Facility awaiting bargaining results

BY SHARON REZAK

Two California State University groups now have bargaining agents, but as of press deadline state college bargaining agents were still awaiting for election results.

Results for the CSU faculty bargaining agent run-off elections were announced by the Public Employee Relations Board in Sacramento Tuesday.

However, two other CSU employee bargaining units reached decisions in separate agent run-off elections. Unit 2, which includes health care workers that are not physicians such as nurses and pharmacy workers, voted by a margin of 72 votes over the Congress of Faculty Professors to represent them at the bargaining table.

Unit 4, the academic support unit which includes university employees in student affairs, counseling, testing and registrars — paraprofessionals, librarians and clerical workers — voted the United Professors of California which received 69 votes.

"Pet Project: bringing the handicapped love and life"

BY RON HUTCHERSON

A pet project may sound like a hobby or fun and games to some, but for a couple of Cal Poly students and five handicapped people at the Friendship School in San Luis Obispo, the Pet Project is opening up a new world.

Eric Pariser took the microphone from Lazof, who came to voice concern about the effectiveness of the project. Lazof was interrupted last week as he attempted to make a scheduled speech.

"Leaflets can become an eyesore, blowing across campus and piling up against fences," he said. "We have a beautiful campus here, and without some control, leafletting could be a litter problem."

Lazof 'because he thought the speech was too political.'

"Pet Project" is a program that works with the physically and mentally handicapped, helping them become better able to relate to people.

The project has not yet been completed. But even if positive results are not conclusive, according to Olsen, that does not mean that the project has not been successful or that it will not work. He said that they would really be run twice a week for 10 weeks and that four weeks is really not enough time.

Kulchin and Olsen have been working with the dog for about a year and a half but have not had any problems due to the dogs good nature. "But the hamster was a matter of picking a good animal."

"Usually they (hamsters) not this good, we just used to help the physically handicapped. They then took the idea and worked with it to include the mentally handicapped, an area of interest for both of them.

"It's really hard to keep some of them away from the animals," Kulchin said.

The project is in its fourth week.

The effectiveness of the project will be measured by taking a behavior profile on which is filled out by the students themselves in order to show the progress made after the project has been completed. But even if positive results are not conclusive, according to Olsen it does not mean that the project has not been successful or that it will not work. He said that they will run twice a week for 10 weeks and that four weeks is really not enough time.

"It is the two do not work alone in their project. In each of the two weeks they work with the students helped name, and Jessie, a bright Australian Shepherd.

Hinckley sibling testifies at trial

WASHINGTON (AP) — After John W. Hinckley Jr. left home "to exercise devils from my body," his brother and sister tried unsuccessfully to persuade their father to have him committed to an institution.

"Nothing was done, the brother testified, three weeks later, on March 30, 1981, Hinckley sprang from a crowd of reporters and photogs in Washington and shot President Reagan and three other men.

In a clear, confident voice, Scott Hinckley told the jury his father was afraid to have John committed because "the emotional trauma that may be associated with putting him in an institution may do more harm than good." Scott Hinckley, at 31, the president of the oil exploration company of which John W. Hinckley Sr. is chairman, said: "I just felt the situation was totally out of control." In February when John quit a new job after two days and fled home leaving the exorcism note.

Scott said he discussed the situation with his sister and brother-in-law Steven Ellis in Dallas and "It was our recommendation and conclusion that John should be institutionalized."
Senior project bobs
in spite of materials

BY LORI MARLETT

All these are concepts familiar to Dave Sandkuhl, 23, civil engineering major, who just built a concrete canoe for his senior project.
Yes, you read correctly, it is concrete or rather a substance called ferrocement. Hull tests. What a coincidence.

Sandkuhl and his partner, Ronald Haga, 23, civil engineering major, conducted the hull tests. Five miniature models, three feet in length, were built with polyurethane foam and plaster coating. After relative comparison, the unsuitable hulls were eliminated.

Sandkuhl and Haga used cross-section characteristics to build their canoe. The construction took approximately two and a half weeks. The price of tap shoes ranges anywhere from $14 to $28.

"Tap dancing is not just for women," said Deipy. "Men would enjoy it too," she said smiling.

"Tap dancing is good exercise," said Terry Langford, a tap dancing instructor presently at Cal Poly.
Tap dancing instructor Lisa Deipy (left) watches as Bill Kawaguchi (center) and Greg Gallegos (right) make the floor sing.

Poultry leader chosen

Dr. Philip L. Potts Sr. has been named head of the Cal Poly Poultry Department effective July 1. Dr. Warren J. Baker, the university president, has announced.
Dr. Hazel J. Jones, vice president for academic affairs, Dr. Lark P. Carter, dean of the School of Agriculture and Natural Resources, which includes the Poultry Department, and a faculty committee recommended Potts appointment.

The new department head succeeds Dr. Robert A. Voitle, who resigned after two years to accept an administrative appointment with Auburn University of Alabama.

``Tap dancing is not just for women," said Deipy. "Men would enjoy it too," she said smiling.

Cal Poly adding procedure has no consistency

BY GAIL PELLEGRIN

It is not likely that anyone will graduate from Cal Poly without first trying to add a class.

Robert, attempting to add classes, students will find a variety of procedures from professor to professor. According to Hazel Jones, vice president of academic affairs, "How to add students is left up to the professors' preferences and any determining circumstances," making it understood that advanced students, or students in the major will get priority.

It would be inappropriate for lower division students who have several quarters left to get major classes by "drawing lots." Students who are allowed to the classes to graduate, she added.

According to Jones, if thoughtlessness occurs as part of the faculty, "Students who try to add classes, they should go up to the department heads with their complaints.

Dean of the School of Science and Mathematics William Langworthy suggested this procedure: If students are low on the priority list for Fall Quarter, try to get on an add list as soon as the schedules come out.

Some professors may ask that students wait until fall, but it's worth a try. he said. According to Jones, to alleviate the inconsistencies by adopting a uniform adding policy for every situation, would result in a new series of inequalities.

Providing information and talking with professors about the situation can help, Jones said. Also, to aid professors with their decision, they can check enrollment rosters to clarify the class level of students, she added.

The school deans have concerns about the add and drop periods, and have suggested that students should be allowed one week to organize their schedules, she said, noting nothing definite has been done.

"The quarter system is halfway moving the add period to three weeks, for the students will miss one third of the work," Jones added.

According to Thomas Johnston, associate dean of the School of Communication Arts and Humanities, "Adding procedures possibly need to be discussed due to the number of students and the limited classes," noting it would be impossible to agree across campus.

Student can't get classes because they register last, "Carl makes it difficult for them," Johnston said. He added that the students make it difficult for themselves also, by taking classes only at specific times.

Senior Project

From page 3

"Sleepless Night" was chosen when a song by the same title came on the radio one evening after hours of labor. The same just seemed apropos. Using an original hull analysis and a concrete testing method that had been approved by the American Society of Testing and Materials, the two CE majors were ready for the "water test." The project was a success. "I don't regret any of the time spent," said Sandkull. "It was a good experience in terms of using my engineering abilities and administrative skills to get it finished.

Sandkull was able to bring a lot of previous experience to this project.

As a transfer student to Poly, Sandkull helped to build a canoe last year which took second place at Davis.

Picking pastor to take months

BY JEANETTE VAN BERKEL
Staff Writer

Cal Poly will not have a campus pastor for students before September 1 because of the lengthy process involved in selecting a replacement for Rev. Bruce Tjaden, according to one member of the United Ministries Advisory Committee.

"We're going to require a lot of feedback on both sides," said Rev. David Smiley of the Christian Church of San Luis Obispo. "We want to really know the person we hire in-depth, and that's going to take a while to do."

Smiley added the selection process will include a prospectus, written by all candidates for the position, proposals written by the committee and the candidates, letters and telephone calls.

"We'll need quite a bit about the person we hope to hire before we ever meet him face-to-face in an interview," Smiley said.

The Advisory Committee, which consists of five lay people and three pastors, is presently considering what is important in a campus pastor.

"In addition to taking over where Bruce left off in counseling, we'd like the new pastor to know the importance of worship services in the Campus Christian Center," said Smiley. Bible studies, community involvement and participation in local churches are also important factors to be considered, he said.

"It's also imperative that whoever fills the position sees the need to build up a stronger base with the student students," Smiley added.

The position, announced through the United Ministries of Higher Education in Los Angeles, will become vacant at the end of this quarter when Rev. Tjaden becomes a full-time marriage and family counselor.

"Bruce has really built up a base for the students here," said Smiley. "It's going to be tough to replace someone who's been that close with the faculty and students."

"We know we'll find someone to fill the dreams we have," he said. "Because we are taking our time and really going in-depth with our interviews, we can establish the 'home away from home' feeling that the CCC should express through its pastor."

Retiring Prof. begins to clean his office

BY JEANETTE VAN BERKEL
Staff Writer

The tall and balding man looked around his office in the Mechanical Engineering Building. Roles of diagrams are stuck between the already-packed shelves that reach to the ceiling and books and notes are stacked on the floor. His desk is a cluster of engineering papers and pamphlets, of notebooks and folders. A coffee pot and dining hall cup stand on another table. The room, to say the least, looks used.

The man took off his glasses and sighed. "Well, I guess it won't be that hard to move once I start to clean up some of this stuff."

For Walter E. Holtz, head of the Environmental Engineering program, the chair represents a long and good working relationship with students and the faculty. Holtz will retire this June after 17 years at Cal Poly.

The best value around Europe. From around US$16 a day!

Action, adventure, sightseeing, fun...our new brochure offers a fabulous choice of value-for-money tours for the 18-35's. CONCEPT tours, where you stay every night in Comfik's exclusive SpecialSuperoviers (like a French Chateau or an Italian Villa) or one of Comfik's unique canvasVillas throughout Europe. If you never have to put your own bed away again, you can simply be free from the hassle of messy suites included in the price.

But wait, for 1986, Comfik is introducing this fantastic new budget FREETIME holidays, taking you to the highest standards in at least as little as US$16 a day.

Comfik's Europe...all the fun and freedom without the hassle!

Daum holds key to Cowboys' future

Daum is out of Twentymile Palms High School, where he started on the varsity football team as a junior and senior years. Daum is 6-foot 6 and weighs around 240. He has run the 40-yard dash in 4.8.

"Charles is a good athlete," Brandt said. "He's tall and has room for development. He's the kind of player we are interested in. We are going to look at him as a possible of a defensive player. We're going to see where he can play best. About three years ago Coach Harper (Joe Harper, former Mustang football coach) recommended him to us and we have been following him ever since. How hard he works between now and training camp and how much weight he puts on will be determining factors if he will make the team.

Making the team. It has always been one of Daum's major goals no matter where he put on the pads. I've never been an arrogant person. I'm really satisfied with what happened. Who wouldn't like to have a shot at that Super Bowl ring every year? Dallas is the majority's favorite team. Being drafted by Dallas is also a prestige thing. To be drafted, in a way, it's an incentive too, to be drafted by Dallas.

"There is never any definition to getting drafted. I hoped I would beat the odds if I got drafted before I thought I would. Seattle said if I wasn't taken by the 12th pick, I wouldn't get drafted. I really hoped I wouldn't be around that long." I had a chance to switch from offense to defense. It was mostly "Yes Sir, No Sir." I have a class at 6:10 pm. from Dallas' Director of Personal Development and Vice President, Gil Brandt."

"I thought he was calling me to ask me about being free agent if I didn't get drafted," he said. "The first question he asked me was when was the last time I played defense. I told him in high school. Then he told me the third lineman before Mike, "Charles said. "I was the third lineman before Mike, so he had a chance to switch from offense to defense. Mike had been drafted the year before by the Miami Dolphins and I found out I was released. I put the days back-to-back. I got drafted about a half hour later. We didn't even have a chance to talk, because she had a class at 6.""

"I played behind Mike Bailey while I was here. He was any guy who would do anything. When we went out on the workout sheet we got. He bench presses 420 pounds. He was a big influence. Bailey was crazy. (Brother) Mike is the other half of Mike Bailey. He's a very solid guy from wood and he wouldn't blink. He's more of a controller player than a pass rusher.""

Charles Daum is out of Twentymile Palms High School, where he started on the varsity football team, as well as the 28 NFL teams. The team — the Dallas Cowboys — have a key to Daum's future.

"Ah to think he was calling me to ask me about being a free agent if I didn't get drafted," he said. "The first question he asked me was when was the last time I played defense. I told him in high school. Then he told me the third lineman before Mike, " Charles said. "I was the third lineman before Mike, so he had a chance to switch from offense to defense. Opinion

It's about time

It's an idea a long time coming.

Among ASI President elect Sandra Clary's proposals for next year is a plan for teacher evaluations by students. Evaluations have always been a sensitive issue on any campus, including Cal Poly. But, unlike many other state campuses, Cal Poly continues to lack a constructive public evaluation of instructors. They are often perceived by instructors as one-sided attacks by students — a way to get the instructor — not a means by which to make constructive criticism and provide students with information from which to choose courses.

Clary's idea is different. Modeled after teacher evaluations used on other state campuses, her concept involves the faculty in the formation and approval of the evaluation. Clary plans to include a course outline from the instructors so students can choose the style of course they prefer; its number of exams, whether they are based on lecture or text, how often during the quarter and what kinds of projects or papers are expected. Most students are at Poly to learn, we are not afraid of hard work as long as it is relevant and worthwhile.

Aside from the evaluation and course description aspects of the proposal, Clary sees a further constructive use. There exists a need for a student representative to the Personnel Review Committee of the academic senate, the group that reviews retention, promotion and performance of Cal Poly faculty. The addition has been opposed, said Clary, because many instructors question the validity of a student representative, asking how the board can be certain the student has a good idea of the student body's view on an instructor's performance.

With the evaluation, the representative will have an accurate idea of that view and be able to present the committee with it during deliberation.

Teacher evaluations can be valuable sources of information on course design and instructors, of praise as well as criticism. Above all, they are the considered opinions of those most affected by instructor performance, us, the students. Despite what many instructors believe, the large majority of Cal Poly students are capable of providing serious evaluation, informed and mature, not spiteful and irresponsible. We know when we are learning and are not reticent to praise an excellent instructor, just as we know when improvement is needed in class design and instructor performance. Teacher evaluation is an idea whose time arrived a long time ago at Cal Poly. Hopefully through Clary and others it will become a reality next year.

Letters

No freedom of our own

Editor:
As a Latino member of the community, I thought it would be nice to attend the campus activities for Cinco de Mayo. This was to be a celebration of freedom. However, when a member of CASAS went up to speak, he was not allowed to use the loud speaker.

I didn't find anything about his speech in any way radical. I feel that by taking his freedom to express himself away, the Cal Poly students were instilled by not having a chance to listen and make a choice for themselves.

As a home owner and tax payer, I have to ask myself "What am I paying taxes for?" I thought a university was a place for a better education. What I saw today really put a fear of "Big Brother" into me.

A small child visiting from a local elementary school asked her adult companion "Why is the man yelling? Did the microphone break?" The adult's answer would have been my own, "He's yelling because he wants to be heard."

How ironic, that at a celebration of another country's day of freedom, we in San Luis Obispo have little and at times no freedom of our own. Thank you.

Cecilia Enriquez Skals

Death of free speech

Editor:
May 6, the Cinco de Mayo celebration sponsored by MECHA and ASI Special Events was disrupted, when a certain Eric Pereser decided that one of the speeches was illegal. I was that speaker, representing the campus group CASAS and invited to the event by MECHA.

Aside from what this one student claims, my speech was in no way more "religious" nor more "political" than either the speech before or the speech after mine. Furthermore, the theme of my speech had been fully discussed with MECHA prior to the event and was considered appropriate for Cinco de Mayo. Apparently, this student feels that someone has vested in him the power to decide what shall be heard and what shall not be heard on this campus. I think that perhaps MECHA is a more responsible judge of what is appropriate for their event and is capable of organizing their own program. Does this ASI functionary hold a Ph.D., then, in both religious studies and political science, that we can trust him to make such decisions?

He explained to me that I should not get up. Why, why get upset just because the basic democratic rights of this country are trampled underfoot? Why get upset about the insult to MECHA, to CASAS, to myself and to the Cal Poly student body in general? I'm sure that few students reading this will get upset or care enough to express their disgust, but it remains an enigma to me how you can consider yourselves good Americans if you won't stand up for your own rights.
