**Bioethical debate series concludes**

Privatizing genetic research findings troubles professor

By Kristin Roncarati

Lawrence Houlgatte, a philosophy professor concerned with the ethical implications of genetic research, talked to a group of about 30 students and faculty about "The Ethical Limits of Genetic Inquiry," last week.

The speech, in which Houlgatte confronted such questions as whether parents should be allowed to "design" their children's genetic makeup and what limits should be placed on the acquisition of new genetic knowledge, was the final speech given in the "Bioethics in the Life Sciences" series, sponsored by the biological sciences department.

Houlgatte expressed his concern over the question of whether genetic researchers should be able to "privatize" their findings in regards to their research on the relationship of certain genes to diseases and the highly debated subject of "eugenics" or "genetic cloning." Houlgatte said that because genetic research ultimately affects all of us, there are ethical implications and such information should not be classified. "We have to think of the consequences," said Houlgatte. "We can't say there is no concern to others."

One of the issues which has been receiving a lot of attention recently is the "designer baby" movement. A number of researchers are working on developing techniques that would allow parents to select the genetic makeup of their children. This has led to concerns about the potential for eugenics and the ethical implications of manipulating human genes.

Some of the concerns raised by Houlgatte include the potential for the genetic modification of human beings to become a form of eugenics, the possibility of genetic discrimination, and the potential for the creation of a genetic underclass. He also discussed the potential for genetic testing to be used to make decisions about job qualifications and insurance, which could lead to discrimination.

Houlgatte concluded his speech by calling for a moratorium on genetic research until ethical and legal issues can be resolved. He also called for more public debate on the issues surrounding genetic research.

**Disabled students look for more work space**

Joan M. Halpin

Some Cal Poly students have benefited from the use of computers in the classroom, but this benefit has led to competition for work space.

Although needed, computer terminals are adding an overload to office and classroom space usually reserved for students with disabilities who use the area for taking exams.

Because of the limited working area, additional office space has been requested by the coordinator of Disabled Student Services Harriet Clendenen.

This quarter there are approximately 65 more students with disabilities using the facilities than last spring, totaling 411, and more than 600 tests given, said Clendenen.

There are five structural types of disabilities: mobility, learning, functional, visual and communication.

These students, especially those with visual and learning disabilities including problems with reading, need a place more conducive to test taking than they have now.

The learning centers have increased in population and some of these students, as well as others, may need a longer time to write an answer or may need complete concentration when taking a required exam.

Biological sciences major Jonathan Rollins has dyslexia and sometimes has trouble seeing written words in the proper order. Although he uses the computers in the disabled office to write English papers, he said he would prefer to take exams in a quiet area. Some students may also need special equipment to aid them when taking subject matter tests. When students are moved around from room to room it may lead to confusion and eventually even hinder their grade potential.

Editor of Disabled Student Services Jennifer Schlofield said some students have trouble writing and when they look at a word they might not realize that the word is spelled wrong. She added when students are taking exams the rest of the students or faculty are not supposed to use the computers and this causes delays.

Lately, students are taking exams in almost any room that is vacant. The Health Center, conference rooms, empty classrooms, offices, or meeting rooms in the U.U. have all been used, said Clendenen.

ASI President Stan Van Vlck plans to bring the space problem up with the Student Senate and develop a committee to look into other alternatives.

Van Vlck said the state should be responsible for supplying the service, but said right now ASI provides free space.

Although Clendenen said they are looking for more work space.

**Barrier-free society concern to architects**

By Lynne Hasselman

To someone in a wheelchair, even a relatively insignificant task of opening a classroom door can require a great deal of maneuvering and effort. Designing buildings to be accessible to the disabled, including the elderly and pregnant, has become one of architects' leading concerns.

"Designing a building to have equal access to the disabled presents its own group of problems," said architect Peter Jones, who just completed a housing development for the handicapped. "It is a lot more expensive for one thing. Buildings must be equipped with a ramp, which can be very difficult to construct.

**New train rails are being placed along the railroad tracks in San Luis Obispo, and the work stopped traffic early Tuesday morning. The renovation is expected to be completed in January or February.**
The NCAA: a referee with a chemistry set

Three weeks ago, a court ruling opened the door to a career or death for 15 players: a preliminary injunction allowing them to compete in intercollegiate sports without submitting to drug tests. The ruling eliminated a lawsuit by Stanford on behalf of two athletes: football backer Barry McKeever and women's soccer player Jennifer Hill.

The mixed nature of the decision may well be the last challenge to the NCAA. While the ruling affects intercollegiate sports without mandatory drug testing was apparently based on the fact that the testing was improper in all cases. It was also stung last year when a superstar Brian Bosworth tested positive — for steroids and cocaine — were in these two sports.

Some Cuban prison rioters kept in Lompoc penitentiary

LOMPOC (AP) — Some of the Cuban inmates who rioted at a Louisiana prison were behind bars Tuesday at the Lompoc federal penitentiary, housed in two-man cells amid tight security, an assistant to the warden said.

The 101 inmates arrived at the Lompoc Federal Penitentiary in Lompoc, 140 miles northwest of Los Angeles, late Monday after landing at nearby Vandenberg Air Force Base aboard a special jetliner, said spokesman Chuck LaRoe.

"Everything so far has gone very routinely," LaRoe said. "I think they were just glad to have a hot meal waiting for them."

The inmates were served roast beef sandwiches upon their arrival, and were later fed a complete dinner of beef stew, salad and fruit, LaRoe said.

The new inmates, which bring the prison population to 1,380, were housed in the prison's maximum security Administrative Detention Unit, a cellblock separate from Lompoc's general population.

"We don't have much information on them," LaRoe said, adding most of the inmates sent to the California prison "are immigration detainees."

There has been little reaction from the 31,000 residents of Lompoc, he said.

"We had one phone call expressing that they would like to have them stay in Lompoc," LaRoe said.

The Cuban inmates will remain locked up in the two-man cells and permitted outside only five days a week for one-hour exercise periods. The Lompoc prison has a fenced recreation area where prisoners can play basketball, among other things, LaRoe said.

Government will announce ozone protection regulations

WASHINGTON (AP) — The government plans to announce on Tuesday its regulations limiting the use of two chemicals believed to be depleting the atmospheric ozone layer, which shields against cancer-causing ultraviolet rays.

The regulations governing chlorofluorocarbons and halons aim at meeting quotas set in an international agreement reached in September in Montreal.

The major nations agreed to cut CFC emissions 20 percent from 1986 levels by 1994 and 90 percent by 1999. The use of halons will be frozen at 1986 levels through 1999, with no rollback.

According to a report in Tuesday's edition of The New York Times, the EPA would allocate quotas for the introduction and consumption of the chemicals to companies making and using them in 1986. The companies would be permitted to trade their allocated quotas. Export and import levels of the chemicals would also be controlled, the newspaper said.

Five companies make CFCs, which are used in the producing plastic foams, filling automobile air conditioners and cleaning computer chips.

The EPA was under a court order to decide by Tuesday whether to regulate CFCs. The Natural Resources Defense Council, a private environmental group, had filed the lawsuit.

EPA Administrator Lee Thomas has scheduled a news conference Tuesday to announce the regulations.

The EPA had indicated earlier this month that it was leaning toward a market approach to reducing CFCs. The Natural Resources Defense Counsel, a private environmental group, had filed the lawsuit.

The Hardest Thing I Didn't Have to Do Alone.

I thought cocaine was one of life's little rewards. Then, it became my life.

Who'd ever think a little line of coke would go from recreational use to wreaking havoc with your life: finances, career, family, friends and health. Physical signs may include pains, constantly running nose, seizures and insomnia.

Coke abuse is making addicts of America's finest. It's not an isolated drug of youthful experimentation or urban blight. It's in your community—your schools, your boardroom, maybe in your life.

Questions about cocaine? Call us. We'll answer confidentially and carefully. Be member, kicking cocaine is something no one needs to do alone. We can help you or someone you know regain control of life.

Overnight Camera Work

Leading Chinese Communist works to change poor image

BEIJING (AP) — Tickling babies and adoring peasants' flocks of ducks usually aren't part of the job of a Communist Party chief in China.

But Zhao Ziyang has been doing both with aplomb as he works to cement his image as an energetic, well-informed leader more accessible to the masses than his predecessors.

The image is important, not just for foreign consumption but also for galvanizing China's campaign-wary population to support ambitious modernization plans.

Last week's national television news showed Zhao touring a remote area of southeastern China's Jiangxi province to investigate the residents' living standards and the impact of the nation's 9-year-old retreat from communes and central planning.

"I see that the people of this area are full of life," a television report quoted him as saying. "The clothes they wear are not bad and they look robust.

Sitting as a wooden table in a peasant's home, he reached out and tickled the cheek of a small child. The child did not react.

It is too soon to say how millions of TV-watching Chinese will react to Zhao's leadership style. Beijing residents interviewed after his ascension to the Communist Party leadership on Nov. 2 greeted that event with an indifference born of nearly four decades of authoritarian rule by distant, secrecy-shrouded leaders.

With this apathy in mind, official have begun to stress holding "dialogues" between the public and authorities on all levels. In recent weeks, the state-run newspapers have reported open meetings held by governors and mayors in several provinces and major cities.
Electron microscope breaks through cell walls

By Diane Wright
Staff Writer

The electron microscope suite in Fisher Science Building has equipment allowing students to process tissues to see inside cells and closely examine cell surface area.

The suite has a room for preparing grids, two electron microscope rooms, a scanning microscope room and two dark rooms for developing and enlarging photographs of samples.

The scanning electron microscope allows the surface of cells to be examined. Spores can be seen. With the high transmission electron microscope, the inside of cells can be closely examined. The nucleolus inside the nucleus and the chromosomes are visible.

Elizabeth K. Perryman's team teaches electron microscopy classes in the suite with Lee Parker. Perryman said some of the other universities in California have electron microscope facilities but at large research institutions the equipment is not available to undergraduates.

"We are fortunate to have it available to undergraduate students," Perryman said. She added former students going to other universities for masters' degrees discovered students from other universities did not know microscopy techniques.

Perryman said one of her former students is now an anatomy faculty member in the medical school at the University of Arizona in Tucson.

Three courses in electron microscopy are offered. The courses were listed as experimental courses in the class schedule. Beginning next quarter, though, the courses will no longer be classified as experimental.

Perryman said each class has a maximum of 15 students. "They get very individual attention," she said.

Current students in electron microscopy examined coal, rust, pituitary glands, heart muscles and fibers. Perryman said that at the beginning of the course students are given items to examine and later in the quarter students can choose their own samples.

The electron microscopes can be used for senior projects; however, Perryman said, "If a student wants to do a project, he has to take the course to learn the skills."

Perryman said students learn a technique specific to electron microscopes. Tissues are cut with glass knives and placed on a grid in a circular container, not on a slide. While the sample is in the electron microscope, black and white pictures are taken. The photographs are further enlarged when they are developed.

Electron microscopy can determine if cells are diseased. Microscopy is used to diagnose kidney disease at hospitals. Plant diseases can also be detected.

Perryman said the scanning electron microscope magnifies about 750 times. The transmission microscope magnifies 10,000 to 150,000 times. "It doesn't mean it's better, just different," said Perryman.

The suite was designed in 1978 and opened in 1979. Perryman participated in designing the lab. She said in 1979 the electron microscope cost around $98,000.

"If we had to replace it now, it would cost about $215,000," said Perryman.

Mustang Daily
Quadriplegic student breaks barriers with education

Bryan Gingg is a 23-year-old junior social science major at Cal Poly. He is an avid sports fan, especially of Raiders football and Angels baseball. He enjoys movies, sightseeing and traveling. The other time I spend at school, it seems like 99 percent of the time is in schoolwork," he laughed.

School is a little more challenging for him because just getting to class is difficult. "My wheelchair is bigger than the desk, and the aisles are 99 percent of the time is schoolwork," he laughed.

A lot of people see me and say, 'Gee, that's a bumper,' but I have a lot more mobility (than when I was on the respirator) and I can go places," Gingg said. "I am grateful for what I can do, and I appreciate the chance to go back to school,'" Gingg, who has been at Cal Poly for three years. Because he can't move his head, he has netherakers attend classes with him or has someone in class take notes for him. "I miss not being able to take my own notes," he said. "The actual writing is the start of memorizing. But when H can't make it to class, I know that someone will be taking notes for me." Another thing he misses is being able to highlight books in his own book. "When he's working with his mouthstick, he doesn't have a special highlighting marker tip, and he can't turn the pages and highlight the text at the same time.

"I buy highlighted books at the bookstore, I ask someone to highlight my book where they leave mining," he said. Taking tests requires more than showing up to class with a Scantron sheet as well. "I never show up on test days. Some examples think I never take them," he said. He takes his tests at Disabled Student Services and dictates his answers.

One of Gingg's professors said he doesn't change class structure to accommodate him. "He helps me more than I help him," said Bill Preston, social science associate professor. "I watch myself to make sure I'm organized, and I try to emphasize clarity. I can look to him to see if I'm making sense," said Preston.

"It's not done condescendingly, because I know (being clear) helps the other students understand. "Since I know he's not taking notes, it's a strong reminder to me that I need to be clear. While the other students are working in class on homework, (Gingg) has to do everything mentally," said Preston.

Gingg can write with a mouthstick that he has in his hands. It is a long pole with interchangeable tips. One is an erasable ball-point pen, another is an eraser for removing the ink, turning pages of a book or moving papers on his desk. He writes some of his homework, dictates some and types some into his computer. By using his mouthstick with the eraser tip, he is able to type 10 words a minute with the "hunt and peck" method. Sometimes his roommate, friends or Disabled Student Services staff type his dictated papers.

Gingg's computer will soon have a special voice recognition feature that will enable him to speak a command and have it appear on the screen. That command word will be used with other keys to produce extra computer functions. For example, Gingg can say "control" and it will appear on the screen. Then he can push any key with his mouthstick. This enables Gingg to use computer formatting keys, etc., instead of just using it as a typewriter.

He heard about the special computer after he was out of the hospital during his rehabilitation. "It has been around for a few years, but it is limited in area and use," he said. His system will probably be ready for use in two to three weeks.

Gingg uses his telephone by using his mouthstick to turn on the speaker, a common feature in many new phones. He can also turn on the television and stereo with the remote control.

Getting in and around campus takes more work than most students are used to. Gingg sits in a motorized wheelchair that he guides with his chin. "I can get into most buildings, but sometimes I have to get the back way," he said. Also, because he can't use his arms, he must wait for someone to open doors for him. "I go at prime times — rush hour, between classes," Gingg said. "But, I've gotten stuck a few times without someone to help."

"Most students will open doors, move chairs," etc., he said. Sometimes he has to ask people to hold his feet if he changes the angle of the back of his chair to increase his circulation. He said he usually looks around for a friend, or at least a familiar face, but if no one is around he must ask a stranger for help.

"No one's ever said, "No, I won't help,"" he said. To change the angle of his chair, he has a strap connected to the chin piece. He puts on the strap to lay back, and pulls on the strap to come up. His wheelchair is battery powered and must be recharged nightly. "Going up the hills can be hard, and the batteries can run out," he said. "The chair's broken twice or three times at school.

"As of Sunday night, the motor in Gingg's chair was broken, and it will have to go to Los Angeles to be repaired. A few days before that, he left his specially equipped van broke and also had to be repaired in Los Angeles.

"No local place can get it fixed, so I have to wait," he said. Gingg has someone to drive his van for him.

Since he can't lean out of bed, pull on some sweats and race to class, Gingg has to carefully plan his schedule.

"I need help getting up, so it takes me about an hour and a half to two hours to get up and get dressed in the morning," he said. He usually doesn't take classes until after 9:30 a.m.

Even the weather can sometimes make it hard for him to get around. "The (winter) cold makes it hard — it's hard for me to warm up," he said. His skin can't control heat, and he can't be in water above 90 degrees.

Until six months ago, Gingg lived with his parents in Los Osos. "It took me three months to find an apartment wide enough and one that we didn't have to do major construction on so he could move around comfortably," said Gingg. Ging has a roommate who does the cooking and helps him with his daily routine and schoolwork.

One of the hardest things he had to overcome after the accident was role reversal, such as driving. "It was tricky, being the more passive role." Right after his accident, doctors told him that his chances for recovery weren't too good. "They told me I had a one in a million chance for my arms, and a zero in a million chance for my legs.

"But, I won't give up hope and I won't sit around and dwell on it," he said.

In the future, Gingg would like to go to graduate school and major in rehabilitation counseling. "It was interesting in theory, but now I'll probably work at some type of rehabilitation facility."
WASHINGTON (AP) — President Reagan said Monday the Soviet Union may be planning "a breakout" from the Anti-Ballistic Missile Treaty that the United States would be "totally and dangerously unprepared for" without his Star Wars missile defense plan.

Reagan made his statement in a speech to conservatives a week before his summit meeting with Soviet leader Mikhail Gorbachev in Washington. His remarks underscored Reagan's determination to push ahead with the Star Wars program despite objections from Moscow and congressional attempts to restrict it.

Administration officials have defended spending billions of dollars on Star Wars to offset what they say are comparable amounts the Soviets have spent in secret on their own missile defenses. U.S. officials fear that the Soviets might suddenly "break out" of the ABM treaty by deploying all over their nation large numbers of the type of anti-ballistic missiles the pact allows them to station near Moscow.

Gorbachev, in an interview broadcast by NBC News, acknowledged that the the Soviets are engaged "in research, basic research" similar to the Star Wars program, also known as the Strategic Defense Initiative. He said the Soviet Union "is doing all that the United States is doing" to defend against nuclear attack.

However, he said, "We will not build an SDI. We will not deploy SDI and we call upon the United States to act likewise. If the Americans fail to heed that call, we will find a response."

The White House had no comment on Gorbachev's interview. However, tentative plans are being made for Reagan to be interviewed by network anchors, perhaps as early as Thursday but possibly later, to set the stage for the summit.

Gorbachev is expected to end the summit with a news conference. Reagan will not hold a news conference, Fitzwater said, but he is expected to give a speech.
Three Cal Poly students are growing 2,000 poinsettias as an enterprise project at the ornamental horticulture unit and are also selling the plants.

Wendy Robinson, Robert Lance and T.J. Cape began working on the nine-month project last March. The students said each of them spends an average of 40 hours a week caring for the poinsettias.

Robinson said it is an opportunity to use the information learned in class. “It’s been rewarding and personally fulfilling.”

Faculty advisor Virginia Walter oversees the project, which is funded by the Foundation. The Foundation and the students receive percentages of the sale profits.

The students are growing 10 varieties of poinsettias. Besides the common red leafed variety, poinsettias with white and pink leaves are also being grown. Unusual poinsettias include a variety called red marble that has leaves with white edges and pink centers and the jingle variety that has red leaves with splashes of pink.

“Our learning would be really limited if we grew only reds,” said Robinson. She said the number grown of a particular variety was determined by estimating the market demand and evaluating the success of past projects.

The plants range in size from 18 to 48 inches. There are different sizes of potted plants as well as hanging baskets and plants in tree form.

Robinson said poinsettias are fickle plants. The plants require exact conditions to flower. The natural time for poinsettias to flower is in December because daylight is shorter.

Sturdy dark plastic sheets are used to cover the greenhouse windows for the proper amount of time to encourage the plants to bloom. Robinson said chemicals are used to control the height of the plants.

Robinson said original cuttings of poinsettias were bought from a large plant firm in San Diego to make a mother stock. In August cuttings were taken from the mother stock to grow individual plants.

The poinsettia is native to Mexico and the Aztecs considered the plant to be a symbol of purity. Indians used the red leaves to make a medicinal preparation to combat fever.

In the 17th century a group of Franciscan priests used the poinsettia in a nativity procession called the Fiesta de Santa Pesebre, which was its first use as a Christmas flower.

Students can walk through the greenhouses to see plants between 9 a.m. and 4 p.m. Plants can be purchased between 12 and 4 p.m. at Poly Plant and Florist.

Cape said prices range from $4 for a plant in a 4-inch pot to $40 for a 4-foot tree. Orders can be placed and students deliver the plants locally. The ornamental horticulture unit is located on the hill past the Campus Store and parking lots on Via Cana Street.

The poinsettias will also be sold at the U.U. Plaza through Wednesday, Dec. 2.

Dale Friday politely picks a pretty poinsettia in the U.U. Christmas Sale.

As our gift to you, El Corral Bookstore will deduct 20% from the price of selected merchandise during the Annual Christmas Sale.

Discounted 20% for the sale will be Christmas Gifts, Gift Books, School Supplies, Stationary, Art, Craft and Technical Equipment, Photo Supplies, Gift Wrap, Greeting Cards, Calendars, Clothing, Jewelry and many more items from our regular stock. Also save an additional 20% from the already discounted price of all our Hardbound Best Seller, Leisure and Reference Books in the General Book Department.

Hurry for best selection as this sale is limited to existing stock.

Save 20% - 40% December 7-11
Reagan says arms control needed with Soviets; criticizes detente

JACKSONVILLE, Fla. (AP) — President Reagan pledged on Tuesday to “keep right on marching” toward further arms agreements after new Soviet leader Mikhail Gorbachev’s announcement of detente allowing a secret Soviet missile buildup.

Less than a week before his summit meeting with Soviet leader Mikhail Gorbachev, Reagan had harsh words for that period of broadly improved relations with the Soviet Union.

“More than a decade ago, there was a warming in U.S.-Soviet affairs that we called ‘detente.’ But while talking friendship, the Soviets worked even faster on the largest military buildup in world history. They stepped up their aggression around the world. They became more repressive at home. We do not want more words. This time we’re after peace,” Reagan said.

“In the excitement of the summit, the treaty signing and all the rest, we must not forget that peace means more than arms reduction,” he said.

In a speech to high school seniors and their parents in Jacksonville, Fla., Reagan said he and Gorbachev will “have words about Soviet expansionism” during their three days of meetings in Washington.

And he told one of the students during a question-and-answer session later that in his talks with Gorbachev he might find himself “bending his ear” on what Reagan said was a need for religious freedom and other reforms in the Soviet Union.

One student also asked Reagan to defend his “Star Wars” space-based missile defense plan, prompting the president to compare it to “a gigantic gas mask.”

Reagan recalled that gas masks were retained after poison gas was outlawed. The Strategic Defense Initiative, he said, was “a gigantic gas mask and maybe the thing that could bring about the end of nuclear missiles.”

The president made no reference in his speech to Gorbachev’s hour-long NBC television interview on Monday night.

Asked what he thought of the Soviet leader’s presentation, Reagan said, “I have had a respect for him ever since I met him.”

When one student asked if Reagan was worried that Gorbachev’s apparent popularity in the West would make the American people more receptive to communism, the president replied, “I have more faith in the American people than that.”

As for his own feelings, Reagan said, “I don’t resent his popularity or anything else.” The president, referring to his days as an actor, joked, “Good Lord, I co-starred with Errol Flynn once.”

When another student asked the president what advice he would like to give to Gorbachev, Reagan replied, “To really stick to his program of glasnost,” or more openness in society, and “to make their country like ours — a place that people don’t want to leave.”

Of particular importance, he said, would be “when the day comes that the people of the Soviet Union can worship God in peace.”

Reagan said arms control needed with Soviets; criticizes detente
NEGOTIATORS ARE GETTING CLOSER TO AGREEMENT WITH CUBANS

ATLANTA (AP) — Negotiators for 1,110 Cuban inmates holding hostages at a federal prison reached "substantial agreement" with government representatives Tuesday on a number of issues, a government spokesman said.

A one-hour negotiating session was "considerably more encouraging than others we have had over the last few days," the department said in a statement.

DETENTE

The inmate leaders took the proposals to the rest of the detainees, who are fighting plans to deport them back to Cuba, and another negotiating session was scheduled for later in the day, the department said.

Patrick Korren, deputy director of public affairs for the U.S. Justice Department, said the "very businesslike" negotiations with four inmate representatives seemed to indicate that a dissent minority did not have as much sway in the negotiating process Tuesday as they have had in the past.

"This one (session) did not have the grandstanding and role-playing" by inmate negotiators that marked previous talks, Korren said. He declined to elaborate.

He stressed that federal negotiators did not know if the inmates' influence had waned enough for an agreement to be reached.

Earlier Tuesday, federal officials had said a Cuban-born Catholic bishop who helped end the prison siege in Louisiana was willing to help in negotiations with the men who burned three buildings and took 90 prison workers hostage after taking over the prison Nov. 23.

A videotaped message from Roman has been credited with ending an eight-day siege Sunday at the federal detention center.

Buy a printer with your Macintosh and conserve paper.

A Macintosh personal computer and an ImageWriter II printer will save you hours of time. Not to mention gallons of correction fluid and reams of paper. And, if you buy both now, the first ream of paper you'll save will have a lovely green glow with President on it. So here's the deal: You'll save a bundle of cash when you purchase an ImageWriter II printer along with your choice of a Macintosh Plus or a Macintosh SE. Either way you'll be able to turn out beautifully prepared papers. And we'll even try to help you with a variety of financing options. We feel compelled to tell you, though, that a deal like this can't last forever. So it's a good idea to see your campus microcomputer center today. And join the paper conservation movement.

The power to be your best.
FIND OUT WHY MORE CAL POLY STUDENTS CHOOSE TO LIVE AT

Mustang Village has Winter-Spring Leases available as well as immediate openings in:

**MUSTANG VILLAGE II STUDIOS**
These most desirable new models give the students maximum privacy. Some have balconies that overlook a beautiful wooded creek. All studios have full kitchens and baths and are fully furnished. The plan affords maximum independent living for one or two persons.

**MUSTANG VILLAGE II 2 BEDROOM UNITS**
The ideal model for two to four people! This new area of Mustang Village features full kitchens, one and two baths and a wonderful floor plan designed for the student who enjoys being around others without giving up their open space.

**MUSTANG VILLAGE I 2 BEDROOM TOWNHouses**
The luxury of a two-story townhouse affords residents a separation of their living and sleeping quarters. These spacious units have full kitchens, 1½ baths, are fully furnished and offer a house-like atmosphere.

**MOVE IN ANYTIME AFTER DEC. 1 AND BE SET FOR NEXT QUARTER PLUS SAVE UP TO $360 ON A SIX MONTH LEASE.**

Advantages to Living at Mustang Village!
- The Closest Student Housing to Cal Poly- Closer to many buildings than the dorms- no need for campus parking permit, or even a bicycle. Mustang Village borders the west campus for a 1/2 mile.
- Largest Private Park and Grounds- Mustang Village has more than just buildings and parking lots! We offer a large park and barbecue area set between 2 wooded creeks- the only private open space near campus. And many of our studio units offer a fine view of this area.
- All Reserved Parking- Your Mustang Village parking permit is more than just a "hunting license." Each tenant has a numbered, reserved space, and reserved guest parking is even available. Never again will you come home at 2am to find the lot full.
- 24 Hour Security- 24 hour on-site security is provided and is available by phone for any problems.
- 5 Modern Laundry Facilities- Clean, new machines, 75c wash, 25c dry located throughout the complex.
- Year Round Heated Pool
- New Microwave Ovens In Every Apartment

Even if you wouldn’t consider living in a student housing complex-consider...Mustang Village Studio Apartments! Students and working professionals alike have found refuge from noise, parking problems, roommate hassles and the general lack of quality studio apartments in SLO at Mustang Village. Mustang Village studios are physically separate from the rest of the apartments, and are in the most scenic and desirable area. Come by and take a tour.

New mixtures claim to give added energy and more brain power

By James Welch

The use of stimulants (caffeine, No-Doz, amphetamines) to prevent or reduce sleepiness is prevalent among college students. Their use is generally intensified during final examination periods.

The use of stimulants is not without its drawbacks. Some people feel they have the answer in hand but their minds are not working properly.

Bob Wells, of Health and Pleasure Products Inc., is selling an energy solution and a mind ability solution. Both tinctures are concocted from various herbs, roots and other extracts that are at least part of older cultures for generations.

DISABLED

From page 1

dine into the design because it takes up so much room, and any two-story building must also have at least one door which usually runs about $30,000 a piece.

Enclosure doors for the handicapped must be wider than normal and be equipped with special door handles.

Many of us in wheelchairs end up having to use our chair as a bannister ram just to keep the deficits to a minimum," said Beth Currier, who has been in a wheelchair for the age of 12.

"Heavy glass doors also can be a problem," she said, "and there is almost always a chance you may shatter the glass as you are trying to get it open.

Architects also take the handicapped into consideration when designing parking garages.

'You have to have handicapped parking spaces, and this is especially difficult when you are designing a parking garage," said Jones. "You have to make the garage wide enough, and to do this, you have to dig the garage an extra two feet in order to place the designated parking spaces near the entrance. The problem is, the person doesn't have to go behind the cars to find a parking space.

"You take your life into your own hands if you go behind a pernicious mental illness," said Currier. "When I was younger, I had to hover over wet sidewalks until I was close to the U.U. and across from El Cathedral Bookstore, "is a prize for the best Christmas display in Obispo."

The use of stimulants (caffeine, No-Doz, amphetamines) to prevent or reduce sleepiness is prevalent among college students. Their use is generally intensified during final examination periods.

Bob Wells, of Health and Pleasure Products Inc., is selling an energy solution and a mind ability solution. Both tinctures are concocted from various herbs, roots and other extracts that are at least part of older cultures for generations.

The energy solution is made of three types of ginseng, licorice, astragalus, black cherry concentrate, caffeine and 3 percent alcohol. It is intended to energize the body and mind by nourishing the energy producing glands.

In contrast, caffeine, No-Doz and amphetamines clearly drain the glands at an accelerated rate.

But incentive energy cannot completely replace the effects of good nutrition, exercise and sleep. If a person uses it when it is tired, drained or out of shape the incentive will generally provide a quick pick-up. But then it may leave a person worn down.

When used in moderation and in a balanced lifestyle (which requires some degree of self-awareness and self-acceptance) the energy solution is meant to use to this building," Wolff added.

Another problem encountered by those in wheelchairs is bathroom accessibility. Bathrooms in all new buildings must have a wider stall, and higher toilet with metal railings.

Most bathrooms on campus are at least minimally modified for the handicapped — that means they have removed the stall door and side panel next to the wall to gain another 30 inches, and hung a shower curtain over the entrance said Currier.

"I've gone into the bathroom in the University Union before and someone has placed the trash receptacle right in my line of access," she said. "People who aren't disabled just don't think."

Currier has visited more than 13 state university campuses and said Poly was one of the best in terms of accessibility.

"Cal Poly has spent over $1 million in making the campus barrier-free," said Currier. "We now have elevators in all two-story buildings on campus, a good nutrition, exercise and rest.

The energy formula contains a contrast to normal levels of expression and experience. But then some may find the mental solution is a good catalyst to combine energies and talents. It may surprise many by il- luminating the awareness, the mind so during an unusually deep well themselves up to the University. They are usually pretty tired by the time they get here.

"When you are in a wheelchair, anything can affect you," said Currier. "The texture of the entourage, the gradient, or dirty or wet sidewalks can all combine to slide you right into the gutter."

Currier said students with disabilities also have problems with people taking the handicapped emblems.

"People pull off the emblems on bathroom doors so those who are disabled can't tell which stall they can use, they pull off the braille in the elevators and steal the handicapped parking signs." Currier has visited more than 13 state university campuses and said Poly was one of the best in terms of accessibility.

"Cal Poly has spent over $1 million in making the campus barrier-free," said Currier. "We now have elevators in all two-story buildings on campus, a good nutrition, exercise and rest.

"God is not going to take the rap for evolution"

Archaeologist says Bible can stand alone as accurate historical record

By Lawrence Anton

Stepping up to the lectern and into the glare of a single spotlight, Biblical archaeologist Bill Baker said, "God is not going to take the rap for evolution," to nearly 500 people last week in Chumash Auditorium.

And so continues the debate sparked in 1859 with the publication of Charles Darwin's "On the Origin of Species." Baker is the executive director of the Christian Coalition in Las Vegas, Nev., an organization "dedicated to demonstrating the historical reliability and credibility of the Bible." He was speaking as part of the ASI Speaker's Forum, which is a campus reformat for the discussion of current issues.

Titled "Biblical Creationism vs. Evolution," the lecture consisted of a slide-show presentation and a period during which Baker answered questions from the audience concerning evolution and creationism.

Supported by archaeological finds, the Bible can stand on its own as an accurate historical record, said Baker, whose archaeological specialty is tomb excavation and who has participated in numerous digs in the Middle East.

Baker said recent findings support the Biblical stories of Sodom and Gomorrah, the two cities in the plain of Jordan destroyed by God to fit their wickedness, and the Great Flood as well as the rule of Pontius Pilate as governor of Judea at the time of the Crucifixion.

"Archaeology is not in the business of proving the Bible or disproving it," Baker said, but archaeological evidence has shown that the "Bible is extremely accurate."

Biblical Authority.

Baker is a Jehovah's Witness and has planned to have Baker and Cal Poly anthropologist professor Patrick McKim debate evolution. But after listening to a tape recording last summer of Baker's presentation, McKim declined to participate.

Baker has written several books including "Thief of a Nation," "Thr/ Kingdom Court," and "Capital Punishment and

"Archaeology is not in the business of proving the Bible or disproving it," Baker said, but archaeological evidence has shown that the "Bible is extremely accurate."

"I got the impression (McKim) was scared out of his wits," Baker said. "I heard of Baker before being asked to debate him. And after hearing the tape, he was concluded that the man was an abject failure at his ignorance.

"Mr. Baker didn't even have an elementary knowledge of evolution," said McKim. McKim attended the speech last week and said it was full of factual inaccuracies concerning evolution.

Baker faulted Baker for saying the Piltdown Man, once hailed as the missing link but later proven to be a hoax, "He never had to come to Paris when actually it has good dates as the British Museum of Natural History.

Also, McKim said Baker's contention that Peking Man, said to be one of the earliest forms of man, was reconstructed by many scientists and was a crock. "It was the discovery of a single tooth in a Beijing drug store that led to a case where many artifacts were uncovered," McKim said.

Baker talked about the fossil record as though it were the only evidence for evolution, McKim said. Yet the crucial evidence for evolution comes from living organisms, McKim said.

"These are facts that are available to anyone who does just a little homework," McKim said. "This guy (Baker) hasn't done any homework."

Observers blame army for riot; Haitian candidates vow boycott

PORT-AU-PRINCE, Haiti (AP) - The Haitian army has stepped up its campaign to crush the democratic movement in Haiti, leading to fears that the U.S.-backed army coalition is calling for elections for the first time since 1986.

As the polls opened Sunday, the army said it had killed and wounded more than 250 people with machine guns and soldiers set fire to opposition headquarters, burned the Haitian government's electoral office and several thousand of its supporters were arrested.

Independent election observers said 16 candidates have been arrested in connection with organizing the vote.

Election observers, who have been monitoring the campaign, said Sunday that the army has been responsible for the election turmoil.

"The army is not in favor of multinational intervention," said McKim. McKim attended the speech last week and said it was full of factual inaccuracies concerning evolution.

Baker faulted Baker for saying the Piltdown Man, once hailed as the missing link but later proven to be a hoax, "He never had to come to Paris when actually it has good dates as the British Museum of Natural History.

Chances for free election slim as violence continues

PORT-AU-PRINCE, Haiti (AP) - Two leading presidential candidates on Monday rejected any elections organized by the army, saying they fear the unlikely Haiti can salvage its constitutional democracy in 30 years.

A third candidate virtually ruled out his participation in any elections organized by the army, saying they fear the unlikely Haiti can salvage its constitutional democracy in 30 years.

One candidate, Mafci Martelly, leader of the Christian Democratic Party, said he and his team were shot at twice Sunday by gunners as soldiers watched without responding.

"There is a great consensus among the Haitian people and leaders that freedom, elections and democracy are solutions that can bring Haiti to the polls. But if the army intervenes, there is no election," said Martelly.

Election observer Robert E. White, a former U.S. ambassador to El Salvador, told reporters Sunday that the army was governing Haiti, and that the elections could not be held.

"I reject without hesitation as false the accusation that we extended our rights, violated the constitution and invited the United States on a plane chartered by the Organization of American States to step down," said Martelly.

In other developments, the Organization of American States said Monday that it had halted plans for the first free balloting since 1957, when Duvalier began virtually ruling the country.

In recent developments, the Dominican Republic closed its borders to Haitians because of the unrest. A Dominican air force plane was shot down by a Dominican military reporter and anyone else who wanted to leave, said the country's foreign minister.

"No elections are possible under such a regime. They're the ones shooting people," said Sylvio Caille, a presidential candidate and founder of the Christian Democratic Party.

Another candidate, Macl Jean, leader of the Movement for the Installation of Democracy in Haiti, demanded that elections be run by the Provisional Electoral Council, according to his press secretary, Leslie Paer.

After dissolving the council, Jean asked thecreature to table the debate, adding that the likelihood Haiti could salvage its constitutional democracy in 30 years.

A third candidate, Louis Dejean, leader of the National Agricultural and Industrial Cooperative Party, said his party would not participate in "a new government that cannot be inaugurated next Feb. 7, as scheduled."

"We have no elections under such a regime. They're the ones shooting people," said Sylvio Caille, a presidential candidate and founder of the Christian Democratic Party.

Poly rolls to state championship
Lady Mustangs hold opposition scoreless in five games

Although it was seeded second in the state tournament, the Cal Poly soccer club felt it was the best team there.

The Lady Mustangs proved it by overwhelming the competition to win the state championship Nov. 22 in Long Beach.

"We knew we were the best team there, even though previous situations hadn't proven that," said assistant coach Mike Huber.

Cal Poly came in with a record of 8-2. Both losses were to top-seeded U.C.L.A. of 8-2. Both losses were to top-

said assistant coach Mike Huber.

San Diego State, 1-0, in the final.

WRESTLING
Cowart (158), Eric Osborne (167) and Robert Tabarez (126 pounds), were the Lady Mustangs' top three scorers.

Although it was seeded second in the state tournament, the Lady Mustangs' chances were slim. The Lady Mustangs' top three scorers were the key to their success.

The Mustangs' 201-pounder, Tami Schoniger, scored the lone goal, and the defense made it stand up.

"We knew the five goal would win the game," said Huber. "The two best goalies in the tournament were in that game, so it was going to be tough to score."

There was a hint of deja vu in the game. Earlier this month, Schoniger scored both goals as Cal Poly defeated San Diego, 2-0.

The Lady Mustangs proved throughout the round robin tournament that they were tough to score upon. To get to the final, they whipped U.C. Riverside, 4-0, and U.S.C. 4-0. After tying San Diego, 0-0, they rolled past U.C.L.A. in the semfinals, 3-0.

"The U.C.L.A. game was probably our best of the year," Huber said. "We had two starters hurt, and the bench players did an excellent job."

Goalkeeper Andy Schoppa was named to the all-tournament first team, along with Janet Van Soest, Joanne Huggins and Lisa Naess. They were the key to the Lady Mustangs' chances. His shot at the buzzer was the final basket.

SACRAMENTO — If the early returns are accurate, Coby Naess' year as a redshirt seems to have paid off. The freshman forward, who sat out last season, scored a team-high 20 points against Sacramento State Monday night.

However, his effort was not enough to put the Cal Poly basketball team over the top as Sacramento held off the Mustangs' late charge to pull out a 77-75 victory.

Naess got 15 of his points in the second half, helping the Mustangs turn a seven-point halftime deficit into a 71-71 tie.

But Naess was quiet from there, and the rally sputtered.

Sacramento's Sean McClendon nailed a turnaround jumper, and Chris Farr and Alex Williams hit free throws to make it 76-71. Cal Poly's long-distance savior, Mark Otta, then missed a pair of three pointers. Seconds later, he fouled out.

A Mark Shelby layup brought it to 78-71. But a Williams free throw made it a four-point gap with 10 seconds left. Shelby then went to the line with a chance to cut the lead to two, but missed the front end of a one-and-one, dimming the Mustangs' chances. His shot at the buzzer was the final basket.

Mustangs hit road for NCAA playoffs

The Cal Poly volleyball team has earned a berth in the NCAA tournament for the eighth straight year. However, the Lady Mustangs’ bid to host a first-round match was rejected, and they will have to face U.C. Santa Barbara on the road Saturday. The match will start at 7:30 p.m. in Goleta’s Robertson Gym.

Hemmersbach named to all-PCAA team

The Pacific Coast Athletic Association named Cal Poly setter Claudia Hemmersbach to the all-conference second team.

The first team includes Cal State Long Beach’s Tara Cross, San Diego State’s An­gelica Jackson, Hawaii’s Terri Williams, U.C. Santa Barbara’s Judith Bellomo, and Pacific’s Liz Hert and Teri McNeil.

Cathey Scoclan of Pacific was named the outstanding freshman.

Poly assistant coaches given their release

Chris Sneland and John Crivello, assistant coaches for the Cal Poly football team, have been released.

Head coach Larry Seemsen recommended to Athletic Director Ken Walker that nei­ ther coach be offered a new contract when their current agreements expire Dec. 31.

Sneland, who coached defensive backs, and Crivello, who coached wide receivers, were the last remaining assis­ tants from Jim Sanderson’s tenure. Sanderson stepped down as head coach last year after five years at the helm.

Sneland, an all-American defensive back for Cal Poly in 1973, has been at Cal Poly six years and was a leading can­ didate to replace Sanderson. Crivello has been at Cal Poly for 18 years.

Quartetbanner Tom Sullivan, running back Mike Shaw, kicker Sean Pierce and punter Kevin Enigh moved into Cal Poly’s all-time top 10 in several statistical departments.

Sullivan, a junior who transferred from Sacramento City College this year, moved into the No. 3 spot for season passing yardage (1,705) and season total offense (4,706), and the No. 9 position for career passing yardage.

Survia, who transferred from Taft College, became the third-leading season scorer (78 points). His 13 touchdowns led him for the scoring lead in the Western Football Con­ference.

Pierce took the No. 5 position for season scoring (51 points).

Emigh, an all-American last year, moved into the top spot for career punts (231) and career average (40.1 yards).

MUSTANGS

Downhill, cross-country skiing for
class credit warms students' hearts
By Mary O'Loughlin
Special to the Daily
Cal Poly students can spend
weekend skiing in Bear Valley
Mountain Reba this winter for class
credit.
The physical education department has added PE 165, a variable unit course on downhill and cross-country
sections.
The course consists of two, two­week-on-class ses­sions on equipment and theory, and a weekend trip. Each section can accommodate 40 students. The course is basically designed for beginners, said Mark Phipps, one of the course instructors, but "I'd like to have some beginners and some inter­mediate skiers."
Richard Head, physical educa­tion department head, said, "We've wanted to offer an in­sitional course in skiing for a couple of years now. We just needed a faculty member that is qualified to teach it.
The course costs $70 for downhill and $145 for cross­country. The fee includes transportation and two days of food, clothing, lift tickets, instruction, and a lot of entertainment," according to Phipps.
Mike Swiderski, the other course instructor, and I are going to teach it and do some folk singing. It will give the students a little cultural experi­ence too. We want this to be a fun session as well as a learning experience.
This is Phipps' first quarter at Cal Poly as director of leisure studies, a position just added to the physical education department. "Everyone will probably wonder how the heck I know how to ski when there's no snow in England," Phipps said with his well-defined English accent.
"I don't know. It was a fun trip." When asked how the trip is going, Phipps said "something of a trip." Since then, he has skied in Spain, Italy, Australia, Scotland and several places in Europe, but not yet in California.
He was a ski-bum outdoors company in England for five years, and took his students to ski downhill. Last year, he directed the recreation and leisure studies program at Iowa State University. He also taught cross-country skiing at the Uni­versity of Minnesota, Mankato College and Concordia College.
Phipps holds a master's degree in experiential education, "so the concept of 'how to teach' is of real interest to me," he said.

One student killed, two injured in crash.

By Stewart McKenzie

Three Cal Poly students were hurt, one fatally, and two others were killed in a head-on car crash Nov. 24 on the way home to their Thanksgiving holiday.

The accident near Los Banos took the life of Gabriel Vargas, 18, a freshman electronic engineering student. Vargas was a native of Hughson and a Sierra Madre dorm resident.

"It pretty well affected the whole tower," said resident advisor Dave Havemann, Vargas' next-door neighbor.

His two passengers, students Guisberto Castro and Isidro Farias were listed in stable condition last night, according to a Doctors Medical Center spokesperson in Modesto. Both received neck injuries. Also killed were Joaquin and Carmen Gamino of Firebaugh, 46 and 43 years old respectively, according to the Merced County Coroner's office.

The accident occurred around 7 a.m. when Vargas and his two passengers were moving north at a high rate of speed on Highway 165 south of Los Banos, according to the CHP. Vargas was passing a slow-moving vehicle on the two-lane road when his Camino hit Gamino's southbound car.

Castro, 22, and Farias, 18, were both taken to Modesto in serious but stable condition but were moved down to fair and stable condition Tuesday morning.

They are expected to be released Saturday.

Castro, of Riverbank, is a freshman chemistry student living in Santa Luica dormitory. Farias is a freshman architecture student from Hughson, also living in Sierra Madre.
