Winter weather:
Sunny, dry days;
cold, freezing nights
Weather-cycle siblings bring different effects

By Andrea Parker
Mustang Daily

Thanks to La Niña, El Niño's little sister, the umbrella may be staying in the closet with those new Christmas ornaments.

It's going to be a warm winter with less rain than normal, said Gary Ryan, a meteorologist for the National Weather Service in Oxnard. "Temperatures should be substantially above normal for the rest of the winter," Ryan said.

La Niña is the cold counterpart of El Niño. Warming of the surface temperature in the tropical Pacific brings about El Niño's storms. La Niña follows right behind when the surface temperature cools to below normal.

La Niña's weather patterns have pushed the jet stream further north, taking the cold and wet storms with it. The resulting dry air, combined with the offshore wind flow, causes big temperature ranges like in a desert -- warm in the day and cold at night, said KSBY meteorologist Sharon Graves.

Though it is stormy on the coast, inland cities, such as Fresno, will experience colder than normal winter, said Ryan.

According to Graves, San Luis Obispo is not going to get rain any time before mid-January. Weather predictions show below normal rainfall for January through March, she said.

Though La Niña won't yield much rain, Ryan said this winter will not bring about a drought. Last year's unusually high amounts of rain from El Niño left a large supply of ground- and surface water for this year. According to Ryan, one dry year alone will not cause a drought situation.

"If we get two back-to-back dry winters, then we can start talking drought," he explained.

Last year was indeed a wet year. Average yearly rainfall in San Luis Obispo is 23 inches. Last season's wet season brought in a total of 88.58 inches, 156 percent of the normal overall. During the first half of the year, January through June, El Niño soaked 213 percent of the normal rain total for that period. But since July 1, when La Niña began, San Luis Obispo has seen only 382 inches, 47 percent of the normal rainfall.

"Though January 5 last year, San Luis Obispo already had 12 inches," Graves said.

Ryan said this transition from El Niño to La Niña was "one of the shortest changes ever."

Last year El Niño caused the tornado that damaged several houses along Stafford and Kentucky streets. Residents don't need to worry this year. San Luis Obispo should not experience such an intense storm from La Niña.

"El Niño tends to give more energy with storms, because the water is so

SLO County, FEMA work to prepare for natural disasters

By Burt McNaughton
Mustang Daily

The Federal Management Agency urges California's communities to become more resistant against natural disasters.

"We have a very unique state," FEMA spokesperson Ana Marcelo said. "It has just about every kind of disaster risk imaginable. We have the largest population, we're the most diverse in terms of culture and geography."

In San Luis Obispo County, FEMA assisted with infrastructure problems caused by the rain of El Niño.

"Disaster Assistance goes directly to the victim," Marcelo said. "Although it could take years for damage to be repaired."

The goal of FEMA is to reduce the loss of life and property caused by natural disasters.

In 1997, FEMA created a program called Project Impact. This project was designed to help communities take the necessary steps to resist natural disasters. In a little over a year, Project Impact grew from seven pilot communities in seven states to almost two communities in every state.

Project Impact gives monetary

ABOVE: Last May, El Niño dropped a tornado that ripped up trees and damaged houses on Stafford and Kentucky streets in San Luis Obispo.

LEFT: This year, La Niña is bringing warm days and cold nights with little to no rain. Hikers enjoy the weather by trekking up the trail on Bishop's Peak in San Luis Obispo.

Low temperatures freeze county crops

By Chris Hoffman

December brought record-setting lows to California agriculture

Cal Poly experienced one of the coldest winters in years while most students were home for the holiday break. According to KSBY meteorologist Sharon Graves, regional temperatures were recorded in the 20s at night, causing the destruction of crops throughout San Luis Obispo and much of California.

"Starting on Dec. 22, when the temperature really plunged," Graves said. She said Cal Poly reported a loss of 22 degrees on Dec. 23, and the San Luis Obispo Airport recorded 16 degrees the same night."I believe that was a record," Graves said.

Metronologist Gary Ream, from the National Weather Service in Oxnard, said the lower temperatures at Cal Poly during the cold snap were on Christmas Eve with 22 degrees recorded. Ream said Cal Poly's all-time cold record was in 1990 with 17 degrees.

"The cold snap, said Graves, was a condition known as an "Arctic Blast" or "Polar Express." It was caused by high-pressure ridge that moved north into Canada and diverted the jet stream, bringing cold wind to blow from near the North Pole into California.

The arctic air mass just dropped in," she said.

Graves said that snow was even reported in some northern parts of San Luis Obispo County, including Santa Maria, Templeton and Porterville, though not more than half an inch fell, and it melted quickly.

The cold, however, was enough to cause damage to local and state-wide agriculture. Preliminary reports estimate $591 million in crops were lost throughout California because of the freezing temperatures. The cost of saved oranges — one of the affected crops — has already increased from 99 cents to $1.49 per pound at San Luis Obispo Lucky grocery stores.

Robert Hopkins, deputy agricultural commissioner for San Luis Obispo County, said that the county is still assessing the losses, but avocado plants were hit the hardest. He estimated that 45 percent of the 1999 crop will be lost because of the freeze, totaling $3.9 million.

He said the county had better luck with citrus crops, with a loss of only 7 percent.

Cold nights increase gas, electricity costs

By Andy Castagnola

Cal Poly's heating bill may drop as much as the temperature this winter, but off-campus residents are seeing red.

The new Utilidor system, installed last academic year, will cut campus heating costs significantly, said Ed Johnson, energy and utility manager for the Facilities Planning department.

Utilidor converted Cal Poly's energy generators from steam boilers to hot water boilers. During 1997-98, Cal Poly spent more than $1 million for gas and other chemicals to heat on-campus buildings. For the first half of the 1998-99 fiscal year — July to November — Johnson said gas costs decreased 21 percent.

Stop kidding yourselves

It's not that I'm not a big fan of the holidays, it's just that I have a problem with some of its practices. I love the hot bread, the champagne and spending time with friends, but when it comes to people sending Christmas letters and making New Year's resolutions, I'm against it.

Most of the Christmas letters my family received seemed to be written by people who use English as a third language. Aside from the content being more boring than a 24-hour ride home from Utah, most seemed to invent grammatical rules as they went. Sentence fragments were rampant.

The quintessential opening to all holiday letters is, "Wow, what a year! Can you believe it's already over?" Yes, I can believe it's over and so wish your letter was too.

Next, the letters ramble on about the many accomplishments of all the family members. Usually though, these people are so insecure that the best they can conjure up is stuff like, "Little Johnny colored inside the lines in his color book and made a new friend, all in the same year! We're so proud!"

Christmas letters are for people who make no effort to speak to you for an entire year. And guess what? Two pages of shoddily written letters will not be an effective means of maintaining an open line of communication and keeping friendships intact. Do us all a favor, just send a photo, and maybe some cookies.

Now on to my other holiday gripe. People who make New Year's resolutions practically admit they will never make them. Making a resolution is shockingly absurd because these people know very well they will never attempt to carry it out. But for argument's sake, let's see if a few brainwashed souls do actually make a resolution and begin the journey to the land of self-improvement. Don't look now, but they're only defining the inevitable. The most popular make people make is the resolve to give their keys butt of the sofa to stuff all their holiday pounds at the gym. Once at the gym, snack, dah in a foreign world of self-awareness and sweat. These people are like fish out of water, incapable of discerning the difference between a barbell and a mushroom train. You know you've seen them. They're the ones hugging around the bench with a "dear in the head lights" kind of look. Just what do they expect to accomplish without even attempting physical activity? After a confident 20 minute workout they return to the safe haven of their doughy relatives unable to understand why their hips hurt when they're sure they worked their chest. Now excuse me so I can try to run brand new running shoes and get to work on next year's letter.

Alan Dunton is a journalism senior who refuses to give in to the contentless, กร的 and a new friend, all in the same year! We're so proud!"

A month of fasting

Why are thousands of Americans and about a billion people around the world abstinuing from eating, drinking, smoking, and sex from dawn to sunset this month? They are Muslims who are fasting during the holy month of Ramadan, the month of fasting. Fasting is one of the Five Pillars of the religion of Islam and one of the highest forms of Islamic worship. Abstinence from earthly pleasures and curbing evil intentions and desires is regarded as an act of obedience and submission to God as well as an atonement for sins, errors, and mistakes.

Muslims around the world started their fasting in mid-December, this year. The Islamic calendar is based on the lunar cycle. The month of Ramadan is the ninth month and begins with the sighting of the new moon. The fasting period ends upon the sighting of the next new moon, which occurs after 29 or 30 days. Ramadan brings our emotional excitement and religious zeal among Muslims of all ages. Though fasting is mandatory only for adults, children as young as eight willingly observe fasting with their elders. Children look forward to the excitement of missing the moon and eating special meals with their families. Adults appreciate the opportunity to double their rewards from God and seek forgiveness for past sins. All feel a particular closeness towards their Creator and amongst their family and friends.

Muslims have to change their whole physical and emotional selves during these 30 long days of fasting. A typical day of fasting begins with getting up around 4:30 a.m., and eating before the fast begins, about 5-12 a.m. As dawn breaks, the first of five daily prayers (Fajr) is offered. As the day proceeds, fasting Muslims are constantly bombarded with messages from their stomachs that it is time for break­fast, snack, lunch, and so on. Each time, Muslims reminded themselves that they are fasting for the sole purpose of pleasing God and seeking His Mercy.

Throughout the day, Muslims are encouraged to go out of their way to help the needy, both financially and emotionally. They believe that a reward earned during this month is multiplied 70 times and more. For this reason, Ramadan is also known as the month of charity and generosity. To a Muslim, fasting not only means abstaining from food, but also refraining from all evil and vice commited by us, consciously or sub-consciously. It is believed that if one volunteers to refrain from lawful foods and sex, he/she will be in a better position to avoid unlawful things and acts during the rest of the year.

Fast is broken at Sunset. Prophet Muhammad (peace be upon him) recommended breaking the fast with dates. Muslims are urged to invite others to break the fast with them. Just after breaking the fast, and before dinner, Muslims offer the fourth of the five daily prayers, which is called the Mudrib prayer. They offer the second and third prayers during early and late afternoon, respectively. After dinner, Muslims go to their houses of worship, called "Mosques," to offer the Isha prayer, which is the last of the five daily prayers. The day ends with a special voluntary prayer, the Tawaf, offered by the congregation reciting the Holy Qur'an, the holy book of Islam.

After 30 days of fasting, the end of the month of Ramadan is observed with a day of celebrations, called Eid-al-Fitr. On this day, Muslims from around the vicinity gather in one place to offer a prayer of thanks. It is traditional to wear new clothes, visit friends and relatives, exchange gifts, eat delicious dishes prepared for this occasion, and wait patiently for the next year.

Besides offering enormous spiritual blessings, fasting also renders numerous medical and psychological benefits to its believers. Fasting helps humans refrain from eating, drinking, smoking, and sex from dawn to sunset this month. It is believed that if one volunteers to refrain from lawful foods and sex, he/she will be in a better position to avoid unlawful things and acts during the rest of the year.

Fasting helps one to experience how a hungry person feels and what it is like to have an empty stomach. It teaches one to share the sufferings of the less fortunate. Muslims believe that fasting lends one to appreciate the bounties of God, which are usually taken for granted—until they are missed.

U.S. coins bad idea with baby

By Jessica Weeks
The Lantern (U-WIRE)

Susan B. Anthony, you're outta here. A new lady — this time with a swaddling infant from other coins by touch, will feature hardy new U.S. one dollar coin is scheduled to and worn-out dollar bills? Your Snickers-craving America in their 19th-century expedition.

But the fun doesn't stop there. Newspapers report that Sacajawea will be depicted dutifully toting her infant son, the first baby to ever grace American currency. The coin with new image will replace the flopped 1979 dollar coin, which depicted the unremarked and childless Susan B. Anthony, a 19th-century leader of the women's suffrage movement, who was arrested for darning to vote in the 1872 election.

So what's my point, you ask? Shouldn't I be delighted that the new coin will feature a minority woman who is able to balance "work" with family? (We'll just forget the fact that she was the teen-age slave wife of a polygamous man whose wife was used as a human bargaining tool against hostile rival tribes.) Yes, in a sense I am delighted. Right now, we've got enough dead white guys adorning our national currency, and Sacajawea was an admirable person and an excellent choice for the new coin. But because the images we choose to depict on our country's coins and bills are symbols of our nation's values, we should identify what these images say about our culture. I wonder, is the inclusion of Sacajawea's baby really necessary, and what does it say about the way Americans view women?

Take a look in your pocket. Not one regularly-used coin depicts a woman. And not one of the many depictions of men include an infant. So why, when we finally create an "important" coin featuring a woman, does the first baby to ever grace American currency accompany her?

It seems that the underlying message here is one which many women have been battling for centuries that women's most important and valued purpose is to produce and care for children. Sure, Sacajawea can lead an expedition across the Louisiana Purchase, but only if she looks after her baby first. An ironic message from a government that makes such a task impossible for modern women by refusing to force employers to provide adequate on-site child care. And where's the dad, anyway?

Don't get me wrong. Motherhood is sacred and beautiful, and being a mother is a job that I applaud. But being a father should be seen as just as sacred and beautiful, something that the symbols we put on our currency seems to miss. According to anti-abortionists who support spousal notification laws, fathers are an important part of having children.

In this case, I agree with them. It's not that I do not rejoice at the news of a strong and competent woman who can both lead a team and raise a child, and it is not that I object to the image of mother and child on a coin. But I'm curious. Why doesn't George Washington have a couple of toddlers perched on his shoulder? Why doesn't Abraham Lincoln have a little girl tugging at his ear? Why has Sacajawea been chosen to bear the burden of motherhood alone?

Jessica Weeks is a sociology sophomore from the University of Ohio.

Registering for classes: the Cal Poly Myth

Your heart beats steadily with anticipation, you hold your breath, but soon disappointing words fill your ear. "The section you have requested is full — no other sections are available." After hearing this message, average Cal Poly students have two choices: they can CAPTURE another class which they probably don't need as much as the first one, or they can try and "crash" their original choice. However, the second option may not be as easy as it seems.

On the first day of an upper-division speech communication class there were probably 20 people trying to crash. The class limit is set at 24, nearly twice as many students wanted or needed the course as there was space for. To help decide which hopeful students would be able to enroll in the class, the instructor begins taking roll. Then, he did something that I had never heard a professor do, he explained the system he uses to decide which students are able to enroll in the class.

The professor said the first students to add would be those on his already established waiting list, next would be those in concurrent enrollment or extended education programs, then graduating seniors, and lastly all other students in order of class standing.

A girl a few rows over from me told a friend that if she didn't get this class, it would delay her graduation by several months, and I am sure that most of the other graduating seniors had similar concerns. This bothered me greatly. It doesn't seem fair that people have to spend extra time at Cal Poly because they can't get the class or classes they need to graduate. I imagine there is some magical formula school officials use to determine how many class sections of courses are offered each quarter. However, I wish the makers of the formula would sit in on the first day of a random sampling of Cal Poly classes and see if their formula is (or is not) working.

Can Jane Doe get the class she needs to graduate? Can John Smith enroll for the prerequisite he needs for his other classes? I wish the formula makers could remember how much money it takes to educate John Smith or Jane Doe and that maybe for all Cal Poly students or their parents have enough spare change laying around for a needless extra quarter at Cal Poly. I realize these magical policy makers might say students are given three senior priority quarters so they can get all the classes they need the quarter before graduation. However, they don't understand that because of our rotating priority system, students in the same name bracket as myself did not have enough extra points to get classes like SPC 201 or ENGL 215 until this year. For most, these classes are prerequisites to nearly all upper division and sequence courses in my major and certificate program.

I had to use a senior priority to get them my sophomore year so I could continue making progress toward my degree.

Maybe I am missing something, but students should not have to use their senior priority registration before they are seniors. I believe people setting the amount of sections offered for a course need to be more in touch with the student demand for the course. An English teacher told me she was aware only a small portion of the students needing to take ENGL 114 are actually accommodated.

Why is this allowed to happen? If professors (and I am sure many students would agree) admit that there is a problem, those with the power to change things need to do so.

Lauren Nowenstein is a journalism junior.
Sniper who planned shooting baffles police

RENO, Nev. (AP) — Investigation and psychology aren't sure what to make of a 22-year-old film buff's claim that his arrest for a shooting rampage on Interstate 80 folded a plan for a cross-state killing spree intended to mock American violence.

"I can honestly say I don't have a clue on this man," Dr. Ole Thienhaus, chairman of the psychology department at the University of Nevada, Reno, said Thursday.

Christopher Lee Merritt, of Manhattan, Mo., was being held without bail on eight counts of attempted murder, assault with a deadly weapon and other charges.

Armed Monday night during a routine traffic stop in Las Vegas, he has continued to be the sniper who opened fire on the interstate earlier that day on the western outskirts of Reno. One man was wounded in the chest and five other vehicles were damaged.

The interstate was closed for five hours and school children were kept indoors while more than 100 law officers searched the Sierra foothills.

Merritt originally told police he planned to shoot motorists so they would crash and he could rob them.

But in interviews with reporters beginning Tuesday night, he has told a consistent story of his plans to shoot more than 150 people through the country — a spree he thought would make some kind of bizarre "satirical" statement about America's growing appetite for violence in popular books and films.

"He changed his story about this crime — from a very stupid scheme to a mass murder spree," said Dr. Thienhaus, who has examined Merritt but is prohibited from discussing any details.

The county prosecutor touched off a controversy Wednesday when he served search warrants on three Reno television stations and the Reno Gazette-Journal to collect tapes and notes from interviews the station's lawyer threatened to file in a lawsuit in a letter to Gammatck on Thursday, and the tape was returned in the mail.

Washoe County District Attorney Richard Gutierrez "asked as to its keeping in a safe place so he can subpoena it. I said that was fine with me because it'll file a motion to quash the subpoena," attorney Kevin Doty of Reno said Tuesday.

The newspaper refused to turn over its notes, agreeing to lock them away until a subpoena could be served. KRNV-TV sent a copy of its interview to a justice of the peace and KTNV-TV gave a copy to its attorney.

Merritt told The Associated Press in an interview at the jail on Wednesday that his dissatisfaction with the country was the thrill of killing, "for my own enjoyment ... my own amusement." He said he picked Reno, Las Vegas and Gallup, N.M., to begin his shooting spree because violence in those places has been "glamorized and romanticised" in books and movies.

"The popular American has chosen to feed off of whatever violent stories. Either they read the story or vicariously live through it or they read the story and they feel elated in being able to afford in this country," he said.

The American public seems to set in dual standards about what is acceptable, condemning real-life killers while glamorizing murderers in films, he said.

Nevada Focus: Airport program pits Mammoth against Tahoe

SOUTH LAKE TAHOE, Calif. (AP) — Can Lake Tahoe become the West Coast's premiere ski area by 2002? A group of investors hopes to do just that by basing a program to bring a direct flight from Los Angeles through the Eagle County Airport via direct flights.

With this program in place, an airplane in Vail increased from 210,000 seats per season to 320,000 seats.

Now Perlman is hoping to work the same magic at Mammoth, just southeast of Yosemite National Park and a three-hour drive from South Lake Tahoe.

"We don't really consider ourselves a competitor with Lake Tahoe," says Perlman, who lived and worked here for a winter after graduating from college. "That's not our focus. Tahoe is a different sort of vacation destination."

But Mindy Johnke of Oasis Aviation, the fixed-base operator at Lake Tahoe Airport, says, "I know Rob Perlman, and he doesn't think small.

"If Mammoth gets air service, of course they will be a major competitor," she adds.

"The emphasis on my eye are the resorts such as Vail, Telluride and Mammoth, and it is a critical time for Lake Tahoe," Perlman said. "These other resorts are making huge strides and we need to keep pace. At this great shutdown is not much of a threat. But after what Perlman did at Vail ... we should be worried."

Perlman instituted a program which included working with American, Delta, Northwest, United, Continental and America West airlines on scheduling and flight promotion.

"I saw my mission as finding a way to promote awareness of the Vail Valley," Perlman said. "That awareness did grow, by 210,000 (airline) seats."

WEATHER

continued from page 2

eviving even warmer weather than what is expected for the rest of the winter. Ryan says this is due to a high pressure system that should last through most of the rest of this month.

The Climate Prediction Center shows sea surface temperatures returning to normal by next year, resulting in closer to average winter conditions, and Ryan.

Freeze

percent of lemons and an unbelievable 100 percent of tomatoes, which reported that 75 percent of navel oranges were damaged.

Hicks also said San Luis Obispo County lost $850,000 in cut flowers and container plants, and $375,000 worth of vegetables, such as peas and leaf lettuce.

Although some produce-packing houses in other parts of the state have reported harvests because of the freeze, Hicks said he is "not aware of any" layoffs occurring in San Luis Obispo County.

As for Cal Poly itself, crop science department head Paul Fournier said agriculture losses were minimal.

"We were pretty lucky. The only thing we really lost was our bananas. We're only talking 20 plants," he said. 

SANTA BARBARA is one of two California communities participating in Project Impact. The community of Santa Barbara took the necessary steps in becoming a disaster resistant community. Some of these steps include reducing the chance of floods and land use planning.

Disaster relief for 1998 accounted for approximately $2.7 billion of FEMA's funds. Around $210 million went to the victims of California's flood last February.
NEW YORK (AP) — The NBA wanted no time Thursday trying to put an ugly lockout behind it, pledging to lure back fans with cheaper seats and improving its facilities for a potential season.

The NBA Board of Governors unanimously approved the settlement Wednesday. It now heads to the referees, who have so far said they would not report to work until they receive a settlement that reflects their demands.

"We're going to make sure that everyone has a chance to be able to get to work," NBA deputy commissioner Adam Silver said in a news conference where he was joined by union director Billy Hunter and deputy commissioner Adam Silver.

"Most important to us is getting the league back up and running," Hunter said.

Silver said the league hopes to start the season Feb. 5 and play about 50 games.

Each team will play two exhibition games before the regular season begins one week — and admission will be free. Premium sections also will be open to the public.

Season ticket holders now get two regular-season games for free and the regular-season game packages will be priced at $10 to lure families to arena.

 Seats in large-market arenas like Los Angeles and New York will anywhere from $25 to $1,250.

"We have some winning back of fans to do, and we're going to do it," Silver said.

Season ticket holders now get two regular-season games for free and the regular-season game packages will be priced at $10 to lure families to arena.

 Seats in large-market arenas like Los Angeles and New York will anywhere from $25 to $1,250.

"We have some winning back of fans to do, and we're going to do it," Silver said.

Silver said a news conference where he was joined by union director Billy Hunter and deputy commissioner Adam Silver. "Most important to us is getting the league back up and running," Hunter said.

Silver said the league hopes to start the season Feb. 5 and play about 50 games.

Each team will play two exhibition games before the regular season begins one week — and admission will be free. Premium sections also will be open to the public.

**Cal Poly athlete of the week**

Mustang Daily

This week’s athlete of the week honor goes to sophomore Jabbar Washington.

The 6-foot-4-inch swingman scored 21 points in Saturday’s loss to UNLV. Washington made seven of 12 field goals and hit seven of nine free throws.

He also grabbed three rebounds and made three steals in the game.

Washington is currently third in the team averaging 13.3 points per game, which also is fourth in the Big West. His 2.6 assists per game rank him nineteenth while his 4.8 rebounds per game place him twenty-second.

Washington was a Big West Conference All-Freshman team selection last year.

Honorable mention this week goes to four swimmers:

Freshman Matt Palante and Kyle Weidridge and senior Eric Wyles and Nate Moore led the Mustangs to a first place finish at the U.C. Irvine Invitational Saturday. Palante finished first in the 200 Fly while Weidridge was the top finisher in the 200 Back. Wyles came in first in the 200 Breaststroke and in second in the 100 Breaststroke. Moore finished second in the 200 IM and in the 1650 Free.

**SCHEDULE**
