6

Caleb, 6  Caleb, is that the chemical went into the stream in an area where different types of equipment are cleaned. McCaleb said the U.S. Coast Guard issued a "notice of suspected discharge" to Cal Poly which informs the university of its responsibility to remove the substance. According to McCaleb the amount of the substance which entered the stream was "very light."

Marvin Whalls, a natural resources management instructor, said the potential damage to the stream would depend on the "volume and concentration which entered the stream."

"In most cases where the spill is light...more damage can be done with clean up procedures than letting the natural dissipation of the chemical occur."

Correction

SAN FRANCISCO (AP) — The U.S. government was not liable for the death of an elderly man who died shortly after the Army conducted a germ warfare test off San Francisco in 1950, a federal judge ruled Tuesday.

U.S. District Judge Samuel Conti ruled against the family of Edward Nevin and said the government was not negligent in Nevin's death or in conducting the germ warfare tests. Nevin died of heart muscle inflammation, which his relatives claimed was caused by a bacteria released from a government vessel during the tests.

Conti said the government proved through its evidence in a lengthy trial that it was not negligent in conducting the San Francisco tests. He said the test was not the actual or proximate cause of death for the 75-year-old Nevin, a prominent San Francisco banker.

Conti ruled the United States was immune from damages and that the judgment made by the Army in selecting the bacteria to be used to determine urban vulnerability to a biological warfare attack was made at the proper level and care. The Nevin family had sued for $1 million damages, but in closing arguments a grandson, plaintiffs attorney Edward Nevin III, trimmed to the amount of $300,000.

Architects attack trends
Buildings need to project distinct image

BY NANCY LEWIS
Staff Writer

The image or personality is a vital part of any building, according to architect Mark Trieb. It is as important as the foundation.

Trieb spoke to a packed room Tuesday evening in the gallery of the Architecture and Environmental Design Building, in front of new blue moon poster that was the latest in the Distinguished Architects Series.

"To many people, it's the image of the building they see primarily," said Trieb in his speech entitled "Image Is Function." And "Don't just put your life statement into the building, but it should be part of the university's identity," he added.

Trieb, a member of the UC Berkeley faculty since 1968, has achieved recognition as a specialist in architecture, architectural history, and the Japanese Gardens of Kyoto.

Regional design conformity stressed

BY SHAWN TURNER
Staff Writer

Architecture is taking a step backwards, declared Robert Marquis, principal of Cal Poly's Robert E. Kennedy Library — and he thinks it's a good thing.

Robert Marquis gave Monday a talk on architecture to students and faculty members Thursday in his idea of what the future of architecture should be. Virtually all his designs in the Kennedy Library.

His presentation was part of the university's Distinguished Architects Series.

The 53-year-old architect states that his firm, which has more than 100 architecture students and faculty members Thursday, will continue to pursue designs that are part of the university's identity.

"Design should be in context," he said. "Architecture is going to return to a regional vernacular, back to fit in to the society."

Marquis, who has been designing buildings in the San Francisco area since 1956, said, "I think we have always worked in context, even back then. I don't think that we were aware of the urban context and how it relates to other buildings, though."

By urban context Marquis meant the use of streets and circulation systems for the integration of buildings, as well as the adaptation of the new building to fit the architectural styles of surrounding structures.

Marquis showed examples of his use of urban context in his latest projects, which include the U.S. Embassy in Costa Rica, the State Department of Justice Building in Sacramento and the posh St. Francis Yacht Club in San Francisco.

"When I finished designing the yacht club they gave me a jacket," said Markquis, wearing a loose-fitting blue blazer with a club patch on the breast pocket. "But then I had to pay for a membership and that took care of the problem."

Many of his designs include the use of urban streets and walkways, easy access to other buildings in the park, or town squares and smaller parks and gardens for each portion of the project.

Marquis also likes to incorporate artwork into his designs, especially stained glass. But he warned the students, "If you ever use a specific name for the artwork in your design, Call it "art" or simply "light fixtures," otherwise your client will say it's too expensive and take it out."

Although there is no art work yet in the Kennedy Library, Marquis said the San Francisco firm he designed had used urban elements in the design. "The stairs were designed so that most of the students' needs are on the lower floor and they wouldn't have to climb to stairs all the time."

Answering a criticism that the stairs may be too steep, Marquis said, "I think they're just psychologically too steep. Once we get some colorful banners to shade the windows next to the staircase you won't get that shock."

He said students are supposed to use the stairs most of the time, which is why the university has the elevators in the back of the building.

"I have to admit, though, that when I looked at the building with my wife this week, we took the elevator up and walked down," Marquis said.
Imagination took over for reality in 'Story Theatre'

BY LORI ANDERSON

Once upon a time there was imagination. Add to that a little ingenuity and what you have is 'Story Theatre.' The Cal Poly production of Paul Sills' two-act collection of tales from Aesop and the Brothers Grimm last weekend, provided a delightfully comical evening of entertainment. 'Story Theatre' charmed young and old alike. Director Michael Mallin and his cast played upon a limited stage and used some very minor props to achieve a charming result. The job of each actor was to provoke the audience into filling the void of the undorned stage and the absence of characteristic costumes.

The brightly-colored tights and leotards, which composed almost the entire wardrobe of the cast, were not at all times flattering. Yet, imagination was meant to take over where reality left off. The success of the production was due to a couple of personal characteristics to be developed in 'Story Theatre,' it so happened that some actors succeeded in this task and some did not.

Once upon a time there was imagination. Add to that a little ingenuity and what you have is 'Story Theatre.'

Bradley Shayne Bessey was most successful in the role of the regal Master Thief. Although he was effective in all his characters, Bessey played this one with an authority due a chief of such talent and quality. The Master Thief stole a horse out from under three talents and quality. 'The Master Thief. Once upon a time there was imagination. Add to that a little ingenuity and what you have is 'Story Theatre.'

Jennifer VanRyn and Don Potter playing chicken in the Cal Poly Theatre production 'Story Theatre.'

bessey's expertise and his character's ignorance he created a humorous scene that appealed to the audience. Jennifer Van Ryn, who played opposite Bessey as the Farmer's Wife, was a much less effective character. Van Ryn was overly eccentric in her hysteries. Her voice cracked at all the wrong moments. Van Ryn had difficulty in this role, and throughout the performance, in achieving the appropriate emotion and action that would relay her character.

As a Betrothed Maiden, Van Ryn was too cold; as the Farmer's Wife she was too hot; but as Henny Penny, she was just right. As a chicken, Van Ryn could check with her uneven voice and flap her 'wings' and provide just the right touch for a Henny Penny. The tale of Henny Penny was perhaps the most 'entertaining' of all 'Story Theatre.' Five unhatched hens paraded the stage, prancing and dancing. Ducky Daddies, played by James Walker, was no John Travolta, but he could still be called a 'disco duck.'

Three other characters rounded out the story. Groovy Pansey, played by Tara Karina, Cocky Locky played by Bessey, and Turkey Lurkey, portrayed by Don Potter, paraded about the stage and over tabletop mountains, on their way to see the King, while all the time keeping in tune with the beat of 'Another One Bites the Dust.' Don Potter, in his role as Turkey Lurkey, was ideal. He talked turkey. He even 'gobbled.' Henny Penny was the most accurately cast of all the tales. It is amazing how much resemblance people can have to animals when they put characters to the perception of the individual.

mance was another disturbing feature. When not "off stage" the cast paid along the stage's platform edge and watch the performances. Often, they were distracting, not allowing one to focus attention on the real story taking place.

'Story Theatre' left much of the creation of the character to the perception of the individual.

Also questionable was the use of sound effects and lighting. Why were special effects added to some stories and not to others? In the story, "Is He Fat?" a sound to replicate cracking walnuts was amplified for the audience. It did not sound like cracking walnuts at all, but rather like breaking twigs. The final result was very ineffective.

In the story, "The Fisherman and His Wife," lightning illuminated the backstage during a storm. Therefore other storms in "Story Theatre" and lightning was not used for them. It was an unexpected effect that could have been more effective if it had been more equally distributed about the entire play.

Paul Luhn, in his role as the Fisherman, made a commendable performance. He battled the forces of weather and the greenfingers of his wife and still managed to maintain his composure.

Caroline Jordon portrayed a beautiful countess and princess, but made no lasting impressions one way or another. Steven Zunich was effective in all his roles, from that of the psychotic Rubber Bridgeman to that of Foxxy Waxy, the charming and sly canine.

All in all, the cast of 'Story Theatre' generated some very strong and effective characters, leaving their realization to the audience. The task appeared to be not too large for the Thursday night audience and as in all of the fairy tales, the story ended "happily ever after."
Defected Russian musicians to give historic performance at Poly

BY VICKI WIGGINTON

The cloak-and-dagger defection of two Russian musicians last month has resulted in a historic concert to be held in the Cal Poly Theater Aug. 2.

Maxim Shostakovich, a 42-year-old conductor and his son Dmitri, 19, a pianist, will perform with famed cellist Mstislav Rostropovich, as an expression of thanks to America for granting them asylum. The Shostakoviches defected while on tour in West Germany. They told a policeman backstage at a concert that they wanted to defect, and were taken to a private residence, which was eventually protected by American security, said Swanson. After arriving in the United States, the musicians met with the Russian consulate and officially renounced their Russian citizenship, asking for permanent asylum in the United States, the musicians met with the Russian consulate and officially renounced their Russian citizenship, asking for permanent asylum in the United States.

The Shostakoviches came to the United States with the assistance of William P. Clark of Shandon, who is assistant to General Alexander Haig in the State Department. Clark is also a supporter of the Mozart Festival, said Swanson, and that is how the suggestion came about.

"Mr. Rostropovich asked if there was some way they could reciprocate or do something nice for America for granting asylum to the Shostakoviches," said Swanson, and it was suggested (by Clark) that perhaps they might do a fund-raiser for the Mozart Festival, which they said they would be delighted to do," said Swanson. "It's with a sense of great happiness that they are coming to our community," said Swanson. "It should be a tremendous concert; something that the Central Coast has never seen before, at a level which we have never been able to participate," he said. "Rostropovich is a phenomenal cellist," said Swanson. "That's been known for many many years. Shostakovich, I think, was one of the leading conductors in Russia."

The Cal Poly theater was chosen as the "only suitable hall" in the area, said Swanson. "It's a big problem not only in terms of accommodating everybody that would like to hear this and see it, but as a fund-raiser it's a big frustration because it's going to cost us a lot to put it on."

"I just can't convince some people that in the gym it would be terrible," he said. He said the concert, which will be covered by national media, would be reviewed solely on the basis of its "horrible" location if held anywhere but the Cal Poly Theater.

"With an event like this, there's no way I can compromise the quality of the performance by placing it in the gym," he said.

Swanson has so far had no direct communication with the Shostakoviches or Rostropovich, but is confident they will be happy with the Mozart Festival and its orchestra.

"I think when Rostropovich gets here he's going to be astonished," said Swanson. "In fact, I guarantee it. He's going to be totally happy."

Swanson said he has no doubts the chamber orchestra will be up to the standards Rostropovich and the Shostakoviches are used to. He said the Mozart Festival musicians are all prominent musicians from Los Angeles and San Francisco. There will also be five local musicians playing. "This is the high point of the year for them," he added.

Swanson said his chances of playing with the orchestra are "very good, since I make those decisions."

Swanson said an interesting part of the concert will be the performance of a piece composed by the deceased Dmitri Shostakovich, the father of Maxim, for his son when Maxim was 19. Now Maxim will direct his son, the composer's grandfather and namesake, in the piano concerto.

BOARD HEARS DEPOSIT DISPUTES

BY NANCY LEWIS

The San Luis Obispo Human Relations Commission knows the definition of coven.
Of the most frequent complaints filed with the HRC is the cleaning-deposit dispute between tenants and their landlords, said Emlyn Jones, mediator for the Landlord-Tenant Inspection Service, a part of HRC.

"We are here to provide an objective third party opinion on a rental unit's condition," he said. The service averages about 50 to 60 inspections a month. The tenant-landlord dispute is "a huge problem," said Jones, "because hundreds of people are being ripped off of deposits.

Two problems consistently arise, he said. The first problem occurs when the landlord agrees to pay back the deposit, leaves the rental unit, and later calls on the phone to refuse to pay it back because "the place was left dirty." The second problem comes up when the landlord justifiably holds back the deposit because the apartment is dirty and the tenant takes him to small claims court.

Many people think the tenant is always right in these disputes but they don't realize that landlords can be harassed by tenants just as much. That is why Jones urges landlords, as well as tenants, to use this inspection service.

The 6-month-old inspection service offers assurance against the unpleasantness and expense of a nasty dispute between the tenant and landlord, said Jones.

It has been fairly successful so far, but Jones believes there is a great need to reach Cal Poly students, because they make up most of the tenant population in San Luis Obispo. Inspectors will assist any tenant even if he is not a student.

Whoever requests the inspection service pays a $25 fee, and if the rental unit is found to be dirty, the cost is added.

The inspector will look at the rental unit when the tenant moves out. He writes down what he finds and gives copies to both parties. According to Jones, if the inspector can't settle the dispute, it goes to small claims court and the inspector can be called upon to testify.

The inspector's opinion is not legally binding on either party, said Jones. Problems arise when the LTIS is called in for inspection after the tenant has moved out and remodeling has been done on the rental unit. The only option we have left open then is to send copies to small claims court," said Jones.

It's essential to call before the rental unit is vacated, and to call several days before an inspection to make sure an inspector is available on moving day.

The inspection service takes normal wear and tear into consideration, unlike the practice of landlords, said Jones.

Jones realizes, after doing inspections, that many students who are tenants don't know how to clean.

They have no training on how to prepare an apartment to get their deposit back," he said. "It's not major cleaning either but a lot of little things to clean.

He does give credit to the tenants, saying that most of them make an obvious effort to make the apartment ready for occupancy.

Inspection appointments can be made by calling 544-3050.

If you're interested in seeing what we have left open to the tenant in a way that's been left open, we have a variety of services and bank in all over the country.

The phone number is 544-3050.

The hearings are scheduled to continue this morning at 9 in the Veta Hall.

How to avoid pulling an all-nighter over your checkbook.

With Bank of America, you won't have to stay up nights worrying about your checking account. We offer several checking plans and a variety of banking services that make checking easier.

Check into our checking plans.

Perfect Checking™ is economical if you only write a few checks a month. With the Option Plan™ the higher your balance, the less you pay in service charges. And with InitialLine™ Checking™ if you qualify, you get a line of credit with your checking account. And a way to qualify faster for a BankAmericard® Visa® credit card.

Study our services.

Our Money Convenience System—includes: Monthly Timesaver Statements—an easy way to help balance your checkbook. Money Transfer Service—great if you're getting money from home. Extended banking hours at either of our branches. Free Consumer Information Reports—on everything from checking accounts to ways to finance your college education.

Rest easy.

We have people ready to help with your banking needs. Come on over—Find out more about checking or any other banking problem that's been keeping you up late.

*If you're a full-time student of sophomore standing or higher attending college in California, you may qualify for InitialLine Checking. Freshmen may qualify in some cases. See us for details.

INTEREST WANCES AT DIABLO HEARINGS

From page 1

LaRher asked what effect an earthquake would have on these stations but the NRC panel objected to this saying it was "irrelevant" to this hearing. LaRher then asked, "What effect would an earthquake greater than the one which occurred in the plant and its systems?"

That question was said to be irrelevant to the hearings. "Seismic hearings were held last fall. It's an issue that this hearing cannot decide," said NRC inspector John Norton.

LaRher then pointed out an affidavit from Gov. Brown to PGP which said in part: "There are approximately 5,000 visitors to Montaño de Oro State Beach, and there are presently resident living in the Low Population Zone immediately surrounding Diablo. Also in the LPS are quite a few agricultural workers, said LaRher.

The panel replied that it would be "relatively simple to evacuate these people but claimed that "none of us are experts in evacuations."

LaRher then questioned the ambulance service and from Diablo. "There is access from the north of Diablo," said a PG&E representative, "but there is no specific plans or procedures.

The representative also said that a sirens system has not been installed yet, nor has PG&E's public information program been instituted, "because of the timing involved and delays."

PG&E has conducted fire fighting tests off-site and has three fire brigades on the property consisting of five people each, he said. Test emergency drills for radiation leaks have not been conducted under the recommendations made by the NRC after the TMI accident, he said, but are to start in July.

The hearings are scheduled to continue this morning at 9 in the Veta Hall.

Trees may be fuel for future, foresters believe

BY BOSENN WENTZ
Outdoors Editor

A tree considered "worthless by most local residents may be a future alternative to natural gas. The local eucalyptus blugum eucalyptus is currently being studied by Natural Resources Management professors Walter Mark and Norman Pillsbury as a possible source of biomass conversion to fuel. Several species of eucalyptus and poplar are being tested as they are grown in the area, determining how much woody biomass or weight they produce. This test will show what species are best for fuel purposes.

In addition, the trees are being culturally treated so the researchers can learn to effectively utilize wood control, how much space is needed for ideal growth, what soil types are best, whether the trees respond to fertilizer, and how much water they will require.

The information sought by Mark and Pillsbury has not been previously researched, Mark said, and therefore a long term feasibility study was needed to determine what species would be economically practical to use for "energy plantations."

Ultimately the foresters hope to find a species of tree conducive to use in a "commercial scale biomass silvicultural energy plantation," according to Mark. Small companies would be able to utilize the trees to produce a large amount of heat, possibly even an excess which could be sold back to the local utility company. A business in Dinuba, California plans to use biomass conversion for the huge amount of wood needed to dry fruit by their company, Mark said.

Originally the project was funded by a grant from the California Department of Forestry. The money is gone now though, Mark said, and the research has slowed considerably due to lack of money.

"We had four full-time and two part-time workers before the money ran out," said Bud Laurent, a marine biologist in charge of marine resources at the Morro Bay marine research lab.

There are approximately 1800-2000 otters along the coast of California now. The main herd on the Central Coast is found off Pismo Beach, where they are foraging on the clams. "There has been talk of expanding the range artificially to the Channel Islands near Santa Barbara, but abalone divers have strongly objected because this is their last untouched habitat," stated Laurent.

The central coast became a natural habitat for abalone and clams after the Dutch arrived in the late 1800's killed most of the sea otters in the area for their valuable pelts.

"The sea otter and man are the only natural predators of abalone and clams, so when the otters were diminished in number, the abalone and clams prospered," said Mark. "A natural fishery developed along the coast, but the sea otters became an endangered species," he continued.

"The otter remains on the threatened list mainly because of the danger of a potential oil spill that could wipe out much of their population," said Mark.

NRMP professor Walter Mark talks about the rapid growth of Camaldulensis, a species of eucalyptus being used in the biomass research project. The trees can obtain as much as a four-and-a-half inch trunk diameter in one year.

Traveling is the experience you don't expect—surprise—that's what I'm about to tell you.

That was the opinion of Dave Marshall, a 27-year-old from Britain and a veteran traveler of both the United States and Europe. Via hitchhiking and Greyhound bus, Marshall traversed the United States, chatting up a host of experiences he is not likely to forget.

Marshall was given a tour of New Orleans by a "dope dealer." While visiting Houston, he met with "a bunch of cowboys" and rode the "bull" used in the movie Urban Cowboy. He was appalled by the poverty of many Cubans and Mexicans in Miami—who, Marshall said, lived "in absolute squatter in shanty towns."

In St. Augustine, Fla., "religious people" sought to make him a traveling preacher. "Going through Florida," Marshall hitchhiking south from the San Francisco area, Marshall stayed with Russian immigrants who were chatting up their native language to U.S. Army personnel in Monterey.

How did he come across Cal Poly?

"I stuck out my thumb," Marshall said.

While hitchhiking south from Santa Cruz, Marshall was picked up by an agribusiness student at Cal Poly.

Dave Moore, who gave the British traveler a lift to the Monterey area, the student told Marshall to look him up when Marshall reached San Luis Obispo.

"He was so friendly and now I know what I'm about to do," Marshall said.

Marshall is scheduled to speak on the topic "How to Travel Cheaply in Europe and Britain," today at 11 a.m. in Science North, Room 202. He will also speak tonight at 8:30 p.m. in the Sequoia Hall main lounge. The talks are being organized by the Cal Poly Travel Center.

"The purpose is to give out points not in many travel guides," he said.

Marshall graduated with an economics degree from Britain's Durham University. "Traveling is the experience you don't expect," he added. "I never taught in England, taking exams and working for an additional five years," he said.

"If I ever pass the exams, I thought, I'm going to have a good time." Then Marshall decided to take an "extended vacation" in the United States.

Marshall's vacation plans led him through an Odyssey of seedy hotels and youth hostels throughout the southern half of the United States. He found Americans "incredibly friendly" to the English—especially Texans.

"America is a hustling country," he contended.

Americans, he said, were very money-oriented and competitive, while in England there is a "more mellow lifestyle."

Speaking philosophically, Marshall explained, "In England the game is played for enjoyment of the game. In America it is played to win." The English traveler said there were two aspects to traveling: meeting people and seeing the countryside. In two countries, Marshall has seen both.

He indicated that those traveling in France would do well to have a Canadian flag on their backpack. The French Americans were "incredibly friendly" to the French Canadian, he explained, and are thus more likely to pick up a hitchhiker. Marshall said if his finances hold out, he may attempt to travel to China.

"That would be a real adventure," he said.
Two track standouts selected to compete in Isreal in summer

A Cal Poly vaulter and a mile have been selected to compete on the U.S. track team to compete in the 1981 Maccabiah Games in May 26-30 in Macom, Israel.

Paul Madvin. . .

The NCAA Division II National Championship meet will be held on May 26-30 in Macom, Ill. Kibort won the conference vaulting title by clearing 16'1 and Kibort was awarded the fourth in the 1,500 meters in 4:58.56.

Eleven vaulter Mark Kibort and 1,500-meter runner Paul Medvin were selected earlier in the week to take part in the Israeli-based track meet.

The duo helped the Cal Poly track team to another California Collegiate Athletic Association conference championship last week and are preparing for the owners make proposal to break talk stalemate

NEW YORK (AP) — With the player's strike deadline lurking May 29, the baseball owners made a new proposal in an effort to break the logjam over the only remaining issue: free-agent compensation.

Dan Quisenberry, player representative for the Kansas City Royals, called the new offer "semi-different. Essentially, it's the same proposal as before."

Negotiators for both sides met for 80 minutes with Kenneth E. Moffett, the federal mediator who called the bargaining session. It was Moffett who announced the existence of some movement in the stalled negotiations which threaten to disrupt the season in eight days.

"The owners made a proposal and the union is taking a day to examine it," Moffett told the improptu news conference outside the offices of the Players Association. "A week ago, we were enjoying the third and fourth meetings."

Moffett said the written proposal was a good sign. "The fact that we're still meeting is good news," he said. The mediator said he couldn't characterize the proposal because "I don't know what's in it. We all know what's in it. We all know what we want."

"I'm always pleasantly surprised when there's any kind of movement. It beats reading a wall."

Moffett said the next meeting would be Thursday morning at the offices of the Player Relations Committee. Originally, the mediator had scheduled meetings for Tuesday and Thursday. But Ray Grebey, chief negotiator for the owners, said he would be in Washington Wednesday to meet with members of the National Labor Relations Board "at our request."

Last week, the Players Association filed a complaint with the NLRB seeking the clubs' financial data.

When leaving the bargaining session, Grebey said: "It was just a short meeting. I have no comment."

Then he added: "Check with us Thursday."

"We may have something then."

Marvin Miller, executive director of the Players Association, declined to talk to reporters after the meeting.

LOS ANGELES (AP) — An attorney for the National Football League told jurors in an antitrust trial today that the Oakland Raiders' challenge of NFL rules is a threat to the future of professional sports.

"We think the principle the plaintiffs are espousing in this case is as damaging to professional sports as drinking mercury-poisoned water is to people and animals," said attorney Patrick Lynch.

Lynch, in an opening statement which followed a full day of speeches for the opposing side, said: "This case attacks one of the basic keystones of the business of professional sports.

He argued that league football requires the cooperation of all teams, with Oakland Raiders managing partner Al Davis trying to break his agreement to keep the club in Oakland, and not a violation of antitrust law by the NFL.

"I submit to you that the antitrust claim in this case by the Raiders and the Los Angeles Coliseum Commission is a fabrication," Lynch said, "a trumped-up claim that the city of Los Angeles dreamed up to take away Oakland's team, to take away Oakland's football rights like they took the San Fernando Valley's water rights."

Of Davis' claim that the NFL is restraining trade by barring him from moving the Raiders to Los Angeles, Lynch said: "Nobody held a gun to Mr. Davis' head and said, 'You must join this league.' Mr. Davis made the choice."

As today's session opened, jurors were introduced to Georgia Frontiers, owner of the Los Angeles Rams, who sat in the back row of the spectator section flanked by her husband Dominic and Rams General Manager Don Klosterman.

Davis and NFL Commissioner Pete Rozelle sat separated only by an aisle in a front row but did not look at each other.

Attorneys for the Rams and the Oakland Coliseum were to speak after Lynch, and testimony was to begin Thursday.

The jury will decide the validity of an NFL rule that requires approval of three-fourths of the league's 28 owners for any franchise move. The Raiders' proposed switch from Oakland to the Los Angeles Coliseum was turned down by a vote of the club owners, and the Raiders joined an earlier antitrust suit filed by the Coliseum against the NFL.

During Tuesday's opening arguments by the plaintiff, attorney Joseph Altobello, representing the Raiders, told the seven women, three-man jury that the Raiders deserve to move up to a better stadium and better deal - just as the Rams did when they moved from the Coliseum to Anaheim.

Altobello compared the lucrative deal the Rams got in Anaheim to what he described as inadequate facilities in Oakland.

"What's really involved here is a concerted attempt to relegate Al Davis for the rest of his life to an inferior stadium situation," Altobello said, noting that Oakland has no luxury boxes for which the club would draw high fees.

Soccer club splits decisions

The Cal Poly women's soccer club split two decisions last weekend to finish up the season with a 9-5 mark.

The women suffered a 3-1 setback on the road against Stanford but then turned the tables on Santa Clara for a 4-1 triumph.

Nancy Wilson scored the lone Poly goal against Stanford and also scored one against Santa Clara to lead the Mustangs. Tori Burrows led the Poly scorers with two goals against Santa Clara and Kathy Lyons added one.

Wilson's efforts earned her all-league honors and honorable mention was given to Judy Burrows, Randy Smith, Alex Crozier, Doug Shaw and John Becker, who donated his time this season to coach the Mustangs.

Cal Poly hopes to capture both track crowns

Cal Poly will have a once-in-a-lifetime chance next week to firmly establish itself as a track power and plant itself in the collegiate record books.

Not only will the Cal Poly men's track and field team be seeking its third straight NCAA Division II National Championship but it will also be looking to become the first school to win both the men's and women's national track titles in the same year.

After the women's team walked away from Pennsylvania with the AIAW Division II National Championship last weekend, Cal Poly has the chance to become the first school to ever capture both ends of the double crown.

The women scored 65 points on the final day of competition to overtake South Carolina State, 69-51, followed by Idaho State, 50, Eastern Illinois 38, Cal State Bakercfield 36, Rice University 33 and Alabama A&M 32.

The men's team took the first step towards its third straight national title by destroying the California Collegiate Athletic Association last weekend at the conference championships. Cal Poly pulled up 220 points to bury second place Cal State Northern, by 67 points. Northernd was the runner-up to Poly in the national meet two years ago.

Cage dinner scheduled

The Cal Poly men's basketball team, the No. 3 team in Division II last season, has scheduled its annual recognition dinner for May 21.

The event will be staged at the Veterans Hall Grand Avenue with the social hour set at 6 p.m.

Tickets are set at $8 and can be obtained from the Mustang Boosters office or at the Mustang ticket office or from the Cal Poly Athletic department.

SPECIAL ENGAGEMENTS BEGIN MAY AND JUNE
Cal Poly engineers learned about road racing the hard way earlier this month in human powered vehicle championship races. The bike crew for the "Phoenix" include from left Greg Orr, George Leone, Ernie Ware, Mark Sullivan, Toby Mollenkopf, Randy Carr, Andy Tao, John Brockman, Steve Blair, Wayne Ross, Heidi Wagner, Bill Daley, Ken Doering, Felix Delgado, Mark Jackson, Joe O'Banion, Paul Lake and Rory Cooper. Not pictured was Kevin Brockman.

Poly engineers learn techniques road racing

A dozen mechanical engineers returned from Los Angeles with firsts in the college division of the National Human Powered Vehicle championships but they learned a hard lesson about road racing.

The students, who are part of the Cal Poly chapter of the American Society of Mechanical Engineers, were involved in more of a destruction derby than the scheduled human powered bicycle races.

In three separate road races, the Poly engineers easily outclassed the bikes in their division but finished second and fifth overall. The land speed bike, dubbed "Phoenix" by its designers, had a tough but interesting weekend at the championships staged earlier this month.

The first race had a Le Mans start where the riders run from the starting line, mount the bikes and then race. The Poly bike was the last bike to leave the starting line and it was a distant last. Once the bike was rolling, though, it moved its way through the pack to pick up a fifth place finish.

Securing in the riders in a Le Mans start was a distinct disadvantage for the "Phoenix" crew, according to bike coordinator Steve Blair. Everybody was long gone by the time the frame was together, he added.

In the next two road races the Poly bike fought a war with the bike from Vector. Poly should have won its next race but the crew did not know the course well enough and the bike missed a turn. By the time the bike was back on course it was too late to win but it did charge to nip Vector out of second place. "If there had been another lap in the race we would have won," said Blair. "Our bike bumped Vector's at the end but the other bike was just picking a position to eliminate us from getting a good line."

In the last road race, the same two bikes met again. The two bikes bumped at high speed heading down one of the straightaways and "Phoenix" rolled into the railing and was unable to finish.

Dead time

As the end of the quarter draws near, there is one thought on every students' mind: How the heck am I going to have time to study for finals?

There is a resolution now before the academic senate which would solve this problem and, in general, give students a breather before the end of the quarter comes crashing down around them.

The “Dead Week” proposal, suggested by the student senate, would merely require that teachers not give tests or written assignments during the week before finals. Unlike Dead Weeks on other campuses, there would still be classes, and finals and makeup exams regularly scheduled for the tenth week could still proceed.

However, it seems as though the academic senate is not pleased with the plan, which would give students—and instructors—a much needed, if brief, respite. There is a feeling that this would infringe on instructors’ academic freedoms, according to ASI President Willie Huff.

Having a Dead Week would be a great boon to Cal Poly students. At present, there is no rule that says there can’t be a midterm on the last day of class. Or that a major assignment can’t be given during the tenth week. Both of these student nightmares do happen at Poly.

Having a Dead Week would allow a student to adequately prepare for finals. Students sometimes flunk finals, thereby blowing their grade in that class for the quarter. With time to prepare, think things through and relax, students will do better on finals. If they don’t do well, they won’t have anyone but themselves to blame.

A Dead Week would also be beneficial for instructors. They’d have a chance to catch up on any grading they were behind on, and they could help students more during that last week. Instead of thinking up a midterm or assignment for the class, they would use the time to schedule extra office hours to help students with any last minute questions.

This is especially necessary at a university like Cal Poly, where students must ingest and synthesize a vast amount of technical knowledge in relatively short periods of time. This knowledge is often tested comprehensively, and students need time to study this much information.

Let us hope that the academic senate realizes the bind that many students are in at the end of the quarter, and votes to institute a Dead Week for Cal Poly. It would relieve a lot of mental anguish, hurried studying and general confusion on the part of students at finals time.

Workers’ rights ignored

BY MICHAEL WINTERS

In an abrupt break with traditional practice, the U.S. Department of Labor is reviving the coalition of big businesses in requesting the U.S. Supreme Court to overturn Occupational Health and Safety Administration regulations governing worker exposure to poisonous lead fumes and cotton dust.

Following President Reagan’s executive order of Feb. 17, government regulations must be examined for cost-effectiveness to determine if they will survive.

The philosophy under the Carter Administration was quite different. Then, a Labor Department sympathetic to workers succeeded in 1978 in obtaining OSHA rules obligating industries to go as far as reasonably possible to protect workers from lead, asbestos, and some other hazards.

Lead regulations now protect over 600,000 workers in industries such as steel, automobiles and paint manufacturing. Exposure has been linked to diseases of the nervous system, blood, reproductive organs and kidneys. Cotton dust regulations affect 200,000 workers, and exposure has been conclusively shown to stimulate bronchial breathing, an affliction of textile workers.

Ford, General Motors, AT&T, PPG and Bell Systems are among the industry coalition petitioning the high court to erode the worker protections upheld as recently as last July by the Washington, D.C. Court of Appeals. Already standing to gain from immense increases in government defense spending, these companies can now find a welcome ally in a totally unexpected quarter—a department which was created to be an advocate of the working people. Happy days are indeed here again for the mega-competitors.

This ravaging of workers’ rights will not go unanswered when labor support for Reagan is sought. Indeed, we all stand to benefit from following industry from part of its accountability. OSHA’s Achter merely seeks, he said, “a more responsible standard” for regulation of toxicants. The question is, responsible to whom?

Anti-nukes can’t rest on laurels

Editor:

Our thanks to the hundreds of students, faculty and staff people who helped make Monday night’s rally-vigil and Tuesday morning’s march a resounding success. The Atomic Safety and Licensing Board of the Nuclear Regulatory Commission must know the depth of commitment throughout the community of those opposing Diablo Canyon nuclear power plant. The people of the United States as well as officials in Washington know also since the march was covered by the national television networks.

We cannot rest on our laurels, however. We continue to fight an uphill battle against PG and E, the giant utilities and the executive branch of the federal government. It was announced earlier this week, for instance, that the NRC “shortened from 80 to 10 days the period between a licensing board’s decision to issue a low-power license and actual start-up of the plant. The NRC also reduced the delay for a full-power license from 30 days to 70 days.”

On Tuesday morning, PG and E lawyers argued against moving the hearings from a small room at the Discovery Inn to the Veterans Memorial Building across the street—where the public would be able to attend. One company lawyer stated that it was natural for there to be a large turnout on the opening day but that people would not be interested in going to the hearings after that. Fortunately, the argument that unofficial conditions had been created in the overly crowded room was listened and the hearings were moved to larger quarters at the Veterans Hall.

It is crucial that the energy generated continue and that everyone who has an interest in Diablo Canyon attend the meetings whenever possible over these next few days. The meetings were moved so that the public could attend the sessions and witness for itself the way the NRC operates. Please avail yourself of this opportunity. As we said last week, you may not have another chance!

Frazils

I CAN’T BELIEVE HOW MUCH WORK I’VE GOT DUE BEFORE THE END OF THIS QUARTER!

So then they rattlebratly make assignments as if there are no other classes existed.

How they expect us to fund the time for all of their work is beyond me.
