Punk-rock concerts restricted at Poly

BY RUSS SPENCER

The type of crowd attracted by prospective concert bands will be considered more carefully in the future due to a recent ASI Concerts Committee decision. Concert committee executives met with campus administrators and public safety officials Feb. 22 to discuss crowd control problems occurring at the Feb. 18 Pretenders concert. A decision was made not to hold anymore "punk-rock type" concerts unless Concert Committee members are certain they will be able to handle the "more physical" crowds attracted by such concerts.

The problems occurred when the crowd rushed the stage at the beginning of The Pretenders' concert, according to Craig Waldman, Concert Committee chairman. Safety aisles were blocked, many chairs were damaged, bottles were thrown, and continual dancing in the bleachers instilled fear they would collapse and Waldman said.

Campus Police Chief Richard Brug said the concert was nearly a disaster because of the lack of crowd control.

"But it's traditional," he said. "Where you have a punk rock group you're going to have problems. It happens every time."

Check adusted

Both Brug and Fire Chief Carson Johnson agreed that before a band is booked at Cal Poly, a check should first be made on what kind of show the band performs and what kind of crowd the show attracts.

"Jobboosh said many fire and safety codes were broken or ignored at the show, including blocked safety aisles, lighters in the gym, and electrical cords lying in dangerous places," Johnson said. "We'll learn from our mistakes at this concert and not let it happen again."

However, Fire Chief G. Carson Johnson, who headed up security forces at the concert, said problems at the show "weren't that bad."

"Our facilities just aren't made for a show like The Pretenders," Waldman said. "I don't think we'll be putting on a show of this caliber again. We can't be responsible for people's lives."

Since 1946—never having missed a day Feb. 25, after teaching at Cal Poly that before a band is booked at Cal Poly, a check should first be made on what kind of show the band performs and what kind of crowd the show attracts.

The type of crowd attracted by prospective concert bands will be considered more carefully in the future due to a recent ASI Concerts Committee decision. Concert committee executives met with campus administrators and public safety officials Feb. 22 to discuss crowd control problems occurring at the Feb. 18 Pretenders concert. A decision was made not to hold anymore "punk-rock type" concerts unless Concert Committee members are certain they will be able to handle the "more physical" crowds attracted by such concerts.

The problems occurred when the crowd rushed the stage at the beginning of The Pretenders' concert, according to Craig Waldman, Concert Committee chairman. Safety aisles were blocked, many chairs were damaged, bottles were thrown, and continual dancing in the bleachers instilled fear they would collapse and Waldman said.

Campus Police Chief Richard Brug said the concert was nearly a disaster because of the lack of crowd control.

"But it's traditional," he said. "Where you have a punk rock group you're going to have problems. It happens every time."

An enthusiastic audience greets Hall and Oates in the main gym during Fall Quarter. "Punk-rock" concerts

A charter bus was sent to Buellton to pick them up, but by the time that bus arrived, they had already fixed their own bus and started north. Arriving at Poly at 9:30 p.m., they then infuriated the Concert Committee executives by bringing alcohol on campus and refusing to dispose of it. Waldman said.

At one point, Waldman added, the band requested the show be cancelled, but the Concert Committee convinced them to put it on by mentioning the long lines of people, some of whom had been waiting over 24 hours for the show to begin.

"When they got here, they didn't really want to perform," Cletasway said. "They just weren't into it. Both the band and the roadies were definitely in bad spirits."

The band was convinced to play, however, and the show started at 11:45 p.m.—one hour and 45 minutes late.

Waldman said there were problems at the show from have been restricted at Poly as a result of unruly crowd behavior at The Pretenders' concert.

the very beginning, when the road crew lowered the lights for the opening band, Bow Wow Wow. before all ticket holders had entered and sat down.

Thus, from the start of the concert, Waldman said, people were standing up and milling around, which was a catalyst for other people to stand up and come down to the floor, building up a large mass of people who later rushed the stage and blocked aisles.

"Mad house"

The area in front of the stage, which one Concert Committee member described as a "mad house," was uncontrollable from then on. Waldman said.

"If the barricade would have snapped, people would have tripped and been trampled. I'm surprised no one was seriously injured," Waldman said.

"Our facilities just aren't made for a show like The Pretenders," Waldman said. "I don't think we're putting on a show of this caliber again. We can't be responsible for people's lives."

Design flaws found at Diablo

BY SHARYN SEARS

Staff Writer

Errors discovered in the seismic qualification of relief valves at Diablo Canyon Nuclear Power Plant were revealed by an Independent auditor recently.

This complication is likely to further delay the licensing of the Diablo Canyon plant.

The motion of a structure caused by an earthquake increases with its height and therefore it must be tested with a seismic response spectrum appropriate to the height of the structure, a Nuclear Regulatory Commission spokesman said Monday.

Toilet Young said that Pacific Gas and Electric Company will have to reexamine some of their power-operated relief valves (PORG) light of recent findings by PG&E's auditor.

Robert Cloud, an independent auditor hired by PG&E, discovered that a seismic spectrum for a height of 140 feet was applied to structures over that level. The discovery was revealed in Cloud's bimonthly report on Feb. 12.

The 140 feet criteria was applied to power operated relief valves at heights of 170-180 feet. Young said.

Cloud has not been approved by the NRC to serve as PG&E's auditor. Young added.

The 140 foot response spectrum was applied to heights above that because the pressurizer on which the valves sit is at a height of 140 feet. PG&E representative George Sarkisin said Monday.

The three valves show the pressures are of safety grade qualification, the spokesman added. However, they have been seismically qualified by standards not appropriate for their heights. Young countered.

PG&E is now in the process of modifying the relief valves to comply with requirements of its auditor.

Should the PORG's at Diablo fail, the will close down automatically. ThPPG&E spokesman said. In the event that thPPG&E automatic operation fails, the valve could be shut down manually, he added.

Similarities observed between the "valves at Three Mile Island and Diablo Canyon are invalid because: 'There is no relationship between the TMI and D Diablo valves,'" the PG&E spokesman said. Adding that the valves for the two plant were made by different companies.

The valves at Diablo Canyon were made by Westinghouse he said.

"Young called the valves a "TMI, 'very similar' to those at Diablo Canyon."

Longtime Poly prof dies

BY KEVIN KENNELLY

Senior Staff Writer

Before last Thursday afternoon, one wandering through the polished tan corridors of the Chemistry Department found himself in an unusual classroom. The class may have been introductory chemistry, organic chemistry or biochemistry. The trappings would be the same—empty cereal boxes and a chalkboard emblazoned with the cold colors of chalk which would make the sidewalk mural artists of New York envious. The pastel lines of chalk were never destined to map an artistic genre. Instead, the box is filled with the formulas and equations of the chemist, save one corner.

There would appear whimsical caricature of three smiling and three frowning rats, igniting fire and safety codes.

Dr. Bruce Kennelly

There are few who have would have recognized the Cal Poly of 1946. Indeed, many of the concepts taught today were not even discovered then. The Chemistry Department was in the fledgling stage and at 23, Bruce Kennelly was younger than many of his students.

In the ensuing years, he played a starring role in the construction and advancement of the Chemistry Department, a process which In the end, he said, "dictates what can and can't be done."

It's quite comparable to the type of music which they let them play on KCPR," he said. "They're just very conservative."
Students protest new cuts in aid

WASHINGTON (AP) — Thousands of college students, some chanting "books not bombs," on Monday lobbied Congress against President Reagan's proposed cutbacks in federal grants and loans for education.

The large turnout came amid mounting signs of resistance among both Republicans and Democrats to Reagan's call for cutting education aid from $8.5 billion to less than $6 billion in fiscal 1983.

Many students arrived in buses chartered by their schools or student associations.

"I'm very scared," said Frani Pheeny, 21, a New York University sophomore. "It does seem Reagan has lost support to more than 500 students who crammed into a room in a House office building.

The so-called National Student Lobby Day, organized by nine national student groups, was to end with a rally on the Capitol steps.

Environmental Speaker
The Environmental Sciences and Engineering Club will meet Thursday at 11 a.m. in Alt Conditioning Room 110. Doug Frey, from Gaines and Moore, an environmental and earth science consulting firm will be the guest speaker.

Resume Seminar
The Associated Student Chapter/American Institute of Architects is sponsoring a resume seminar tomorrow night at 7:30 p.m. in the gallery in the Arch Building. Jay Whisenant will be the content and style of an architecturally oriented resume.

Women in Planning
The Cal Poly Department of City and Regional Planning is sponsoring a conference on "Women in Planning" on Thursday from 9 a.m. to 5 p.m. in Architecture Gallery, Room 105. There will be guest speakers, presentations and career guidance.

Birth Control Workshops
Birth Control workshops are held every Thursday from 11 a.m. to 12:30 p.m. in the student Health Center. All students are invited to attend. Follow-up workshops discuss methods and use. Individual or couple counseling are also available by appointment.

Dancergenie
A national fitness program of dancergenie comes to SLO. On-going classes begin tonight from 5:30 to 6:50 p.m. at Pacheco School in the Multi-purpose room. Cost is $10 for four classes. In shape and stay in shape with dancergenie!

Mountain Trip
Escape! Masaian, Hawaii or the Shakespeare Festival in Oregon. That is where the U.U. Travel Center is going this quarter break. For more information, come in and visit us and sign up for a great get-a-way!

We accept VISA & Mastercharge

Economic indicators fall again

WASHINGTON (AP) — The broadest gauge of the nation's future economic health fell for the ninth straight month in January, indicating, in the words of Commerce Secretary Malcolm Baldrige, "that the recession has yet to run its course."

However, Baldrige and several private economists said Monday that recovery could still arrive by late spring or early summer, especially if interest rates continue their recent decline.

The Commerce Department's index of Leading Indicators dropped 0.6 percent in January and would have fallen nearly five times as much if officials had not detected effects of a sharply reduced average workweek, a figure they said was distorted by severe weather.

But Baldrige noted that January's announcement of decline—and the 0.3 percent drop of November and December—even much smaller than those of last autumn. And he said, 'The fact that the indicators were on the minus side in January is not inconsistent with forecasts of a second quarter recovery in the economy.'

Hunger Coalition
The Campus Hunger Coalition Club meets Thursday at 7 p.m. in Room 227 of the Agriculture Building. Become involved with education and action concerning hunger issues at home and overseas.

ASME Meeting
Isaac Walker from the CIA will speak at the ASME meeting tomorrow night at 7 p.m. in the Dester Building. Room 126. Walker will speak on how engineers fit into the CIA. All engineers are welcome.

Bike Repair Day
The Cal Poly Wheelmen will fix your bicycle on Thursday in the U.U. Plaza beginning at 10 a.m. The price depends on what repairs are needed. Take advantage of this opportunity to get your bike fixed!
Poly student seeks to dispel myths about the deaf

By CAROL JOHNSON

Rick Stensby has the answers to these questions—and more. Stenaby is a 21-year-old student at Poly in the morning. If you couldn't hear an alarm tone, if you were unable to hear what the instructor was saying?

"Some people are not aware that deaf people are just like anyone else," said Stenaby. "Most people just don't know how to react.

Stensby is the president of Disabled Students Union, a club for handicapped students here on campus, and he is determined to dispel some of the myths and misunderstandings surrounding deaf people. He said some people actually think deaf people can transmit their deafness to others as if it were a disease.

"People think deaf people are mentally retarded. Or they're afraid of them and reject them," said Stenaby. He said one of the worst misconceptions is the false assumption that deaf people are also dumb. Just because it may sometimes take Phil longer for deaf people to comprehend what people are saying, certainly does not mean they are dumb, he said.

"The most frustrating thing is when people say something to me, and if I don't catch it the first time, they say, 'Oh, forget it,' as if it were no big deal," Stenaby said. "If it wasn't important, why did they say it in the first place? This really bothers me." Stensby is one of two deaf children in a family of six. He said he learned to speak because his deafness was discovered at a very early age, so many parents do not realize their children are deaf at first. It was a long, hard climb full of frustration and learning processes that finally enabled Stenaby to say his first word at age six.

"The first word I ever said was 'ball.'" Stenaby went on. "I had to pronounce each consonant slowly, catching my breath between each letter.

"When Stensby's parents realized he could speak, they took him out of the private school he was used to, and sent him to a public school. Stensby said they were very confident that he could get used to coping with the difficulties and pressures of the hearing world.

"Sure," said Stenaby, "it would be easier to go to a private school, but it is very important to know how to get along in the real hearing world. I knew I had to do it sometime." Thus, Stenaby decided to continue his education at Poly.

Stensby's interest in drawing led him into his architectural major. He said architecture "suits him just fine," because a good deal of one-to-one communica tion is involved between himself and his client. A business that involved contact with a large number of people, a lot of telephone calls and business meetings would not be easy for him.

"It is hard for a deaf person to continue on through school to get a higher degree," Stensby said. "But this is only because it is difficult to obtain a large vocabulary." He said he reads quite a bit, but it is hard to learn and apply new words.

Yet Stenaby has accepted his handicap completely because he had no choice. He said he has no regrets and blames no one for his deafness. He has note takers and oral interpreters, who said he has no problem reading most of the instructors' lips, but when he glances down to scribble notes, he misses out on the next statement.

Stensby catches 25 to 30 percent of what people say to him. He said he picks out the key words, then figures out the rest of the conversation himself. He watches people's lips, tongues and facial expressions.

As for getting up on time in the morning, Stensby said his interest in drawing often keeps him up quite late. He uses an electric fan. If he goes to a pre-designated time in the morning and tries to fall asleep on his face, he said he is eager to make people feel comfortable with his deafness. He says he regards himself as being as normal as possible. Anyone who knows him would agree.

Students to meet industry at alumni dinner

BY JUDY LUTZ
Staff Writer

Cal Poly students will have a chance to meet prospective employers at the third annual "Meet the Industry" dinner April 4 sponsored by the Los Angeles chapter of the Alumni Association. The alumni hold the event to bring together students, alumni and industry representatives, said Chapter President Kurt Schroeder. It will provide an informal atmosphere in which students can find out more about the companies they are interested in working for, he added.

"It's been heavily into the business area," Schroeder said of industry representation at previous dinners. "We're trying to bring other areas out—the other industries—and involve the other schools."

Although the architecture school declined to participate, the dinner is open to students in all other majors, Schroeder said. Juniors and seniors will be granted priority.

Buses will be available to transport students to Los Angeles for the event, according to student coordinator Joyce Draganza. The buses will return to Cal Poly the same evening. The cost of transportation has not yet been determined.

Students interested in signing up for the dinner should contact their school's faculty representative for the event: Susan Currier, Communicative Arts and Humanities (Ext. 2135); William Forberg, Engineering and Technology (Ext. 1249); Walter Perlick, Business (Ext. 2822); Ronald Regan, Agriculture and Natural Resources (Ext. 2279); Ralph Warten, Science and Mathematics (Ext. 2679).

Students from the School of Human Development and Education may contact Frances Parker, Child Development (Ext. 2225); Ambroco Lopez, Education (Ext. 2866); or Lynn Jamieson, Physical Education (Ext. 2096).

For more information, students may contact Draganza at 541-4193.

Poly Chemistry prof dies after 36 years

accorded, as head of the department in 1967. The love of teaching and his interest in working with the students led Dr. Kennedy to return to full-time teaching in 1972. Although deeply involved in research ranging from livestock feeds to appetite suppressants and alcohol fuels, his first concern was always teaching.

Dr. Kennedy was awarded the Distinguished Teacher Award in 1968, appeared in the 1970 edition of Outstanding Educators of America and is listed in Who's Who in American Men of Science. He received a doctorate in nutritional biochemistry from Purdue and a bachelor's of science from the University of Kentucky. Dr. Kennedy was a member of the Society of the Sigma Xi, a charter member of the Nutrition Today Society and was president of the Cal Poly Staff Association from 1986-1987.

An architect, much of his free time was devoted to residential and commercial building design and construction.

His objective was to provide his students with practical knowledge which could be used in their daily lives and in their careers, and to prevent that knowledge in an enjoyable manner. The evidence that this has been achieved is in the thousands of students who laughed at the pictures of smiling rats and who learned the rainbow of formulas.

He is outlived by his wife Teddi Kennedy, a teacher at the San Luis Obispo Coast Unified School District; his son Kevin Kennedy, a commercial building design and construction major, of people and certain types of music bring certain types of people and certain types of behavior.

"Before the committee brings anybody, it will have to be prepared to control the health, safety and well-being of the people attending. If you can do that, you can bring whoever you want to bring," said the committee's spokesperson, Waldman. "But what it really boils down to is the crowd," Waldman said. "They have to mellow out."
Bakersfield wins; Poly awaits return

Poof trouble came to haunt the Mustangs for the first time in their season Thursday night as the Mustangs lost the California Collegiate Athletic Association men's basketball championship game to Cal State Bakersfield, 50-48, before 2,864 eerily Headrunner partisans in Bakersfield's Civic Auditorium.

Poly's leading scorer and rebounder, Kevin Crosan fouled out with 7:11 remaining in the game with his team hanging on to a five-point lead. Starting center Mike Franklin joined Lucas on the bench a minute later with his fifth personal foul.

Despite having their two leading scorers on the bench, the Mustangs still had a chance to put the game out of reach in the final minutes with some decent free throw shooting. But Mike Burris, Mike Sasa and Mike Wall all missed the front end of one-and-ones as Bakersfield out scored Poly 6-0 in the final four minutes.

The win not only gives Bakersfield the conference title but also gives the Runners the right to host the NCAA Division II Western Regional this Friday and Saturday. For consolation, the Mustangs, who must already think that Bakersfield isn't even a nice place to

A dejected Alex Lambertson is taunted by an overzealous Bakersfield fan after the Junior guard's 18400 Jump shot with three seconds left in the game to give the Runners a 50-49 victory.

Poly places 2nd in Western Regional wrestling match-up

BY VALERIE BRICKMAN

-Cal Poly's wrestlers captured second place at the Western Regionals over the weekend with 76.75 points, while Brigham Young University won with 79 points.

The Mustangs will advance to the Division I National March 11-13 in Ames, Iowa. "The altitude definitely affected us, it was a handicap for us," coach Vaughan Hitchcock said.

The team had four individual champs: Mike Barfuss, Chris Cahn, Pat O'Donnell and Louis Montana.

The other Cal Poly wrestlers were voted to compete at the national championships: Jason Elswoy, Joe Elswoy, Barfuss, a senior, wrestling at the 194-pound weight class got the Mustangs on their way streak with his 18-0 superior decision over Morgan Woodhouse from BYU.

Cain wrestling at 142 pounds continued the streak with his superior decision over Tony Tracey of the University of New Mexico, 6-0.

Wrestling at the 150-pound class, junior O'Donnell defeated Lonnie Currier of Wyoming, 4-0.

Endding the champ streak was junior Montano with his superior decision over Billy Boyd, 13-1.

"I am extremely pleased with the four champs, they had decisive wins with their four opponents scoring only seven points against them," Hitchcock said.

Gutierrez, a 181 pounder for Poly, was voted to compete at the nationals by the seven coaches because of his performance throughout the tournament.

Finishing second in the 190 pound category, Elswoy was also voted to go to the nationals.

Dave Ambler was second in this 177-pound weight class but wasn't chosen to go to the nationals.

"I felt that Dale should have qualified, he wrestled very hard," Hitchcock said.

"I felt that there was poor officiating In his match. Dale lost better than his opponent," Hitchcock added.

All wrestling for Poly were David Miller at 126, Joly Noland at 167 and Josh Washington at heavyweight.

"Dave Miller gained a great deal of experience and fought very hard," Hitchcock said.

Montana finished second in the semi-finals but lost to Kenny Haft of BYU, 9-0.

Skiveteran to speak

The Cal Poly Ski Club will have a special guest speaker at their next meeting on Wednesday night, 7:30 p.m. in the Science building, room B-5.

Darren Linstrum, a 30-year veteran of the National Ski Patrol and a systems an­ alanche instructor, will give a lecture on avalanche safety.

"How to ski and live and how to tell about it." Instrum's lecture will be rare avalanche films, a presentation on the dos and don'ts of how to avoid avalanches and what to do if caught by one.

Elections for the club's 1982-83 officers will also be held at the meeting along with signups for the Sun Valley trip over the spring break.

Opinion

Atomic lemon

The more we hear about it, the less we like it. This thought, more than any other, represents our concern about—and our opposition to—the Diablo Canyon Nuclear Power Plant. Every few weeks, it seems, we hear about new design flaws that cause further delays in the proposed activation of the plant. We wonder how long this continuing series of revelations concerning design errors can go on before both the Nuclear Regulatory Commission and Pacific Gas and Electric Co. will admit the obvious: Diablo is an atomic lemon.

Last Friday the latest in this series of nuclear mishaps unfolded when an audit of the plant's seismic design indicated Diablo's pressurized relief valves had failed to meet proper safety standards. (These valves were similar to those that failed to operate at Three Mile Island, triggering the worst nuclear accident in American history.) According to NRC officials, the power-operated relief valves are now mounted at an elevation of 170 to 180 feet; however, the valves were designed by PG & E to withstand seismic effects at an elevation of only 140 feet.

Jesse Crews, the NRC's western regional director for reactor programs, told The Associated Press that "you will undoubtedly find that (earthquake) acceleration (at these higher elevations) is higher, and they may well have to add supports or strengthen the supports of those piping systems."

Crews predicted that as a result of the latest discoveries, Diablo won't be reissued its low-power-test license until summer.

Interestingly, this was discovered during a seismic audit by PG & E officials, an oversight group that was ridiculed by anti-nuclear representatives for its past history of close association with PG & E. (One wonders the scope of design errors that would be discovered if an independent auditor were conducting the investigation.)

Furthermore, the newly discovered flaws indicate that PG & E officials were in error when they testified at last month's Diablo licensing hearings that the pressurized relief valves conformed to seismic safety standards. (So much for "expert" testimony.)

Crews also said that the NRC had been "let down" by PG & E officials, adding "we had sort of assumed that design is...being done by professionals in the area of engineering and would not require our close examination."

Utility representatives have long contended that Diablo is the safest nuclear power plant in the nation—as well as the most widely investigated and monitored U.S. atomic power facility.

Yet if the design errors we've witnessed have, prior to the audit, gone undetected at the "safest" nuclear plant in the United States, what of the "less safe" plants? Indeed, what of the entire nuclear industry?

Letters

Great American Hero?

Editor: Please allow me to voice my objection to the article on bighorn sheep hunting which appeared in the Feb. 24th Mustang Daily. It is inappropriate to portray this hunter, Ernie Righetti, as a great hero. In fact, he is a common plunderer.

He does not take the lives of the sheep to sustain the physical needs of himself or his family. Nor does he ever take the time toグルее the sheep for personal satisfaction. In a thoroughly unequal contest Righetti pursues his prey (even with the assistance of several guides and equipment-bearers) and valiantly pulls the trigger. This is considered heroic?

I therefore have a proposal. It would be splendid, indeed, if we might feature a new attraction for Poly Royal this year. Let us move Righetti's entire collection of sheep to the union. Further, let us have Righetti stuffed and mounted on wheels—poised for eternity pulling the trigger. Thus we could complete this fabulous collection and remove at least one "Great American Hero" from an otherwise pleasant landscape.

Pamela Joan Williams

No thanks, ASI

Editor: I would like to express my discontent with ASI and Mr. Paris's letter regarding the crowd's behavior at The Pretenders concert.

First of all, ASI pulled a dirty trick by handing out vouchers for reserved seat tickets on Sunday night, the night before the advertised date of ticket sales. For those fortunate enough to be at the U.S. Tiddleywinks Championship that Mr. Paris seems to hold as such a derogatory fashion. He also is afraid that I am going to lose his right to use the dunes. All because of the actions of a few that abuse the situation. But I have to consider the possibility that even though I don't abuse hand­guns, my right to own one may be costing society more than I can justify by any personal satisfaction owning one brings me. (Nineteen years old, I have lived in front of a gun barrel from birth."

Editor: Yes, you are right. The more we hear about It, the less we like It. We wonder how long this continuing series of revelations concerning design errors can go on before both the Nuclear Regulatory Commission and Pacific Gas and Electric Co. will admit the obvious: Diablo is an atomic lemon.

Editor: I understand Scott Buck's indignation concerning the label that has been placed on him as a ORV user. He does not feel that it is proper that all ORV users should be lumped together in such a derogatory fashion. He also is afraid that he is going to lose his right to use the dunes. All because of the actions of a few that abuse the situation. But I have to consider the possibility that even though I don't abuse hand­guns, my right to own one may be costing society more than I can justify by any personal satisfaction owning one brings me. (Nineteen years old, I have lived in front of a gun barrel from birth."

Letters: Is the satisfaction worth it?

Editor: I would like to express my discontent with ASI and Mr. Paris's letter regarding the crowd's behavior at The Pretenders concert.

First of all, ASI pulled a dirty trick by handing out vouchers for reserved seat tickets on Sunday night, the night before the advertised date of ticket sales. For those fortunate enough to be at the U.S. Tiddleywinks Championship that Mr. Paris seems to hold as such a derogatory fashion. He also is afraid that I am going to lose his right to use the dunes. All because of the actions of a few that abuse the situation. But I have to consider the possibility that even though I don't abuse hand­guns, my right to own one may be costing society more than I can justify by any personal satisfaction owning one brings me. (Nineteen years old, I have lived in front of a gun barrel from birth."

Registration: a required responsibility

Editor: I am responding to Phil Paris' Feb. 24th anti-gun registration letter. I would like to clarify a basic discrepancy which Mr. Paris seems to hold as truth...handgun registration is not the same thing as taking away your hand­gun. Registration is just a form of re­quired responsibility for owners of a deadly weapon. Automobile owners must register their vehicles, and are held accountable for them. We are ask­ing no more of handgun owners."

Cynthia Raiser.
