Coalition to focus on sustainability

Several CSU and UC schools will meet at Cal Poly today through Sunday to support sustainable energy practices

Erick Smith
MUSTANG DAILY

A statewide coalition comprised of six to eight colleges from the California State University and University of California systems will converge at Cal Poly today through Sunday to gather support for a movement to implement sustainable energy practices at all public universities in California.

Students within the California Student Sustainability Coalition set up the convergence to coincide with a meeting between a statewide committee comprised of nine members, two of which are students, which will occur on Saturday.

The committee will make a recommendation to the board of trustees from the CSU and UC schools which will then meet in July to make a decision whether or not they will adopt a statewide plan to move all the universities toward the use of cleaner and renewable energy sources such as solar and wind power.

Writing contest named after English professor

Al Landwehr has taught fiction writing and literature at Cal Poly since 1970

Rebecca Laman
MUSTANG DAILY

In recognition of longtime English professor Al Landwehr and his dedication to Cal Poly’s creative writing students, Cal Poly has named its annual creative writing contest the Al Landwehr Creative Writing Contest.

"Landwehr created the contest 35 years ago in a way to highlight the best student creative writing at Cal Poly," English Professor Kevin Clark said.

The announcement was made Saturday during Open House at the annual reading by this year’s student prize winners.

Landwehr began teaching at Cal Poly in 1970 and retired last year. A teacher of fiction writing and literature, he won the university’s Distinguished Teaching Award in 1998.

"He gave the contest extra zing by finding prize money for the winners in fiction and poetry. Various donors, such as the Michael Gamber Memorial Fund and Knowlton Brothers Fine Furniture in Nipomo, have contributed to the fund. "Al Landwehr was my mentor here," Clark said.

Kevin Clark & Al Landwehr

Clark spoke of a moment when he ran into Landwehr on campus in his first years of teaching at Cal Poly.

"I said, ‘Al, where are you going?’ And he said, ‘I’m going to teach Conrad’s Heart of Darkness to Landwehr on campus in his first years of teaching at Cal Poly.

‘And he then said to me, ‘You know, somewhere out there, there are people digging ditches. We get to teach our favorite stories.’"

"As you can see he had great perspective, and I soaked some of that in," Clark said. For nearly four decades, Landwehr’s short stories have been featured in various literary publications.

College students from all over California will meet at Cal Poly today through Sunday to discuss sustainability. Plans for the weekend include workshops, training seminars, a tour of Paly Canyon and skill-sharing events.

"The goal of these convergences is to energize the movement by giving students a chance to get out of town and have fun by meeting with other people from across the state who want to accomplish the same thing," committee member and architecture engineering student Tyler Middleorgh said.

The reason behind the convergence is to create a student movement which unites students and pushes for the use of renewable energy in all of the state’s public universities. The group plans to set up a strategy plan for the remainder of the time between this upcoming student movement and the next one. See Sustainability, page 2

Environment

Bush opens national forest areas to logging

The Bush administration has opened up 58.5 million acres of land that had been put off limits by President Clinton

John Heidprin Association Press

WASHINGTON — The Bush administration, in one of its biggest decisions on environmental issues, moved Thursday to open up nearly a third of all remote national forest lands to road building, logging and other commercial ventures.

The 58.5 million acres involved, mainly in Alaska and in western states, had been put off limits to development by former President Clinton, eight days before he left office in January 2001.

Under existing local forest management plans, some 34.3 million acres of these pristine woodlands could be opened to road construction. That would be the first step in allowing logging, mining and other industry and wider recreational uses of the land. Under proposed rules, new management plans have to be written for the other 24.2 million acres before road building can commence.

Governors have 18 months to submit petitions to the U.S. Forest Service, challenging either the old plan to stop development, or calling for new plans to allow it.

Agriculture Secretary Mike Johanns said in announcing the rule that his agency "is committed to working closely with the nation’s governors to meet the needs of our local communities while protecting and restoring the health and natural beauty of our national forests.”

The Agriculture Department, which includes the Forest Service, said governors can base their petitions on requests to protect public health and safety; reduce wildfire risks to communities; conserve wildlife habitat; maintain dams, utilities or other infrastructure; or ensure that citizens have access to private property.

The Forest Service, which will review and have final say over the petitions, calls the new process voluntary and is setting up a national advisory committee on the rule. “If a governor does not want to propose changes... then no petition need be

New York City police and other law enforcement agencies surround the British Consulate in New York.

Two grenades explode outside British Consulate

Two relatively unsophisticated explosive devices were set outside the building inside a cement flower box

Justin Glaive
ASSOCIATED PRESS

NEW YORK — Two makeshift grenades exploded outside a building housing the British Consulate early Thursday, causing slight damage but no injuries, officials said. A United Nations analyst found lobbing near-by was being questioned, authorities said.

Officials said it was not clear whether the consulate itself had been targeted. The midtown Manhattan office building houses a variety of domestic and foreign companies.

"We do not at this point have any idea who did it or a motive," Mayor Michael Bloomberg said, adding the explosion was caused by "a relatively unsophisticated explosive device.”

There were no threats or phone calls, see Explosion, page 2
Sustainability continued from page 1 weekend and July, when the trustees will make their vote.

"The most important thing about this weekend is that we can get together and strategize about how we will push the CSU in the direction we would like them to go, and how we can strategically communicate with decision makers so we do not alienate them," Middeldorp said.

Plans for the weekend also include workshops, training seminars, a tour of Poly Canyon and skill sharing events. The CSCS has arranged for guest speaker Woody Clark, author of "Agile Energy Systems: Global lessons learned from the California Energy Crisis" to come and talk with everyone involved in the convergence.

Clark is a qualitative economist who graduated from University of California, Berkeley with a Ph.D. and three separate Masters of Arts degrees. He worked for Lawrence Livermore National Laboratory and focused on fuel cells, hydrogen, storage devices and other environmentally-sound technologies. The SCS is part of a larger, statewide and student movement. Renew CSU, which is dedicated to enhancing student involvement with the CSU faculty, staff and administration to implement environmentally sound practices within the CSU system.

If the board of trustees decides to begin implementing sustainability changes throughout the UC and CSU systems an initial cost will be required. But in the long run, across the state will have the opportunity to save millions of dollars, Middeldorp said.

For further information regarding any of the events for the upcoming weekend visit the Renew CSU Web site at renewcsu.org.

Explosion continued from page 1

he said. The FBI and police were ques­tioning a United Nations employee from the Netherlands who was found lurking near the building shortly after the explosion, law enforcement officials told The Associated Press. The officials, who spoke on condition of anonymity, would not say whether or not the man was a suspect. Other officials, including one from the United Nations, confirmed that police had detained and were ques­tioning an "alibi" with UNSMOVIC, the U.N. commission that was responsible for eliminating Iraq's bio-logical, chemical and long-range mis-sile programs. The officials spoke on condition of anonymity. The United Nations tightened security at its New York headquarters, calling in all its canune units and implementing other measures, U.N. spokesman Stephane Dujarric said. The grenades had been placed inside a cement flower box outside the front door of the building.

After picking together the shrap-nel, police determined the devices were toy grenades that had been filled with gunpowder. Officers estimated that one was the size of a pineapple, the other the size of a lemon. No timing device was used. Police Commissioner Ray Kelly said.

The blasts, which Kelly said hap-pened at 3:35 a.m., shattered a panel inside a cement flower box outside the main entrance of the building. Police determined the devices were toy grenades that had been filled with gunpowder. Officers estimated that one was the size of a pineapple, the other the size of a lemon. No timing device was used. Police Commissioner Ray Kelly said.}

The British consulate is on the 9th and 10th floors, the mayor said. Offices of other foreign diplomatic representatives were checked as a precaution and nothing was found, Kelly said. Security videos in the area were being reviewed, he said.

In London, a Foreign Office spokesman, asked whether British authorities believed the blast was ter-ror-related, said only: "Investigations are ongoing."

"We’re not speculating about whether it’s connected to the election," she added. Calls to the British Embassy in Washington were not returned.

British Prime Minister Tony Blair is seeking a third term in office. With the country’s economy doing well, and the Labour Party was widely expected to win despite anger over his support of the Iraq war.
STATE NEWS

SAN FRANCISCO — Thirteen cargo handlers pleaded not guilty Thursday to charges of stealing mail destined for military service members stationed in Okinawa, Japan.

Two additional workers will be arraigned at a later date and one more worker is believed to have fled to the Philippines, according to the U.S. Attorney’s Office.

WASHINGTON — The Army said Thursday that only one senior officer will be disciplined for failed leadership in connection with the Abu Ghraib prisoner abuse scandal and that more than a dozen lower-ranking officers will face a variety of punishments.

The Army said it demoted Brig. Gen. Janis Karpinski, whose Army Reserve unit was in charge of the prison compound when Iraqi detainees were physically abused and sexually humiliated by military police and intelligence soldiers in the fall of 2003. When photos of some of the abuse became public a year ago a firearm of criticism erupted worldwide.

NEW YORK — To the dismay of gay-rights activists, the Food and Drug Administration is about to implement new rules recommend­ ing that any man who has engaged in homosexual sex in the previous five years be barred from serving as an anonymous sperm donor.

The FDA has rejected calls to scrap the provision, insisting that gay men collectively pose a higher-than-average risk of carrying the AIDS virus.

Critics accuse the FDA of stigmatizin­ g all gay men rather than adopting a screening process that focuses on high-risk sexual behavior by any would-be donor, gay or straight.

IN OTHER NEWS

KENAI, Alaska — Just call him the anchor bandit. Police arrested a man in connection with the theft of nearly $70,000 in moose, caribou and elk antlers stolen from a home.

The man’s name was being withheld pending charges being filed with the Kenai District Attorney.

Police said the antlers were being stored in a 40-foot container at a residence while the owner was in Cordova working on his commercial fishing boat. It looks like sometime during the past four months, the suspect has been haul­ ing away truckloads of the antlers and selling them to area carvers and gift shops, police said.

A friend of the owner noticed the door to the Conex container open on Sunday and saw that much of its contents were gone. He con­ tacted the owner in Cordova, who took the ferry home Monday and contacted police.

Sedro-Woolley Police Sgt. Tod McGillivray questioned neighborhood residents who reported seeing the suspect taking the antlers in as many as four trips in one day. However, the neighbors did not suspect anything until police began asking questions.

McGillivray said the suspect and the owner had been friends several years ago. The 45-year-old owner had been collecting the antlers, some found as seasonal dropped speci­ mens and some harvested through hunting, in hopes of carving them as a retirement vocation in years to come, McGillivray said.

McGillivray said the suspect and the owner had been friends several years ago. The 45-year-old owner had been collecting the antlers, some found as seasonal dropped speci­ mens and some harvested through hunting, in hopes of carving them as a retirement vocation in years to come, McGillivray said.

Lantern Festival brightens Cal Poly’s evening

Chi Delta Theta and Omega Xi Delta will once again host the Lantern Festival in the UU on Saturday. Traditionally, the festival is the Chinese and Vietnamese celebration of the beauty of the moon.

Rebecca Lam
MUSTANO DAILY

The Lantern Festival has been observed in China and other Asian countries for thousands of years, but only in the past couple of centuries has it come to the United States.

Members of Chi Delta Theta and Omega Xi Delta plan to showcase the diversity of the Asian and Pacific Islander cultures and foster a sense of unity throughout the community at The 11th Annual Lantern Festival to be held in the University Union Plaza on Saturday.

"Every year it gets better and better" coordinator Megan Kosaka said. Last year we were able to raise a sufficient amount of money to really help us get prepared this year," Coordinator, Megan Kosaka said.

The festival will feature live performances including a traditional Chinese lion dance, Polynesian dancing, martial arts demonstrations, Filipino and Indian cultural dances, modern hip hop dance routines and singing groups, rock bands and a karaoke contest. Clubs from Cal Poly and the Central Coast will sell Asian food and drinks. The outside community is invited to participate. Local performing groups are part of the evening’s program.

"This year we worked hard to invite as much of the faculty and staff as we could," Kosaka said. "We really tried to put ourselves out there this year," Kosaka said.

Tip #47: Make the Mustang Daily your only paper!
Tan now and pay the price later

Jane returned from Mexico with this great tan, but also a minor burn. It left thoughts of Mexican beaches lingering on her mind ... while she lathers up her tanning legs with aloe and vitamin E. Some people are much more likely to burn than others. The way the sun effects skin depends on the amount of melanin, a naturally-occurring skin pigment, the body produces. People with darker skin produce larger amounts of melanin, so they tan quicker and with less trouble than those with fair skin.

According to the Department of Health and Human Services, tanning is especially difficult for blue-eyed and green-eyed people of northern-European descent, and those who freckle or burn easily are at a much higher risk of developing skin cancer. Very fair-skinned people can get severe sunburns from as little as 30 minutes in the hot summer sun, complete with redness, blistering and peeling. But fair-skinned individuals are not the only ones who suffer from sun damage. Frequent sun exposure is prone to premature aging of the skin, including wrinkles, sags, blotchiness and freckling.

Artificial tanning has increased in popularity, but it is actually more harmful than the sun’s natural rays. For instance, long-wave ultraviolet rays are used in tanning beds because they penetrate the skin deeper into the body. But maybe it’s just our department that we have both the ability and the drive to be engineers and, as a result, people will change their minds by simply saying they are wrong. We must continue to prove that they are wrong. The female engineering students I know are the hardest workers I have ever met. They are determined individuals who recognize that they are a minority although they don’t let it slow them down.

We must continue to be confident that we have the ability and the drive to be engineers and, as a result, people will change their minds by simply saying they are wrong. The female engineering students I know are the hardest workers I have ever met. They are determined individuals who recognize that they are a minority although they don’t let it slow them down.

EMILY WONG

Being a female engineering stu­dent, I was pleased to read Will Brown’s letter in the Daily about the way women are viewed in the male-dominated fields. I would like to point out that men are vastly more predisposed toward drinking beer, watching basketball and fattening up than engineering. It’s surprising to think that we can even make it through the rigors of the engineering programs at Cal Poly since they rarely use their cognitive skills found above the waist.

The reason only that so many more men than women choose to be engineers majors is that they falsely believe that the status that comes with money will attract women. This may be because these individuals have little else to attract the opposite sex.

Women, on the other hand, being more inclined to use their brain when thinking, choose to study something that interests them, which explains why so many nutrition majors are skinny, English majors like to read and theater majors are dramatic, as well as why these fields have larger numbers of women than men.

Additionally, women who do choose to study engineering may have done so in order to be self-reliant and are therefore not impressed by the men in their engineering classes simply because of their ability to bring home an attractive salary. While I agree with Will Brown’s letter in the Daily, I would be much happier to be a domestic goddess than studying not-so-interesting finite element analysis, I realize that these things can wait until college is over if I have financial independence.

ERIN GIBBONS

Mechanical engineering major

LETTERS TO THE EDITOR

People should stop being lazy and live sustainably. I’ll rehab your fossil fuel.

Matt, you failed to elaborate on a third option. You briefly men­tioned this solution, but did nothing to expand on it.

From my view, it’s the best solution, and would be the solu­tion to all of our energy prob­lems. As a whole to society, it would be the easiest way out and it would be a huge step toward sus­tainability.

This option could really be summed up in just eight words: “Stop using so much energy, you lazy bum.”

JUSTIN JUNG

Cal Poly's one and only Hall of Fame tennis player

Brian J. Lambdin, Staff Writer

If you look at the members of the Cal Poly Hall of Fame, there are only two tennis-related members. One is former basketball and tennis coach Ed Jorgensen. The other is former All-American player Dan Lambert.

Lambert had one of the most distinguished careers any athlete has ever had at Cal Poly, evidenced by the fact that he is the only tennis player in the Cal Poly Hall of Fame.

He grew up in Arroyo Grande and in high school, Lambert participated in basketball and track and field. But his best sport was always tennis. His high school tennis teams were so strong that they scrimmaged with the Cal Poly team.

Other reasons convinced Lambert that Cal Poly was the right place to be. "My high school coach had played for Ed Jorgensen, who would be my coach at Cal Poly and it just made sense that I come to Cal Poly," Lambert said.

Once in San Luis Obispo, Lambert quickly became a tennis star as both a singles and doubles player becoming one of the most decorated sports athletes in Cal Poly history. He was a NCAA Division II All-American in singles all four years at Cal Poly and was a doubles All-American in freshman year. His senior season he had a record of 18-1, a career record of 108-16, and was in the final 32 players in the Div. I championship tournament. As a team, Cal Poly was just as good. The team finished sixth, fourth, second and third place during his four years of playing for the Mustangs.

Playing both singles and doubles gave him an all-around game. "I liked playing singles better," Lambert said. "Everybody on the team played both doubles and singles. Our team had six or seven players and everybody played both. Playing both helped you develop two distinctly different sets of shots. It is good for your skill set."

Upon graduating in 1976, Lambert didn’t plan to play tennis professionally, but he got an offer to play on the American Express Challenger’s Tour. He took the opportunity traveling and playing tennis throughout 1977.

"It was not my goal to play tennis professionally," Lambert said. "But I wanted to try it and give it a shot. The tour covered all the western states. I played singles and doubles with my brother as my partner for the doubles matches. I really enjoyed the traveling as much as the tennis."

The year on the tour allowed Lambert to see just what it would take to be successful as a professional player.

"I got to see how many good tennis players there were out there," Lambert said. "And I realized that in order to be successful as a professional it came down to hunger. Who wanted to be there more."

When he sojourned into professional tennis was over, Lambert came back to the area where he had grown up. He taught tennis from 1982 to 1990 when he managed and operated the San Luis Bay Tennis Club in Avila Beach.

"I hadn’t always wanted to do it," Lambert said. "But when the opportunity came up I thought I’d give it a shot."

Cal Poly Hall of Famer Dan Lambert was a Division II All-American tennis singles player the four years he played at Cal Poly.

Cal Poly has won 20 of 25, is 30-14 overall and is vying for the playoffs, after missing last year’s postseason.

Fullerton this weekend, beginning tonight at 6, they will not only be going up against the Big West leader but also the No. 1 team in the nation. The Titans are ranked No. 1 by both Baseball America, No. 2 by the C.B.N. poll and No. 3 by both Sports Weekly/ESPN and the NCBWA. Fullerton swept UCSB last weekend, has won eight straight, is 33-11 overall, 11-1 BWC, and is also the defending national champion.

It’s a familiar story for Cal Poly to be facing a No. 1 Fullerton team. The Titans were ranked No. 1 in two of four polls when they visited in 2003 and won all three games by scores of 11-3, 26-7 and 4-3. Last year at Goodwin Field the Titans won by scores of 3-2, 27-2 and 9-4. Overall, Fullerton has taken 33 of 37 games against Cal Poly since the Mustangs moved to Division I in 1995.

But this Cal Poly team could be better than ones in years past, with the Mustangs a threat to make the playoffs after barely missing them last year. Against Sac. State, Cal Poly outscored the Hornets 32-6 and produced double digits in runs and hits in each game of a three-game series for the first time since May 12-14, 2000 at New Mexico State. Cal Poly is hitting .302 as a team, has hit twice as many home-runs the last two games after batting .157 in the opening series. The Titans have lost two of their last three games.

Beginning tonight, red-hot Cal Poly will host No. 1 Cal State Fullerton, the Big West leader and defending national champ.

MUSTANG DAILY STAFF REPORT

The wins have been plentiful for Cal Poly baseball in recent weeks. Against a lot of second-rate competition, Cal Poly has gone on a 20-5 run. The hot streak started in early March with a sweep of Fresno State. Since then, the Mustangs have lost only one series, sweeping Northridge, Santa Barbara and just last weekend, Sacramento State. It’s helped Cal Poly reach No. 20 in the Collegiate Baseball Newspaper poll.

But now, the crucial part of the season has arrived for the 30-14 Mustangs. The team’s 8-1, second place mark in the Big West Conference will be tested with series these next two weekends, against Cal State Fullerton and Long Beach State.

The first test could be the most difficult. When the Mustangs face...
