Royal riots replaced by quiet calm

By Amy Reardon
Staff Writer

With last weekend as the first anniversary of the unforgettable Poly riot year and as Cal Poly’s first year without Poly Royal, no one knew quite what to expect for the weekend’s events.

Throughout the entire weekend, however, it seemed everyone just continued to wait to see what would happen. It was “really quieter than a normal weekend,” said San Luis Obispo Police Chief Jim Gardiner.

The Police Department had “maximum deployment this weekend. We were ready for anything,” Gardiner said.

Though he would not discuss specifics, Gardiner said “a lot” of officers were on patrol — anyone

Design Village comes back to Poly Canyon

By Tracey Adams
Staff Writer

Every spring, design students from all over California come to Cal Poly to participate in a three-day, hands-on conference in Poly Canyon.

This conference is called Design Village, put on by the 12 architecture students in the Design Village Club, and includes activities such as building structures and attending workshops and speeches.

The group has been organizing, fund raising and planning for the event since September, said Chris Vicencio, a third-year architecture student and Design Village Club member.

“A lot of people continue Design Village with Poly Canyon,” he said. “We’re just a group that uses it for our conference.”

Vicencio said that Poly Canyon is mostly used by the architecture department for experimental structures and senior projects.

Design Village used to take place during Poly Royal but now is part of the School of Architecture.

Standout Poly lineman signs with NFL Bears

By Geoff Seratil
Staff Writer

For Cal Poly student Pat Moore, the dream of playing football professionally became a reality last week when he signed a free agent contract with the Chicago Bears.

Moore, a six-foot two-inch, 272-pound defensive lineman for the Mustangs, signed a two-year contract with the Bears of the National Football League. Moore left last Wednesday for mini-camp with the Bears and returned to school on Monday.

Cal Poly defensive coordinator Bill Dutton, in his fourth year, said Moore is definite to start official practice with the Bears in their July training camp.

Dutton said the contract has a $6,000 signing bonus. Moore gets a $65,000 base salary the first year if he makes the team, and incentives in the contract could push that figure to $85,000. The second year has a $75,000 base salary with incentives up to $100,000, all contingent on Moore’s making the team.

Dutton expects Moore to make it. “He has the heart to do it. He has the drive and the want to compete. He’s in good shape. He’s heavier now than when he played at Cal Poly,” Dutton said.

Dutton said the Bears initiated all contact with Moore. He said professional scout Don King saw Moore three times and always had positive things to say about him.

Dutton said one of the concerns about Moore not being drafted was that he was not big enough to compete with the massive offensive linemen of the NFL.

He has increased his weight to 272 pounds and his bench press to 460 pounds. He’s in great shape. Moore is heavier now than when he played at Cal Poly.

See MOORE, page 7

Reminder...

The spring CAPTURE schedule is now available at El Comal Bookstore. Registration will begin May 17.

Ultimate win...

The Cal Poly ultimate frisbee team placed second in the Southern Sectional playoffs.

Budget crunch must be solved

I am getting really tired of all the publicity and chatter because of the recent budget cuts. What I want to know is what is being done about it? It's well known that the Cal State budget has been drastically reduced. Professors are losing their jobs. Sports, clubs and special programs are losing financial support and being canceled. Next year our fees are going up 20 percent, and yet many students are losing financial aid.

The most frustrating part to me is that presently there is more construction and plans for construction now than in the past four years that I've been here. I see a new faculty office building, a new business wing with faculty, a remodeling plan for faculty office in the EK building and the new Rec Center. As well as other things such as the huge increase in the chancellor's salary. Were there things so important that they couldn't wait until the serious budget problem is solved? Before programs are cut, professors fired and fees raised, I would like to see people making some sort of effort to solve the problem and not add to it.

AFFIRMATIVE ACTION PROGRAM COULD HURT MORE THAN HELP

By Travis Swafford

Positive discriminating admissions policies have been the norm for public schools in this state. But it is necessary, if we are going to achieve a fair and equitable admissions program for public schools in this state.

50% of the students are being accepted to Cal Poly, it is bound to affect the academic reputation of this institution.

The 1989-1990 freshman class at Cal Poly provided a glaring example of what I'm talking about. A GPA of 3.0 or better was achieved by one in three white freshmen last year, while only one in six of their Mexican-Americans classmates could do as well. And only one in 20 black freshman achieved a 3.0 GPA. We are faced with a tough decision. Should we admit lower quality students in order to boost minority enrollment; thereby, forsaking the reputation of academic excellence this university has built up? Or should we give up achieving ethnic diversity in order to maintain high academic standards?

Obviously, we must continue to admit minorities and maintain our superior academic tradition at the same time. The question is how?

Many people claim that minorities don't have a fair chance to compete at college because they have received inadequate fundamentals in elementary school, junior high and high school. That is why we must focus our efforts at that end of the educational spectrum.

We need to work to improve the school systems for minorities before they reach the college level. In doing so, we could achieve an even field on which all students, regardless of race, could compete.

By improving schools in disadvantaged areas, we could create an environment in which everyone has an equal opportunity to learn. Then, if someone can't compete, it is not the problem of the CSGO system.

This kind of program would obviously take a long time to implement. It would entail a major restructuring of the educational budget in this state. But it is necessary, if we are going to achieve a fair and equitable admissions program for public schools in this state.

Until the current budget structure is changed, we must have an admissions system that gives advantages to people based on income levels in which they live, rather than race.

This would help the needy people of this state to get an education. Also, it would achieve the cultural diversity desired, without basing admission solely on race. Thus, the fundamental objective of achieving cultural diversity would be accomplished, and the people who truly deserve help would receive it.

Travis Swafford is a journalism senior. This is his first quarter reporting for Mustang Daily.

REPORTER'S NOTEBOOK

Affirmative action program could hurt more than help

By Travis Swafford

Ethnic Diversity. It's the latest rage at Cal Poly. Everyone is scrambling to make this university "representative of California's population." 

We recently had the First Annual Ethnic Issue Open Forum, and the Multicultural Center is featuring a series of speakers talking about the value of cultural diversity.

The All Board of Directors recently passed a resolution calling for an ethnic studies or multicultural curriculum. The same resolution also recommends that an ethnic studies class be added to our general education requirements.

The university's Strategic Planning Commission (whatever that is) recently released a list of goals concerning ethnicity and educational equity on campus.

The number one goal of this organization is to "improve the sense of collegiality among all individuals regardless of age, country of origin, creed, economic background, gender, race, physical disability or sexual orientation." This kind of program would obviously take a long time to implement. It would entail a major restructuring of the educational budget in this state.

We are faced with a tough decision. Should we admit lower quality students in order to boost minority enrollment; thereby, forsaking the reputation of academic excellence this university has built up? Or should we give up achieving ethnic diversity in order to maintain high academic standards?

Obviously, we must continue to admit minorities and maintain our superior academic tradition at the same time. The question is how?

Thai police arrest 39 students for cheating

BANGKOK, Thailand (AP) — Thirty-nine students were arrested for cheating on a medical school entrance examination, police said Monday.

Police Lt. Col. Anuchai Lekhenrung said the students were arrested Sunday during an exam being taken by about 400 people trying to win one of 30 places at Mahidol University.

He said 11 students planned to answer questions from outside the examination room to 38 candidates taking a multiple-choice test. The 11 had taken the test earlier and memorized the answers, he said.

The students taking the test had small radio receivers attached to their thighs or abdomens that could receive coded pulses for the answers, he said.

Police did not say how the scheme was discovered, but Chatchawarn Apapongcharee, director of Mahidol's School of Medical Biotechnology, said undercover police check for attempted cheating during such exams.

Man blames casino for his gambling debt

MOUNT CLEMENS, Mich. (AP) — A businessman says he shouldn't be held responsible for $35,000 in gambling losses in Las Vegas because a casino plied him with free drinks until he lost his judgment.

A Michigan circuit judge has ordered a jury trial on a lawsuit by the Riviera Hotel and Casino seeking to collect on money Bill Kasab lost there Dec. 30, 1985, through Jan. 2, 1986. No date was set.

The casino provided transportation, lodging, food and drinks, plus a line of credit, for Kasab and his wife, Amira. Kasab, 42, lost $35,000 playing blackjack, craps and slot machines.

He paid $2,000 but refused the rest.

"I think that's an incredible argument by Mr. Kasab that he was drunk all four days and didn't know what he was doing," casino attorney Mark Stritchler said.

Kasab, owner of a Macomb County video store, declined comment. Psychologist Terence Campbell, who examined him for the defense, said Kasab suffered diminished mental capacity because of the drinking.

Drunken couple loses baby girl at taco stand

BELL GARDENS, Calif. (AP) — A couple who took their 8-month-old daughter to a taco stand after a night of partying woke up at home the next morning and couldn't remember where they left the child, police said Monday.

David Prado, 37, and Michelle Velasquez, 38, told police they were so drunk after a Saturday night party that when they woke up Sunday morning they didn't know what happened to the baby, said dispatcher Karen Kott.

Jandel Prado was still missing Monday, Kott said.

The Bell Gardens couple told police they left the baby and an older child with a babysitter to go to the party. They remembered coming home intoxicated and taking Jandel to El Tocano in neighboring Bell sometime before 4 a.m. Monday. That's the last time they remembered seeing her, Kott said.

Student death causes violent rallies in Korea

SEOUL, South Korea (AP) — A radical student set herself ablaze Monday and tens of thousands of others fought riot police and gasoline at a Seoul university on Monday night to protest Friday's beating death of a 20-year-old.

The nighttime rally at Seoul's Yonsei University was the largest student protest of thousands of others fought riot police and Molotov cocktails and gasoline at a Seoul university on Monday night to protest Friday's beating death of a 20-year-old.

The student, who was arrested for crheming to use illegal radio equipment to cheat on a medical school entrance examination, police said.

The student was arrested Sunday during an exam being taken by about 400 people trying to win one of 30 places at Mahidol University.

The police said 11 students planned to signal answers from outside the examination room to 38 candidates taking a multiple-choice test. The 11 had taken the test earlier and memorized the answers, they said.

Police did not say how the scheme was discovered, but Chatchawarn Apapongcharee, director of Mahidol's School of Medical Biotechnology, said undercover police check for attempted cheating during such exams.

Bank's error results in windfall to poor school

NEW YORK (AP) — An overlooked decimal point at a bank brought a windfall to schoolchildren of two impoverished Chinese villages.

The foreign exchange department of Morgan Guaranty Trust Co. sent $10,000, instead of $100, to the elementary school of Yujiao, China.

For most of the children, a tiny fraction of the money is the difference between finishing school or dropping out. The school's annual fees are only $13, but the per capita income of central China hamlet is less than $60 a year.

Morgan Guaranty converted the accident to a semester studying with the Sea Education Association. The program in­cludes six weeks of deep­sea research and visit ex­otic ports including Martini­que, Jamaica, Bermuda and Newfoundland.

The cost of the semester­long program is almost $8,000 per student.

More than 2,600 students from 250 colleges and univer­sities have studied oceanog­raphy, humanities and seamen­ship at SEA since it was founded in 1971. The program begins at SEA's campus in Woods Hole, Mas­sachusetts. The program in­cludes six weeks of deep­sea sailing and research aboard either of SEA's ves­sels, the 125-foot schooner SSV Westward or the 135-foot brigantine SSV Corwith Cramer. Undergraduates in any major can select from either of SEA's programs — "Sea Semester," which emphasizes ocean sailing and research at sea and visit ex­otic ports including Martinique, Jamaica, Bermuda and Newfoundland. The ship is a 250-foot college of arts and science, and it has been sailing for 20 years.

The nighttime rally at Seoul's Yonsei University was the largest student protest of thousands of others fought riot police and gasoline at a Seoul university on Monday night to protest Friday's beating death of a 20-year-old.

CSU professor fights to be rehired at age 72

Bakersfield, Calif. (AP) — Even though he's 72, criminology professor John Webster wasn't willing to retire, so he forced a change in the California State Universities System.

A Los Angeles judge granted Webster a hearing on the refusal by the Cal State-Bakersfield administration to rehire him for the current school year. Until that ruling, hearings were not provided for professors who were terminated and who were over the retirement age.

The system has a mandatory retirement age of 70, but antidiscrimination laws let people keep working on a year-by-year basis if they are found capable. Webster was al­lowed to continue teaching in the 1989-90 school year, but his request was denied this year.

Workshop shows leadership is for everyone

By Gabrielle Friedly
Staff Writer

Leadership qualities are generally thought to be found only in a small, select group, says a local therapist.

Jean Decosta, who is also a consultant in private practice, expressed a different perspective of leadership Friday during Women's Week.

Decosta explained the important qualities of a leader as stated in the book, "On Becoming a Leader" by Warren Bennis. The qualities are:

Vision — Leaders need a vision of what they want.

Passion — The passion that burns within people drives them to accomplish goals.

Integrity — People must know themselves and be honest with themselves.

Trust — Trust does not come instantly, it is earned and maintained.

Curiosity & Daring — Leaders must have some sense of curiosity and be able to take risks, especially when they are under pressure.

In conjunction with these qualities, Decosta discussed several factors that allow leaders to emerge from a leaderless group.

Other contributing factors that allow leaders to emerge from a leaderless group include:

1. The higher the social status, the more likely they will emerge.
2. The more they have these five freedoms.
3. Other contributing factors that allow leaders to emerge from a leaderless group include:

By Scott Kipp
Special to the Daily

Cal Poly's ultimate Frisbee team, looking toward the national championship, placed second in the first round of playoffs last weekend.

The Southern Sectional at UC San Diego pitted Cal Poly's CORE against college teams from Southern California. CORE ended the day at 5-1 with their only loss being to UC Santa Barbara's Black Tide.

CORE started the day against San Diego State University. Ken Smith set the tone of the day with a soaring drive that demoralized San Diego's "Home Boys." CORE continued to crush and ended with an 11-4 victory.

CORE's other victories of 11-14, 11-2 and of Black Tide was looking to retain the Southern Sectional crown when they faced the Black Tide.

CORE was hoping to retain the Southern Sectional crown when they faced the Black Tide. CORE started solid with Cal Poly's BLOZONE, the team's defensive nickname, putting a formidable wall in front of the Black Tide.

The national champions of last three years had the equipment to chisel away at the wall with consistent swinging passes. BLOZONE's solid structure staid a plethora of passes that resulted in multiple scoring opportunities.

With the score tied 2-2, BLOZONE was in a serious struggle with the power and drive of Black Tide. CORE was slowly progressing up the field, taking one point at a time, and carrying them through to a victory.

After five turnovers by each team, Black Tide took the eight-minute point foulup occurred when the ball was turned over at mid-field.

Worse than scoring the single point Black Tide called on their reserves of 33 bucksters (even though only seven were in front of the Black Tide).

The national champions of last three years had the equipment to chisel away at the wall with consistent swinging passes. BLOZONE's solid structure staid a plethora of passes that resulted in multiple scoring opportunities.

"We are all taught in childhood to discern these freedoms," Decosta said. She said that to be a good leader, a person needs to have these five freedoms.

"It is only when we begin to see that we have the right to own these freedoms (that) we can emerge as leaders," she said.

Other contributing factors that allow leaders to emerge from a leaderless group include:

1. A good leader is someone who has high-performance self-esteem.
2. A good leader must have some sense of integrity and honesty.
3. A good leader must have some sense of curiosity and be able to take risks.
4. A good leader must have some sense of trust.
5. A good leader must have some sense of passion.

WEEKEND
From page 1
who was available.
"We had extra officers," Gardiner said. "We set some house early both Friday and Saturday nights," because San Luis Obispo was so quiet.
Gardiner said he thinks the emphasis Cal Poly and ASI placed on keeping this weekend under a low profile played a big role in limiting the events.
He said officers broke up about eight parties on Friday night and "something comparable" Saturday night.
Friday night, the California Highway Patrol placed a sobriety checkpoint on Broad Street, near Orcutt.

"That was the highlight of the weekend," said Public Affairs Officer Frank Stricker. "It was real mellow, pretty average for a springtime weekend."
Between the hours of 7 p.m. and 12:30 a.m., a staff of one lieutenant, one sergeant and 10 officers stopped and checked the 956 cars that passed the site.
Stricker said officers gave seven sobriety tests, made three arrests of drivers who were under the influence and gave one "open container" citation. He said these numbers were not out of the ordinary.
"We suspected there would be no problem," Stricker said.

LEADERSHIP

From page 4 as a leader," Decosta said. Also, people of higher socioeconomic status will usually display dominant characteristics. They will interrupt more and dominate the conversation by not allowing others to interrupt, she said.

Another leadership factor is nonverbal behavior. Leaders are analyzed 90 percent by nonverbal actions and 10 percent by verbal exchanges. Leaders who display an open behavior and are relaxed, convey their leadership attitude to others, Decosta said.

Women who cross their legs at the knees rather than the ankles are considered to be displaying a closed behavior position, she said.

Perhaps the most obvious factor affecting status and leadership is sex roles. "Society automatically gives more status to men," Decosta said.

Men are perceived as task-oriented, and women are seen as emotional and socially concerned, she said. Men stick to the rules even if there is a disagreement, whereas women will bend the rules to avoid argument, she said.

Decosta pointed out that society automatically gives minority groups a low status. She said this means that minority groups must first prove themselves to the group in order to become leaders.

Those attending the workshop were able to find out just how others perceive them by participating in a game.

Decosta divided the audience into groups and gave a scenario that presented a life or death situation. Each group had to find the best person to lead them to safety.

After the interaction, human development senior Melissa Kawakami said, "It is really an eye-opener how leadership is not natural. It takes a lot to build up a rapport with others."

The workshop was not attended solely by women. John Grice, an agricultural business sophomore, was present to expand his knowledge and learn more about women.

Grice said he gained "insight on roles of women in leadership positions and how women emerge as leaders."

Ski team member Mike Coley competes in the slalom in the last meet of the year.

Cal Poly ski team finishes year despite small squads

By Adrian Hodgson Editorial Staff

The Cal Poly ski team concluded its season last weekend at the final meet of the Southern California Collegiate Ski Conference season.

On the men's side, Brett Winkler, Mike Coley, Mike Monk and Tony Glidde finished eighth out of 12 teams in the giant slalom and fifth in the slalom, both without the services of Poly's top-rated skier, Chuck Parsons.

The women's team, consisting of Melissa Beck and Cynthia Collins, performed well, but the team results were limited because Cal Poly was unable to field a full team of five. The pair took seventh (of seven teams) in both the giant slalom and the slalom.

Overall this season, the men placed seventh in the SCCSCC. "We had a bigger team last year," Collins said. "We are making Beck's work all the more difficult."

"Not racing with a full is like playing basketball with only three people on your team," Winkler said. "What the women's team really needs is a full team so they can score some points."

Of the 81 individual competitors in the SCCSCC's women's division, Beck finished the season in 60th place and Collins placed 68th.

"The rest of the team will hopefully improve next year," Winkler said. "We need everyone to shave off some time next year and get some team members finishing near the top. Most of the team had little experience racing, so with more experience and practice, improvement will be unavoidable."

the field. The continuous flow of the tide caused CORE's fatigue and frustration.

But CORE was in no way washed away. Sound play and aggressive defense was exhibited by both Frank Phillips and Scott Clark. CORE's offensive structure was well established and the team worked the disc upfield effectively. The defense played consistently and forced several turnovers. Curtis Malam had an inspirational game with diving catches and blocks.

Coach 'Buz' Ellsworth provided several attack strategies and constant encouragement from the sideline.

Fee hikes may force dropouts, transfers

SACRAMENTO (AP) — Thomas Dean of Long Beach had lunch with his granddaughter, a first-year student at the University of California at Davis. She told him three roommates plan to leave campus next year because of fee increases.

Then he went to a Sacramento meeting Sunday of the California Postsecondary Education Commission.

A commission committee was discussing fee increases at the UC system, California State University and community colleges prompted by the state budget crisis. UC plans to increase fees 40 percent, while the other two systems are proposing to go up 20 percent.

Dean, a trustee at Long Beach City College and a former California State University, Long Beach, dean, said the UC students described by his granddaughter will "either drop out completely or transfer to other colleges prompted by the state's community colleges." He said.

"One result of fee-inspired dropouts, transfers, probably severe." he said. "The problems are severe," he said, "and our colleges are trying to "put together fair, objective information about what it means.""

MOORE

From page 1 at 200 percent.

"Dutton said the Bears are an aging team. "Moore has youth in his favor."

"Dutton said Moore is a quick player with good acceleration. He ran a 4.8, 4.8 in the 40-yard dash, a good time for a defensive lineman. He said Lavra liked Moore's quickness.

Dutton compared Moore to Marcus Cooke, a starting defensive end for the Washington Redskins. Dutton reached Cooke at Boise State but said Moore is smaller than Cooke.

"Dutton said Moore can play in the NFL. He is a technically sound player who plays hard."

The last Mustang player signed into the NFL was lineback Chris Dunn. He signed a free agent contract with the Atlanta Falcons in 1989 and also played with the Washington Redskins.

Moore will finish out the quarter and then number one quarter to obtain his degree from Cal Poly, Dutton said.

Dutton called Moore the "best defensive lineman he has seen since Pac 10 has been here. His ranks with the best ever that have played here at Cal Poly. I don't know if there will be another one like him."

Local dentist offers new, painless alternate to drill

By Shea Roberts

Since October, Dr. Alan Spano has been offering his San Luis Obispo patients the option of dental laser treatment.

"At first my patients are curious. They want to know what the laser does," Spano said. "But once they go through it, it's a big load off their mind, and they are very excited."

Spano said there are only 850 dental lasers in the country. His office is one of three dental facilities in the county that has a laser.

The American Dental Laser was created by two brothers, Terry and William Myers from Michigan. William Myers was one of the first American ophthalmologists to use a laser in eye surgery. He and his brother began experimenting with dentistry by using an ophthalmic laser on extracted teeth and studying the effects. With help from medical laser experts, the YAG (yttrium-aluminum-garnet) laser was developed.

The American Dental Laser removes tooth decay and sterilizes gum infections without using drills, scrapers or even Novocain in some cases, according to the Philadelphia Enquirer Daily Magazine.

Spano said the laser makes treatments bloodless in most cases, and he said healing is much faster. The laser is vibration free, precise, and patients experience less discomfort.

"One of my patients went out and had a steak dinner the same night," Spano said. "I didn't advise him to do it, but he felt he could."

Spano said he uses the laser on wisdom teeth, tooth decay, gum work and even root canals. He said in some cases he does not have to use anesthesia because the laser is so quick the brain does not have time to register pain.

Spano said there is a waiting list for the American Dental Laser.

"They (the trainers) first go through a slide presentation where they introduce the instrumentation. Then I spent a whole day working on patients with the trainers assisting and giving me pointers," Spano said.

He said there is an academy that has study club meetings where dentists who are using the laser can share ideas and experiences.

"Next month I'm going to Canada for an International Academy Dental Laser meeting where there will be presentations, seminars and sharing of group information," said Spano.

He said, "It's so new that we're still learning what it can or can't do in dentistry."

The American Dental Laser has been in the U.S. for only the last year and a half.

Spano said he thinks the American Dental Laser will revolutionize the field of dentistry.
