New kids on the block ...

Tim Dolander hangs tough with three newborn kids and their proud mother, Thea. The pygmy goat family, which definitely has the right stuff, is shown here moving step by step through the entrance of its home on Cal Poly's sustainable farm.

Symposium to offer career help

As many as 100 companies will be present to give job information on Thursday in Chumash Auditorium. The event highlights Career Week.

By Anne McMahon  
Staff Writer

The place to be Thursday for soon-to-be grads and others interested in the job market is Chumash Auditorium. Representatives of as many as 100 companies, from Aeropost to Zellerbach, will be there from 10 a.m. to 3 p.m. for Cal Poly's 12th Annual Career Symposium. The event is one of the highlights of Career Week, scheduled for Feb. 20-26. The companies represent a wide variety of professional fields. Some have sent representatives to the symposium for several years, while others are attending for the first time.

Many of the company recruiters said in telephone interviews in early February that they have different reasons for attending the symposium. But they all agree that the event is popular, and the atmosphere is positive.

Author reads poetry from famed works

Patricia Allen  
Staff Writer

Poetry was looked upon as the king of the arts when Sheriey Williams was in high school. Being a child of migrant farm workers in Bakersfield, Williams never thought she could aspire to write poetry.

"It wasn't really until I got to college that I started to play around with poetry," Williams told about 90 people in Chumash Auditorium. Williams was a guest speaker on Feb. 14 as part of Cal Poly's WriterSpeak Series, funded by Cal Poly Arts. The program invites leading writers of fiction, nonfiction and poetry to speak.

Police catch alleged sorority house flasher

Sheriff's deputies arrest a Fresno man with a history of mental illness after two Poly sororities reported the prowler.

By Joe Tarica  
Staff Writer

A Fresno man with a history of mental illness was arrested Monday after exposing himself and peeping in windows at two Cal Poly sorority houses.

Donald Lynn Burgess Jr., 32, was charged with prowling, unlawful entry and indecent exposure. The charges were filed by members of Alpha Chi Omega and Zeta Tau Alpha sororities.

According to San Luis Obispo police, at about 12:30 p.m. residents of Alpha Chi who were sunbathing on their patio reported seeing a strange man wearing a white T-shirt and light blue jeans in their house at 1446 Foothill Blvd.

"Is this heaven?" asked a student as he walked through the gates.

"No," answered the farmer, "this is Tulare."

Last week, the California Farm Equipment Show was the place to be. In an effort to provide visitors a full spectrum of useful information, exhibitors from across the United States displayed the latest in agricultural technology, communications and chemicals. Students, farmers and people in the agricultural industry came to the show to kick tires and examine new machinery for their classes, ranches and farms.

For more on the show, see page 8.
Responsibility keeps dreams from becoming nightmares

By Matthew Calegari

The dream. We all have it. We all have a fantasy about what life would be like in our own personal Utopia. We would live in a place that is surrounded by trees, yet close to the ocean. Far enough away from the big city to escape the urban din, yet close enough to grasp its cultural flaire. Marin County is such a place. I was lucky enough to live in this ideal setting on the other side of the Golden Gate Bridge. So too was my cousin Joey.

I have vivid memories of growing up with Joey. He and I would endlessly splash around in his swimming pool every 4th of July. As nightfall approached we would drink pop and show nickels into his real-life pinball machine. Later in the night our parents would drive us to the County Fair where we would gaze wonderously at the exploding fireworks.

As-10-year-olds we lived in the perfect world. An upside Huck and Tom if you would.

As life progressed we grew up and Joey moved north to Sebastopol. In high school we saw each other at family gatherings and on holidays. Now I am in my final year of college and Joey is back in Martin County. Now he lives even closer to the Bay than I did! You see Joey lives at San Quentin Maximum Security Prison.

Joey drank too. Too much in fact. Directly behind the plant operations warehouse where you can drink beer or buy it.

The truly sad fact about Joey's accident is that we will have to wake up every day for the rest of his life and remember that he killed two people. For the moment all of his dreams are on hold as he stagnates in a prison cell. He feels the weight of the sun for a mere two hours out of each day.

For the sake of your future as well as for the preservation of your dreams, please remember Joey. And when you remember him at the next party you are at, hold the keg to your head and spend the night on the sofa, or call your roommate. If you don' t, then those two young people died in vain.

Don't let drinking and driving turn your dreams of the future into a nightmare. Have a nice day.

Iraqi official says war deaths surpass 20,000

NICOSIA, Cyprus (AP) — A senior Iraqi official says more than 20,000 Iraqis were killed and 60,000 wounded in the first 26 days of the Persian Gulf War, an Iranian newspaper reported Tuesday. It was Iraq's highest casualty estimate yet.

The state-run Tehran daily Jomhuri Islami said Iraq's deputy prime minister, Saoudoun Hammadi, reported the figures to Iran's first deputy foreign minister, Ali Mohammed Beharani, during talks last week.

The report did not say how many of the fatalities were soldiers and civilians, or indicate the statistical basis for Hammadi's figures.

IRA reminds British it can attack anywhere

LONDON (AP) — The Irish Republican Army bombing of Victoria Station has reminded the British that the IRA can randomly attack almost anywhere, as it did in the 1970s at pubs, shops and railroad stations.

Some analysts believe the intention is to subject London to the disruption and security checks that are part of life in Belfast, capital of the British province of Northern Ireland.

"In the IRA there's a feeling that events in Northern Ireland have been contained somehow and most British people dismiss news of things happening there," said Ian See WORLD, page 9

Maryland abortion bill signed into state law

ANNAPOLIS, Md. (AP) — Maryland's governor signed a law preserving a woman's right to an abortion even if the U.S. Supreme Court overturns its Roe vs. Wade decision. Antibortion activists promised to put the issue before voters.

Gov. William Donald Schaefer signed the bill Monday after the House approved it 84-59. The Senate passed it 25-18 on Feb. 11.

The bill was the focus of a yearlong legislative fight over pro-choice legislators' efforts to write into state law key elements of the 1973 Roe vs. Wade decision, which legalized abortion nationwide for the first time. The bill was launched amid indications the high court might reverse the Roe ruling.

Canadians beg to join U.S. forces in the war

BELLEVILLE, Wash. (AP) — Hundreds of young Canadians eager to join the war against Iraq are contacting U.S. recruiters in northern border cities from Bellingham to Canadian military.

They see the Rambo movies, it gets their motor going," said Stig. Ric Logg, a Marine recruiter in Bellingham, 21 miles from the Canadian border.

But the vast majority of Canada's would-be warriors leave U.S. recruiting offices disappointed.

Immigration laws prohibit most non-residents from serving in any branch of the U.S. military.

"Maybe one out of every 20 that I get calls from is qualified," Logg said.

Baliffs arrest drivers with revoked licenses

LAGUNA NIGUEL, Calif. (AP) — Drivers whose licenses are suspended at South Orange County Municipal Court had better check behind every tree before illegally getting behind the wheel.

During the last 18 months, bailiffs have nabbed about 100 scofflaws as they try to drive away from a court hearing at which their licenses were revoked. The bailiffs do it by tailing people coming out of court, some times hiding behind trees and parked cars to watch violations occur.

Department of Motor Vehicles officials say the program in South County Municipal Court is probably the only systematic law enforcement effort in California to catch motorists who drive with suspended licenses.

Plane returns to LAX due to stalled engine

LOS ANGELES (AP) — An Arizona-bound Delta Airlines Boeing 727 returned to Los Angeles International Airport after one of the jetliner's three engines stalled briefly, the airline said Tuesday.

The jetliner landed safely at 6:46 p.m. Sunday and there were no injuries.

The pilot of Delta Flight 1148, bound for Tucson, initially thought a bird had been sucked into the No. 1 engine, the Federal Aviation Administration said Sunday night.

"It had a stall-like effect, like a spitting effect, just after takeoff," said Frances Connor, a Delta spokeswoman in Atlanta. "It was a compressor stall on the No. 1 engine. They thought it was a bird."

Homosexuals are outcasts

I don't believe I am reading another article on homosexuality (Feb. 13 Insight). I know this is a big issue of today, but there is something I don't understand. Are they getting angry because they are receiving opposition from certain organizations? What else do they expect? Their way of life is wrong and is something that is not and will not be accepted.

It is fine that they meet on the outskirts of town, and they should not be upset by that. Live your lives the way you want to, but don't ever expect it to be accepted or approved, because that is just not the way life is supposed to be lived.

Clarke Brogger
Social Sciences

Construction is too noisy

I am writing about the current building and renovations that are in progress next to the business building. Granted these additions are necessary and welcomed by a large majority of both the faculty and student body. We need to be reminded, however, that this is not a little construction, and we are not here to put up with the noise that accompanies it.

This is a sanctuary for higher education, and the priority should be to preserve that through an environment that encourages thinking and concentration. It is becoming more and more difficult to hear and respond to our professors' daily lectures with the constant banging of jackhammers and heavy equipment.

I have been told that there has been an attempt to be reasonable in requesting that our class be moved to an area where it is possible to learn, but the response was clear cut in saying there are no classrooms that are available and you are not the only ones complaining.

Well, I should say to the administration that the problem still exists, and now that it is acknowledged it needs to be dealt with in a reasonable manner. This is a problem that needs immediate attention. I am not paying tuition to support an administration that tells me there is a problem, but you're not the only one experiencing it. This is a response that I would expect from a military organization not from an administration that is supposed to be looking out for the best interest of both the university and the students.

Frank Cikutovich
Political Science

Council needs to be recalled

I was impressed with Richard Kraenzdorff's letter to the editor (Feb. 11). Impressed, that is, that a political science teacher with a Ph.D. would have such a lack of knowledge regarding a recall movement. We are exercising the purest form of democracy in a city that's City Council controls regular elections better than a six-term incumbent congressman.

As a biologist and former school teacher, it is good to see you students love the recall! Until now, you have been shut out of local politics, even though, combined with other voting groups, you make up the majority of voters. For years, the majority has voted against Peg Pinard and Penny Rappa yet can't unite among common candidates.

Also, I need to meet the phenomenon "developer" Mr. Kraenzdorff wrote was supposedly running our recall petition table in the U.U. plaza. I'm interested since I gathered 800 signatures against City Hall's Downtown Courthouse project and 700 signatures against the Pacifica Corporations' Arbors project plus another 1,500 for the "Water Action" initiative.

Mr. Kraenzdorff supports councilmember Rappa and others who give the city's pet developers what they want while giving us water shortages, sprawl and years of student actions.

Mr. Kraenzdorff should have mentioned that his council buddies, Penny Rappa, Peg Pinard and Jerry Reiss regularly buy and sell millions of dollars worth of real estate each, according to county records. Rappa and Pinard collect Cal Poly student rental income while supporting the hard working students. Recall means democratic rule in SLO town.

Richie Ray Walker
Recall Chairman
City Council is doing its job

San Luis Obispo City Council members are elected for a reason. I am sure of that reason. It is for making logical decisions for the public and its health.

I support their decision for the no smoking ban on the basis of a few things. Yes, I do believe in freedom and freedom of choice. I do support the majority of others who is violating my health, that's where I draw the line.

But the response was clear cut and you are not the only ones complaining. Mr. Kranzdorf supports for freedom, my freedom. Maybe you don't care about my health, but I care about mine, SLO City Council, I salute your decision.

WANTED!!!

A few good Civil Engineering grads with strong GPA's & excellent verbal & written skills

Senior: $37,254-$45,672*

Junior: $27,444-$32,680*

*Depending On Qualifications

Possible increase 5/1/91

To: EBMUD

Call (415) 287-6735 to attend our Civil Engineering Open House (bring transcripts if possible) on Thursday, March 7 OR send resume, GPA & list of engineering courses to: David L. Klein, EBMUD, P.O. Box 24055, Oakland, CA 94623-1055. We are an equal opportunity employer.
Eating disorders:

Starving for support

By Darrell Hallenbrook

It is not a surprise that most students with eating disorders don't want to come out and talk. Most believe they don't have a problem, while others find help through group programs such as Overeaters Anonymous. In our society there is a lot of shame involved in having an eating disorder.

Julie, a 28-year-old business graduate student at Cal Poly, said her overeating problem began in college. Julie said she grew up in an environment where everybody ate large meals, and when she left home to go to school she ended up gaining 60 pounds in the first eight months.

"I had no idea until college that I had an eating disorder," she said. "I would go on a diet, lose weight and then gain it back." She said eating was a way for her to cope with problems. "Some things are habit, and you don't realize it at the time."

Julie said she ate large meals, and when she even when celebrating with family and friends." Julie said it was easier to deal with feelings when eating, she said. "In a sense, I swallowed my anger when eating, and it seemed to work."

Julie said she was able to find help for her condition after she accepted that she had a problem.

"When I started going to Overeaters Anonymous I realized that I had a disease of the mind and the body," she said. She found out about the support program from a newspaper article.

Darrell Hallenbrook is a journalist junior with a concentration in public relations. This is his first quarter reporting for Mustang Daily.

There were times, she said, when her obsession with food would be triggered by something she saw on television or in a magazine ad. She said that when she feels an urge coming on, she exercises or studies to take her mind off it.

"At times I found myself eating due to anger, stress and even when celebrating with family and friends," Julie said.

It is not a surprise that most believe they don't have a problem, while others find help through group programs such as Overeaters Anonymous. In our society there is a lot of shame involved in having an eating disorder.

"I had no idea until college that I had an eating disorder," she said. "I would go on a diet, lose weight and then gain it back." She said eating was a way for her to cope with problems. "Some things are habit, and you don't realize it at the time."

Poly lacks programs for student eating disorders

Because of state budget cuts in the last three years, Cal Poly will not be able to effectively deal with the growing problem of student eating disorders, leaving students no other alternative but to look elsewhere for therapy, said Rita Rich, a Cal Poly Health Center nurse and a former mental health nurse. Rich described Cal Poly's growing inability to deal with student eating disorders as "epidemic."

"Budget cuts over the last two to three years have disintegrated a very visible and extremely important program," she said.

The three most common eating disorders are anorexia nervosa, bulimia and compulsive overeating. Anorexia nervosa is characterized by an intense preoccupation with food and the fear of becoming overweight. Bulimia is a syndrome that involves self-induced vomiting, extreme binging and the use of laxatives and diuretics. Compulsive overeating involves eating large quantities of food to cope with emotional distress.

When the eating disorder program was in full operation, it consisted of two therapy groups with a waiting list for both. The program was supervised by a team of health specialists and a full-time mental health nurse.

But students with eating disorders now are having to go into the community to receive therapy, which is expensive and doesn't necessarily work as well as the free group therapy which was offered on campus, said Rich. "Eating disorders are psychologically based, and individual and group therapy is an integral part of the recovery process."

Last year there was one counselor and one group available for people with eating disorders, said Rich. Now there aren't any groups, and the counselors are referring out into the community because of the lack of time needed to deal with all the patients who need assistance. "Ideally there should be two groups."

Dr. Lois Dirks of the counseling center said that presently there are six available counselors for the campus who can deal with eating disorder patients with a certain degree of expertise.

"Due to the budget the school does not and cannot effectively provide services for people with eating disorders," Dirks said.

There used to be a health team to assist people with these types of disorders, said Dirks, and now that doesn't exist. There are also fewer counselors to provide for all the students, she said.

"The statistics of people with eating disorders is not very reliable due to the fact that they are not readily talked about but are usually kept in the closet," said Dirks. The problem with student eating disorders is prominent on college campuses, she said.

According to American College Health Association literature, 12 percent of the people in the 16- to 21-year-old age group have an eating disorder. The organization cites an eating disorder "problem in (the) college scene because most activities and events take place around eating and drinking, whether in the dining halls, at private parties or when having late-night snacks."

For more information concerning eating disorders contact the Health Center (756-1211) or call the eating disorders hotline at (805) 544-6163. — Darrell Hallenbrook
We’re attracted to college students for what they haven’t learned: limitations. Systems to applications, multimedia to networking, you won’t find any limitations at Microsoft. What you will find are small teams and immediate responsibility for important projects.

We’re out to revolutionize the world with our vision of personal computing. And we’re looking for the brightest technical minds to do it. Many of them already work here as Software Design Engineers and Program Managers—learn how you can join them.

Career Symposium
Feb. 21, 1991
Chumash Auditorium
10:00 a.m.-3:00 p.m.
On-campus Interviews for Summer Positions
Feb. 25, 1991
See your Career Center for details

You’re never too young to change the world.

If you are pursuing a BA/BS, MS or PhD degree in Computer Science, Electrical Engineering, Math, Physics or related technical area, then let’s talk about your programming experience, design skills and/or exposure to managing projects. Relocation is available for summer positions. Be sure to visit us at the Career Symposium on February 21.

We are an equal opportunity employer and are working toward a more culturally diverse workplace.

In Insight, you’re fighting three addictions—body and
and decided to go, she said. “Overeaters has given
me the tools to get my life back,” she said, “and I’m
grateful for that.”

Jule said that with eating disorders you’re fighting three addictions—body addictions, food addictions, and
compulsive eating itself. “I had to learn to think in a
different way and to realize that dieting was not an
answer,” she said. “Food was just a symptom of the
disease.”

Julie said that with eating disorders, “There are lots of people who have the
disease,” she said, “but it is an unreliable ratio because
disorders are seen as being taboo and are not readily
talked about.”

“Anonymity is vital,” she said. The group is strict about confidentiality
because it feels there is shame involved in
having an eating disorder.

In the meetings, people realize that they already have the answers and that it is
just a matter of expressing themselves, she said.

“Some of the tools offered by the program
include abstinence, literature, writing,
meetings and keeping in touch with
others,” she said. Overeaters Anonymous
helps people to express themselves, but
that doesn’t mean they’re cured.

“It’s a disease,” she said, “and it’s not a
matter of willpower but realizing that
you’re powerless and cannot control your
food.”

Compulsion is an on-going problem, she said.

“A one out of every five college students has eating
disorders,” said Holzgang. “... (but it) is an unreliable ratio because
disorders are seen as being taboo and are not readily
talked about.”

— Judy Holzgang

Baseball ends slow start, sweeps four games from Utah

By Amy Reardon

Call it revenge, but the Cal Poly baseball team had every reason to put it in style.

"It's a great match for us," said Cal Poly Head Coach Leonard C. "This is the one where we could win a big one." 

In the match, no break was made from the beginning, as the Mustangs went on to defeat Utah 7-4. Utah's lead was 1-0 after the sixth inning, but the Mustangs took over and never looked back.

Drake also did well, going 2-for-3 and 5-for-6 respectively.

So the Mustangs scored 2-5 for the season when they first took on the Utes. 

Peter Stoltz Mollhoff started Friday's game. Cal Poly opened the scoring in the second inning on a Jason Pekruzynski sacrifice fly. In the fifth inning, Snyder hit his second home run in as many days. The Utes pulled ahead in the game on a Jason Pekruzynski sacrifice fly. Snyder hit his second home run in as many days. The Utes pulled ahead in the game on a three-base hit from Yanni DiMaggio.

The Mustangs went up 1-0 in the first inning when they made a double play. The Mustangs scored the first runs of the game when they scored two runs in the first inning. They scored two more in the second inning.

Drake also was consistent, getting a double and a hit in the ninth inning to preserve the shutout. The Mustangs went on to defeat Utah 7-4 in the last dual match before the Pac-10 championships this weekend in Palo Alto.

SYMPOSIUM

From page 1 all agreed on one thing: They are dents.

The Placement Adviser Jan Chamberlain is the symposium's coordinator. vivid that though some of the companies may not be doing as much hiring this year, the people who are here to maintain exposure at the symposium are one way for them to keep students familiar with their names.

Chamberlain said that between 2,000 and 3,000 students have attended symposiums over the last several years.

Many of the companies will be interviewing on campus during Career Week or at a later date, and most will be accepting resumes, even if they are not hiring at this time. All of the recruiters interviewed said they are anxious to meet students interested in employment opportunities with their companies.

Bob Barnett is the manager of contracts and purchasing for Chemical Information Technology Company, an independent company with 20,000 employees that provides data, communication and information services.

He said that he has been attending the career symposium "from its beginning" and that the company hires more graduates from Cal Poly than from any other school but one.

"Cal Poly is not their number one site for recruitment, he said, because the company hires primarily chemical engineers, a field which Cal Poly does not have.

"We are very interested in graduates from all the engineering programs at Cal Poly," Barnett said.

The company also hires graduates in computer science and business, particularly accounting majors and those with MBAs.

Barnett will be on campus for interviews on March 6 and 7. "I encourage students to come by and sign up," he said. "Even though the interview schedule is usually full, occasionally I will be aware of positions and can get them on our schedule."

First Interstate Bank is another company that has recruited at Cal Poly for years. College Relations Representatives Kathleen Healy said this year's symposium will be more for public relations purposes.

She said she will be happy to take resumes and that the company will be conducting on-campus interviews March 6.

"We look for well-rounded individuals," Healy said. "No one is interested in a strong GPA, leadership experience and some customer service or supervisory experience.

Dena Cagliero, sales manager for the hotel and restaurant division of EJ J Gallo in the Santa Maria Valley, is a 1985 Cal Poly graduate.

"This year Cal Poly is one of only two campuses where we are interviewing," Cagliero said. The company is more interested in sales people with commitment than it is in any particular major, Cagliero said, "and every year we have been on campus we have hired people.

This will be the first year that Microsoft Corporation has sent a representative to Cal Poly. College Relations Manager Susan Stoppler said the company is located in the Seattle suburb of Redmond, Wash., employs some recent Cal Poly alumni.

Stoppler also has received some impressive resumes from Cal Poly grads, she said, and so "we thought we would come do some recruiting.

Microsoft will be interviewing on campus Feb. 25 and is looking for software design managers and program managers. Stoppler said she will be accepting resumes at the symposium, particularly from math, electrical engineering and computer science majors.

Another first timer at the symposium will be Kaplan Educational Center of Goleta. Manager Lisa Taylor said the company provides test preparation assistance for students preparing for exams such as entrance exams to law school and medical school. She said the company will not be interviewing but resumes will be accepted.

"We are always looking for outstanding instructors," Taylor said.

Kaplan hires applicants with teaching skills and people skills who have scored in the 90th percentile on the specific test for which they are hired to help students prepare.

Frito Lay Employee Relations Administrator Randy Block said his company will be accepting resumes at the symposium, interviewing March 11 and 12 for positions in the Bakersfield facility.

"Typically we have hired people with more technical skills - engineering, food sciences," Block said. "However we do have a need in other areas - agriculturists, sales and business and even some liberal arts."

Block said the company has hired many Cal Poly graduates. When asked if he was happy with them, he said "Absolutely."

The Gap, Inc. recently has been on campus for interviews and will have a representative at the symposium. Kathy Edwards, from the executive recruiting department, said the company comes to Cal Poly primarily to recruit for finance and accounting majors.

She said they are also interested in architecture students for summer internships at their corporate office located south of San Francisco in San Bruno. Interns will work on store planning and construction.

Mark Wets is the professional and technical recruiting manager for Martin County's Fair Isaac, Company. "I always look forward to coming to Cal Poly," she said.

Wets said she will be interviewing Feb. 20 and 22 and will probably have some free time during the day of the symposium. The company is particularly interested in computer science majors.

"We have hired quite a few Cal Poly graduates in the past and have been happy with them," Wets said. "That's why we keep coming back."

The Career Symposium is sponsored by Cal Poly's Career Planning and Counseling Services, Cooperative Education and Placement Services, Student Academic Services and University Outreach Services.

Anyone interested in more information about the symposium, scheduling interviews or other Career Week activities can call Career Services at 756-2501.

The Mustangs are ranked 14th in the latest ESPN Division II poll.

Chubb & Son Inc.
A Tradition of excellence

Chubb, one of the most respected names in the insurance industry, is a leader in product development and quality service. In addition to standard lines of insurance, Chubb is also known for its innovation in providing insurance for specialized markets such as banks and investment bankers, international corporations, and the boards of directors of fortune 500 companies.

We are looking for candidates from diverse backgrounds, who have demonstrated achievements and a strong desire to be part of a successful team.

We will be appearing at the Career Symposium
February 21, 1991

Please stop by our table and discuss career opportunities with our representatives.

Come and explore the possibilities!
From page 1 to read from their works.

Williams is a professor in the department of literature at UC San Diego and has written three books. She is most widely known for her first book, "Alpha House," which concerns a pregnant young slave who is freed during the early 1800s. It was nominated for a Pulitzer Prize in 1976. The volume contains autobiographical poems about a slave who led an uprising in the southern Negro drawl she adopted for some of her poems. Williams read from "The Peacock Song," one of the poems she read, which was special to her.

"In some ways I like to think of this as my theme song," she said. The audience was heartened.

"But if I'm a peacock, my feathers are always in reverse," she read. If you want to stay one, then you got to keep that tail from drooping so mines is always held up sky high.

Williams voice rose and fell, adding feeling to her poems as she read. She moved the audience into laughter, deep silence and often into applause. Williams credits Phil Devine, a poetry and literature professor at Fresno State University, as one of the first people to encourage her as a writer. She also mentioned Bennie Smith, a blues singer in the 1920s who was often called the "empress of jazz," as a woman who left a definite impression on her.

"She was obviously determined to let me feel the world thought of her stand in the way of what she wanted to do," Williams said. Smith came to fame and fortune in a time when most black women were ignored, and Williams "really became fascinated by her as a woman." Williams is a graduate of Fresno State University. She did graduate work at Howard University in Washington, D.C., and earned a master's degree from Brown University in Providence, R.I.
FLASHER

From page 1
The man was up to something, the prowler may have been part of a fraternity joke.

When they approached the man, he said and claimed he was looking for his 8-year-old nephew. After a short conversation, Allen said he left but then returned and looked in another window.

After the second sighting, Allen said they called the police who put out a bulletin describing the prowler and his white Chevy pickup.

The man was picked up later by sheriff's officers at San Luis Bay Estates near Avila Beach.

Detective Gregory Clayton of the San Luis Obispo Police Department said the man was identified by members of both sororities and charged.

Clayton said Burgess has a background of mental problems and has been arrested numerous times in Fresno on similar charges. Clayton said Burgess had "a chronic problem of exposing himself." It's "a behavioral dysfunction that he has because he may or may not get any sexual gratification out of it," Clayton said. "He's just sick."

Clayton said Burgess left Fresno and came to San Luis Obispo for the day. He said Burgess has been in therapy for 13 years.

Clayton said Burgess probably will get more therapy, community service and possibly jail time.

"It's pretty cut and dry from our standpoint," he said. "Burgess was easily identified, and we saw the guy here. He was looking in our window," Allen said. "He was up to something, although other residents thought the prowler may have been part of a fraternity joke."

When they approached the man, he said and claimed he was looking for his 8-year-old nephew. After a short conversation, Allen said he left but then returned and looked in another window.

Clayton said Burgess probably will get more therapy, community service and possibly jail time.

"It's pretty cut and dry from our standpoint," he said. "Burgess was easily identified, and we definitely has a mental problem."

In all of Burgess' prior arrests, though, Clayton said Burgess never touched anyone and was relatively harmless. "He's just doing his fantasy kick. He wasn't out to rape or harm anyone."

After being booked and released, Clayton said Burgess went back to Fresno but will have to return to San Luis Obispo for his court date.

ROOF

"There were just three of us to start out with," said Hulet. "But then other people from the different labs began to play too."

Hulet said not all players wear rollerblades, but they all use hockey sticks and a hockey puck.

SCIENCE

From page 3
Engineering Week activities are sponsored by the School of Engineering and the Engineering Council. More than 35 engineering clubs and 30 companies are sponsoring displays, contests, outreach and career opportunities.

Engineering Week is not solely a Cal Poly event. National Engineers' Week is celebrated during the week of George Washington's birthday. Washington was a military engineer who established the first U.S. military engineering school at Valley Forge, Penn., known today as West Point.

Engineering Week showcases the engineering profession and encourages young people to consider careers in engineering.

Simple engineering techniques apply to the paper airplane and hands-on contests. The Thursday Breaks. The boats will be tested for strength.

One secretary in the School of Architecture said she had not heard anything about the rooftop rollerblade hockey but said that nothing those students did for a break would surprise her.

Gerard Gentilucci, manager of Architectural Trades, the department that supervises building maintenance, said he had not noticed any signs of use or damage "out of the ordinary" on the building's roof.

Two standard black plastic garbage cans, found in most dorm rooms and classrooms, are used as goals. Games are usually played once or twice a week or "whenever the mood strikes," Hulet said.

Students and faculty in the classes below the "hockey field" cannot hear a thing. Roof access is through labs on the third floor.

A career symposium will enable students to network with many companies Thursday in Chumash Auditorium.

The Minority Engineering Program and Society of Women Engineers have planned evening events where students learn about employment opportunities.

Corporate sponsors and students will work together on Saturday for the first Engineer Day at the Mall. A solar-powered race car, hand-powered vehicles, hands-on computer displays and a popsicle-stick bridge-building contest are a few of the activities.

Members of the Society of Hispanic Professional Engineers will teach students to apply engineering skills to build better paper airplanes.

"The purpose is to experiment," said Bruno Garcia, SHPE president. "They can make the wing span larger and find out what works. That's how engineering works in the real world."

Local elementary and high school students will compete in coloring, essay and bridge building contests. Executives from Exxon and Chevron will judge entries.
