State subcommittee strikes blow to fee increase

By Allison Gatlin
Staff Writer

An Assembly subcommittee decision Wednesday night could mean Cal State University fees will be raised 10 percent instead of the 40 percent requested by CSU Trustees, according to a McClatchy News Service story.

The Assembly Ways and Means School Finance Subcommittee recommendation — made in a bipartisan, unanimous vote — illustrates the lack of political support for the fee raise, according to the article.

Poly to revise, scrutinize facility organization plan

By Christy Rinna
Staff Writer

In six weeks, Cal Poly's Master Plan will be subjected to scrutiny, suggestions and changes.

The revision process, which is poised and waiting to be set in motion, may take between 18 to 24 months to complete, said Interim Dean of Facilities Mike Martin.

"The Master Plan is the set of guidelines that allows the university to make decisions of the physical organization of the campus and also the infrastructure, which is its utilities," Martin said.

Every CSU campus has an approved Master Plan. Each covers land use, housing, open space, utilities, transportation and several other aspects of physical organization.

"Each of these pieces will go through a very specific analysis," he said.

Cal Poly's Master Plan underwent minor revisions in 1990.

Those revisions basically concerned siting of new facilities. The Master Plan has not been formally reviewed in its entirety since 1968.

Martin said the plan will be reviewed to determine the relevancy to the mission, direction and size of the institution. The lengthy process will determine to what extent revisions will be made.

Peter Phillips, architectural coordinator for the university, said revisions will be necessary to accommodate the potential of growth.

In order to do that intelligently, we need to know where we're going physically with this campus," Phillips said.

Martin wants to assure university constituents, including students, community members, and anyone interested in the future of the institution, that when the revision process begins, they will be given some sort of forum to express ideas and concerns.

"I think it is appropriate to put it in the hands of the agency which was created to look into these kind of things," Martin said.

Aguiniga steps up campaign

By Katherine Gill
Staff Writer

Jorge Aguiniga, a former political science lecturer, announced Thursday that he has requested an impartial agency to investigate his reassignment.

At the conference, Aguiniga said he has written a letter to the regional director of the Department of Fair Employment and Housing, asking them to look into the matter.

"I think it is appropriate to put it in the hands of the agency which was created to look into these kind of things," Aguiniga said.

Aguiniga also said that he has requested the intervention of the California Faculty Association regarding a list of 12 contract violations he said the political science department has committed.

"I have asked them to file a grievance," he said.

At the conference, Aguiniga said that members of the political science department continue to bring up issues unrelated to his complaints by writing letters to Mustang Daily.

Aguiniga stated those issues were brought up by faculty and not by him.

"At no time have I asked for any special treatment," Aguiniga said. "The one and only thing I have asked for is to be treated fairly."
China seeks to recruit, import Soviet scientists

BELING (AP) — China plans to recruit scientists and import technology from the former Soviet Union — "the sooner the better," the China Daily newspaper said Thursday. It did not mention nuclear technology or weaponry.

The official English-language newspaper said China will negotiate science and technology cooperation agreements this year with the former republics of Russia, Ukraine, Belarus, Uzbekistan and Kazakhstan. Russia and Kazakhstan have nuclear weapons.

China is one of the world's five acknowledged nuclear powers and has been accused of helping Third World countries develop nuclear technology. Its first nuclear power plant went into operation last year.

The China Daily report did not list specific areas where China would seek new technology, nor did it say how overtures would be made to the Soviet scientists.

Six indicted for selling horses for slaughter

LAS VEGAS (AP) — Six men, including three Shoshone Indian leaders, have been indicted on federal charges of selling 77 wild horses to a Texas slaughterhouse after capturing the horses in a helicopter roundup in 1990.

The horses were impounded by the Bureau of Land Management.

The six face misdemeanor charges of conspiracy and use of an aircraft to hunt wild horses. The charges carry a maximum penalty of six months in jail and a $500 fine.

The August 1990 roundup was conducted on public land near the Duckwater Indian Reservation, 80 miles southwest of Ely, in northern Nye County.

The indictment was returned by a federal grand jury in Las Vegas Wednesday.

Indicted were: Raymond Yowell, chief of the Western Shoshone National Council; Allen Moss and Ian Zabarte, who sit on the Western Shoshone Wildlife and Plant Resource Commission; Richard Hicks and Cliff Heaverne, who were identified as Nevada residents; and Dave Cattoor of Utah.

RICHMOND, Calif. (AP) — More than 300 people report suffering some kind of ailment from the release of more than 40 tons of metal-tainted dust at the region's largest refinery, according to a survey by a citizen's group.

The survey by the Toxic Cloud Task Force was the first effort at assessing the health effects of the Dec. 5th accident at the Chevron USA facility. The dust escaped when a valve mysteriously shut down at the refinery.

Chevron contends the illnesses were not long-lasting and that the refinery is working hard to prevent a repeat.

Those who answered the questionnaire reported combinations of headaches, sore throats, eye irritation, nausea, vomiting, skin rash and a "metallic or dirt taste."

About 250 said they or their families had been dusted, 220 said they'd seen doctors, 104 said powder had gotten on their pets, 135 said they had damage to gardens or other personal property, 30 said they'd suffered business losses, and 199 talked to lawyers.

What foods contain cholesterol? What foods are high in saturated fats? What foods are low in saturated fats? What are hydrogenated fats?

When it comes down to food and what's in them, these are perplexing questions. Here is some general information to sort out the fats:

Only animal products contain cholesterol. These include meats, butter, whole eggs, milk, and cheese. Vegetables, fruits, and grains contain only trace amounts of cholesterol.

Saturated fats are found in animal products such as meat, dairy products, and eggs. They are also found in tropical oils such as coconut oil.

Hydrogenated fats are used in baked goods and margarine to make them solid at room temperature. They are sometimes used as a substitute for saturated fats in processed foods to reduce cholesterol levels.

At two locations during finals
Complaint about alcohol program leads to change

By Renee Gallegos
Staff Writer

A confusing incident involving a Cal Poly student who tried to seek help via Peer Health Education has led the program to reorganize some of its methods.

The student, "Bob," has a problem with alcohol abuse and was seeking support through Peer Health.

What he got instead was a long-run around.

"Bob" drinks alcohol three to four nights a week. He usually spends Thursday through Saturday (sometimes Sunday) at local bars, drinking heavily.

He often misses his classes on Friday and Monday because he is too tired from the night before. He said he never really gets hangovers, as most people in bars, drinking heavily.

Poly's athletic teams, but he was four nights a week. He usually gets hangovers, as most people in his situation might. He used to play for one of Cal Poly's athletic teams, but he was forced to quit when he couldn't get up to go to practice.

Several programs dealing with alcohol awareness are available at Cal Poly for students who feel they may have a problem.

But are these programs really beneficial to students like the equipment.

asks someone what they've been doing and they're apt to reply, "working out."

Four treadmills were placed upstairs inside the U.U. to help students try out the equipment and leave an opinion in the comment box.

Students can test the machines to see if they would like to have them in the new Rec Center.

Star Track was one of the exercise equipment companies that donated some equipment.

Marc Maloney, Rec Sports assistant coordinator, said that so far students like the equipment.

They like the whole idea of being able to see them before we officially get them," she said.

Maloney also said that she's expecting two Stairmasts, also donated by exercise equipment companies, to be available for use sometime next week.

She noted that Rec Sports has been trying to keep some staff members in the U.U. during the afternoon in case anyone has any questions regarding anything about the equipment.

Amy Baker, U.U. Information Desk attendant and an environmental engineering senior, said that several people have tried the machines out.

"Others look at the machines but don't get on because they're embarrassed because there's always people around," Baker said.

Baker added that she even tried one of the machines and thought it was "pretty cool."

Rec Sports lets students test exercise equipment

By Jennifer White
Staff Writer

This past week students have been exiting the University Union with perspiration on their cheeks.

What he got instead was a long-run around as a "comedy of errors."

We regret that it happened." Jankovitz said that although they were aware of a student who was getting lost, they didn't know what his name was or how to reach him.

She stressed the point that the program acts as a referral, because the volunteers aren't counselors.

"We would have advised him on a variety of options," said Jankovitz. "If he wasn't comfortable with AA, then we would have sent him somewhere that could meet his needs."

Since then Jankovitz has taken steps to prevent people from getting lost.

Educators are now advised to ask if someone else can help them, because often people come in asking for specific educators.

"Our ultimate concern is that the student has the information that they need," Jankovitz said.

"If there is a problem we want to fix it," she said. "We want to know how we can do better."
Presidency should be split to four positions
By Scott Kipp

Economic indicators up. Political indicators down. I've seen it before. Especially in recent Reagan years, the economic data may kick-start right before an election. Campaign issues are then dominated by the incumbent government is a logical step for the government to stay in power. I wish George Bush was also Mr. Subliminal on his trip around the Pacific Rim. He would have said, "The reason for my trip is JOBS, JOBS, JOBS, (mine)." Can you blame the president? I think not. The prolonged problems of our government are inherent weaknesses from its earliest days that need to be cured.

Back in the 1700s, the Founding Fathers saw the corruption of power. They decided to divide power into three branches. They devised checks and balances that would distribute power and thus prevent a single leader from gaining too much control and corruption (S&L) to a degree that we now have. The Constitution is the answer to the threat of corruption. The Founding Fathers were not acquainted with mass media blitz, big party politics and nuclear weapons, so they could not design the government to meet these demands. The Founding fathers left these adjustments for us.

One adjustment that is long overdue is that of the executive branch. The executive branch should be divided into four divisions. Every president of every division would be the Head of State, Commander in Chief, Economics Executive and the Progress Prophet. These divisions would break down the current job of presidency in manageable pieces. These divisions would balance each other's represented super-hero status of the one person in control of the nation.

A has been a description of the function of each division. The Head of State would be the spokesman for the four divisions of the executive branch. They would function as the President does in Britain or as Ron Paul does in Britain or as Ronald Reagan did. Beauty and chutzpah (not Buchanan) will be the prerequisites for this post. The President must be a team player, capable of being a beauty queen in a beauty pageant. The President must also have an impenetrable background that can be inspected with a fine-toothed comb and pass without a hair out of place (not Clinton). This sovereign must bestow honor to the populaces and be a model to which a commoner can aspire.

The Commander in Chief is required to guard the nation against invasion and protect our national interest. Since the Russians could militarily control much of the Caucasus and the Canadians have the Mackenzie, this division should be able to defend our borders easily. To protect our national interests, the Commander in Chief (C.B.) would have to understand the clandestine world of intelligence (gun and drug smuggling). The Economics Executive (not G.B., maybe Tsengpan) would set policies on the economy. The executive would need to look for long-term solutions and goals. The Progress Prophet would set the quick fixes (tax breaks). This post would be important to the world progress since it is economically and politically powerful. I saved the best position for last. The Progress Prophet (maybe Jerry Brown) will be in charge of moving the nation in the forward direction. This executive would need the insight to see solutions to societal problems as well as envision future problems. To successfully deal with all situations, knowledge and wisdom would be required.

To increase knowledge, the progress division would oversee education and research. This division would also need to work on problems such as the welfare system, the environment and health care.

Each division ponders to the needs of the right and the left. These divisions should reflect the four main aspects that the presidency currently entails. All divisions would have to deal with affairs on the national and international level. These leaders and their cabinets would have to work together in a unique department of national affairs. This bureaucracy could not get the best of them.

As the nation progresses toward the national election, it is interesting to see the unbalanced, unbalanced, unbalanced, unbalanced national interest. Of course, one of the presidential candidates will meet about one quarter of the current requirements of the presidency. In God we trust.

Scott Kipp is an electronic engineering senior.
Poly shows why its ranked No. 8

By Geoff Seratti
Staff Writer

Despite playing their first three games on the road, the Cal Poly Mustangs men's and women's soccer teams have compiled a perfect 9-0-0 record and are sitting atop their respective conferences and the nation's polls.

The Mustangs are ranked No. 8 in the women's division of the NCAA Division II coaches poll released Tuesday. The men's team is No. 6 in the men's division.

"It's just a money thing," said Chris Tennberg, the Mustangs' No. 8 ranked men's soccer team's midfield enforcer. "First of all, we have the talent to live up to that billing, but I think the team also has the desire to want to do that."

The Mustangs haven't played at home because they have been awaiting completion of a new stadium, located directly behind the Foundation warehouse.

Boyer said the stadium is 95 percent completed and is expected to be ready for the Mustangs' first home game on March 21 against Cal State San Bernardino.

Boyer said the team isn't bothered by all the traveling because Cal Poly travels like that every year. Most of it is done on weekends, so players aren't taken out of class, he said.

The pitching staff has done very well for the Mustangs. Boyer said, with a combined earned run average of 3.1.

Junior Julie Rome leads the staff with a 6-0 record and 27 strikeouts in 38 innings.

Sophomore Tricia Wyss' record is 3-2 and leads the team with a 4.90 ERA.

Hitting-wise the team has no players batting over .300, but Boyer said the difference between this year's team and other years is that every player hits fairly consistently throughout the line-up.

The team batting average is .275, but Boyer isn't concerned.

"In 13 games we've outscored our opponents 52-14, so regardless of batting average, we're getting the job done as far as getting runs across the plate."

The team is extremely fast, Boyer said, as they have stolen 14 bases in 17 attempts.

Locals to surf with the best

Pro surfers, bodyboarders invade Pismo Beach for chance at $20,000

By Glenn Policar
Staff Writer

A handful of local surfers and bodyboarders will do battle with some of the world's best this weekend in Pismo Beach.

More than 150 competitors will take part in the $20,000 Pro Surfing Tour. This is the second stop on the Bud U.S. Pro Surfing Tour.

Formerly the Professional Surfing Association of America (PSAA), the Bud Pro Tour is returning to Pismo for the first time since 1987.

"It's a good location," said Robbie Meistral, Bud Pro Tour contest director.

The tour has traveled to Hawaii, Puerto Rico, Florida and Texas. However, Meistral said that the 1992 tour will exclusively be in California.

"It's just a money thing," Meistral said.

Mike Balzer, staff photographer and public relations director, said that the decision not to leave the country was a sensible one.

"Keeping the tour here (in California) makes it more economical and cost effective for the competitors," Balzer said.

Pismo Beach local Walter Cerny, who is seeded into Friday's main event, will group with some of the nation's top surfers.
We give credit where it’s due.

New graduates are critical to the success of Household Credit Services. That’s why we established the Management Associate Program (MAP). It’s the quickest way to turn your degree into solid work experience, while making wise decisions about long-term careers in the growing field of financial services.

MAP offers you the chance to see the inner workings of different business units here at Household. It’s a great way to gauge your aptitude, find your area of interest, and earn a good salary. Upon completion of the program, you’ll be ready for a rewarding opportunity with Household Credit Services, one of America’s leading credit card issuers. A company known for its environment of innovation and support.

On-campus interviews will be held on Monday, April 13th.

For the July program, Household is particularly interested in students about to earn an Accounting, Economics, Financial Management, International Management, Management, Management Information Systems, or Marketing Management degree. Visit the Career Planning and Placement Office now to sign-up for an interview. If your schedule doesn’t allow for an on-campus interview, send your resume to Household Credit Services, P.O. Box 80041, Salinas, CA 93912-0041. An Equal Opportunity Employer.

When you think of high quality personal computing products with staying power, you think of Microsoft. We wrote the book on operating systems with MS-DOS. Now, Microsoft Windows graphical environment version 3.0 is fast becoming the interface of choice throughout the world. Products like Microsoft Word, Excel and Works, to name a few, have stood the test of time...and we're working on revolutionary ideas right now that will become tomorrow's software classics.

Our best-selling products don't stay on the shelves for very long. They're the pride of our top-line team of software professionals.

Your challenge is to use the latest in software development tools and methodology to design, develop, and implement testing software and test cases. Contribute to product design by reviewing specifications and defining problem areas. Troubleshoot software bugs to find faulty source code; recommend and implement changes. Design software on 80386, 80486, and RISC-based machines that are connected to XENIX*, MS-DOS, and OS/2 file servers. Work as a team member on projects such as operating systems, networks, compilers, personal and business applications software, graphical interfaces, handwriting technology, and multimedia. Microcomputer programming experience is necessary.

You'll find that Microsoft is a company like no other. No suits or ties here. No corporate red tape. Only the freedom to be yourself. To do your very best...creatively, energetically and wholeheartedly.

When you realize that your work can directly impact the personal computer technology of the future, you'll think about long-term plans.

If you are pursuing a degree in Computer Science, Math, Electrical Engineering (with software emphasis), Physics or a related discipline, we'd like to talk with you at our On-campus Interviews.

We are an equal opportunity employer and are working toward a more culturally diverse workplace.

Microsoft

On-campus Interviews for
Co-op Software Design Engineers in Test Development
Wednesday, April 22, 1992

Resumes are due at the Co-op Office by noon on Monday, April 13, 1992.
See your Co-op Office for details.
